## DIRECTING COMMITTEE

DR. HENRY B. COLLINS, Smithsonian Institution, Chairman.

DR. BURTON W. ADKINSON, Director, Reference Department,  
Library of Congress.

MR. ROBERT C. GOOCH, Director of Administration, Library  
of Congress.

Representative, Department of the Army.

Representative, Department of the Air Force.

Representative, Office of Naval Research, Department of the Navy.

DR. A. L. WASHBURN, Dartmouth College, Hanover, N. H.

COL. WALTER A. WOOD, Arctic Institute of North America, New  
York, N. Y.

## FOREWORD

Volume 4 of the *Arctic Bibliography*, like the preceding volumes, has been prepared by the Arctic Institute of North America under an Office of Naval Research contract. The present volume represents the work of the past two years, carried out under the able direction of Marie Tremaine, who has served as Editor and Director of the Bibliography project since its inception. The work of the fiscal year 1951-52 was conducted with the joint support of the Department of the Army and the Department of the Navy. That of the current fiscal year has been supported by the Arctic Aeromedical Laboratory, Alaskan Air Command, U. S. A. F. The Department of the Air Force has also provided funds for printing the present volume.

Volumes 1 to 3 of the *Arctic Bibliography* listed, described and indexed 20,003 publications relating to the Arctic and sub-Arctic regions of America and Eurasia. The present volume, arranged in the same manner, contains 7,627 author entries, numbered from 20,004 to 27,631. A special effort has been made to cover materials published from 1950 through 1952, but earlier works are also included. In the subject fields, medical and biological publications have received special emphasis. The present volume also contains more materials on Scandinavia and Finland than did the first three volumes.

The Directing Committee and Editor wish again to acknowledge the generous cooperation of the Library of Congress in providing working space for the Bibliography staff. Dr. Burton W. Adkinson and Mr. Robert C. Gooch, Directors, respectively, of the Library's Reference Department and Administration, have

continued to serve as members of the Directing Committee and have assisted the work in many ways. Finally, we are indebted to Dr. A. H. Lawton, Dr. Charles E. Hutchinson, from Headquarters, U. S. A. F., and to Lt. Col. Andres I. Karstens, and Dr. Kaare Rodahl, of the Arctic Aeromedical Laboratory, Department of the Air Force, whose encouragement and support have made possible the continuation of the work of the *Arctic Bibliography* and the publication of this volume.

Henry B. Collins  
Chairman, Directing Committee  
*Arctic Bibliography*

June 1953

## INTRODUCTION

This volume continues the record of arctic literature as outlined in the Introduction of the first volume—with certain significant changes in emphasis. A greater proportion of the publications described here post-date World War II. They show the increase of developmental and relative decrease of exploratory activities in the North. They reflect the extension in recent years, of research under arctic conditions produced in laboratories, as well as field work in the high latitudes. More arctic data are incorporated into recent broadly based scientific monographs and practical scientific handbooks than was the case in pre-war years. Accordingly such publications, notably Russian, are more strongly represented in this than earlier volumes of the Bibliography.

The first results of intensive search of publications on health and medicine under low temperature conditions are represented in this volume. The several hundred such papers are described, and indexed under Physiology, Environmental Effects, Frostbite, Disease, Medicine, Public Health, and related terms. These publications relate largely, though not exclusively, to the white man's life in the Arctic. That of man native to the North was broadly though by no means exhaustively covered as far as North America is concerned, in the first three volumes of *Arctic Bibliography*. And with the present volume similar coverage for natives of northern Eurasia is begun. A more systematic search of anthropological literature than was hitherto possible is planned to extend and coordinate such materials described in the earlier volumes. Physiology and anthropology, as the two disciplines primarily

concerned with the human factor in Arctic problems, will be strongly represented in the next volume of this bibliography. There, too, a list of journals considerably extended from that in volume 1 will be published.

Descriptions of the materials are on the whole somewhat more informative than in the initial volumes. Those in botany and zoology have been contributed largely by Mr. Vladimir Asmous, those in health and medicine and the biological sciences generally by Dr. Emil Liebman, and those in anthropology by Dr. Jonas Balys, all members of the Project staff. The Finnish materials, particularly on forestry, were analyzed by Mr. George Makela. Analyses by other bibliographic units, working more intensively in specialized fields, are quoted for items of common interest. The resultant economy of effort seems to outweigh, by far, some difference of emphasis or viewpoint. Thanks are given to the Snow, Ice, and Permafrost Research Establishment of the U. S. Army, Corps of Engineers, for such courtesy, extended by its SIPRE Project in Library of Congress. Contributions to *Arctic Bibliography* from *Meteorological abstracts and bibliography*, and from *Bibliography and index of geology exclusive of North America* are again gratefully acknowledged.

Marie Tremaine  
Director of Arctic Bibliography Project

## ARCTIC BIBLIOGRAPHY

**20004. \*A., D. Kamchadaly.** (*In: Éntsiklopedicheskiĭ slovar'*, 1890-1904. v. 14, p. 224-25) **Title tr.:** The Kamchadals.

Account of these inhabitants (about 4000) of the southern part of Kamchatka Peninsula; their various dialects; their stone-age culture until the end of the 17th century; their physical characteristics; their way of life and religious beliefs; social organizations; sea-animal hunting, fishing and sealing; their farm and garden produce; textiles, domestic animals and trade.

**Copy seen:** DLC.

**20005. \*A., D. Ostiäki** (*In: Éntsiklopedicheskiĭ slovar'*, 1890-1904. v. 22, p. 368-70) **Title tr.:** The Ostyaks.

Brief account of these Finno-Ugrian tribes ("about 25,000") distributed along the valleys of the Ob' and Irtysh Rivers and their tributaries; etymological origin of the tribal name; relationship of Ostyaks to the Magyars; their language and history; physical characteristics as typical of a remnant of an ancient race; their clothing, dwellings, seasonal migrations with fishing in summer, hunting in winter; their agricultural economy; farms, orchards, cattle and horses; their psychological characteristics; exploitation and subsequent moral and economic deterioration; mixture of Christian and traditional religious beliefs and practices, shamanism, death and marriage customs, folklore, etc., the process of russification these peoples.

**20006. AALTONEN, VIKTOR TOIVO, 1889-** . Kangasmetsien luonnollisesta uudistumisesta Suomen Lapissa, I. Helsinki, 1919. ix, 319, 56 p., illus., plates, fold. map, diags. (Helsingfors. Metsätie-

teellinen tutkimuslaitos. Julkaisuja, 1) **Title tr.:** The natural renewal of heath forests in Finnish Lapland, I.

Contains an introductory survey of the area: its geology, altitude, hydrology, weather, soil types and soil temperature; vegetation of the area; forests (type, age, effect of forest culture), p. 1-44. Data and discussion on the natural renewal of dry heath forests: (in brief) their characteristics, occurrence throughout the world and in Lapland; earlier studies on factors affecting their renewal in various countries, p. 45-100; data (in detail) on these forests in Lapland: method of the present study and experiment areas, description of the renewal process (data on seedlings, branches, trunk and seeds), p. 101-163; factors affecting renewal of pine forests: (1) surface growth, the seedlings, their type, density and spacing, etc.; (2) effect of mature trees on new growth; (3) damage from reindeer grazing, trampling, horns, etc.; (4) effect of snow (weight) p. 271-85; (5) ground freezing and thawing (p. 286-97) and its effect on forest renewal; (6) fungi and insects (*Phacidium infestans* Karst, *Lophyrus sertifer* Geoff., and *Tortrix resinella* L.) p. 164-308. Spruce and leaf tree renewal, p. 309-312; dry heath forest care, p. 313-19. Bibliography 110 items. Summary in German, p. 1-48 (at end) and German-Finnish glossary, p. 53-56. **Copy seen:** DLC.

**20007. AALTONEN, VIKTOR TOIVO, 1889-** . Metsikön itseharventumisesta ja puiden kasvutilasta luonnonmetsissä. Helsinki, 1925. 20 p. tables, diags. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisuja, 9:5) **Title tr.:** The natural thinning of forests and the condition of the trees in natural forests.

Contains data on birch, spruce, and pine trees in forested regions including Lapland. Summary in German.

**Copy seen:** DLC.

\*Probably Dmitriĭ Nikolaevich Anuchin, 1843-1923, q.v.

**20008. AALTONEN, VIKTOR TOIVO, 1889-** . Studien über die Bodenbildung in den Hainwäldern Finnlands, mit einigen Beobachtungen über ausländische Braunerden. Helsinki, 1947. 92 p. illus., tables, diagrs. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisu, 35:1)

**Title tr.:** Studies on the soil formation in the grove forests of Finland, with some observations on exotic brown soil.

*Contains* physical, chemical and floristic analyses of young and old soils and their formation in southern and northern Finland including Lapland: a study of old soils from various European countries and a discussion of the importance of the brown soil in soil classification. Bibliography (27 items). Summary in Finnish.

**Copy seen:** DLC.

**20009. AALTONEN, VIKTOR TOIVO, 1889-** . Über den Einfluss der Holzart auf den Boden. Helsinki, 1932. 88 p. tables, diagrs. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisu, 17:5)

**Title tr.:** On the effect of different species of trees on the soil.

*Contains* chemical and other soil analyses in larch and mixed stands, to ascertain the possible effect of the kind of trees on the quality of the soil. The differences found were insignificant; the difficulty of determining the effect of trees on the soil is discussed. Summary of the text in English, captions to the extensive data tables in Finnish and English.

**Copy seen:** DLC.

**20010. AALTONEN, VIKTOR TOIVO, 1889-** . Über die Ausbreitung und den Reichtum der Baumwurzeln in den Heidewäldern Lapplands. Helsinki, 1920. 55 p. 20 plates, tables. (Acta forestalia fennica, 14:1) **Title tr.:** On the spread and abundance of roots in heath forests of Lapland.

*Contains* an analysis of the root systems of individual, specific trees; amount and spread of roots in forests; root-competition.

**Copy seen:** DLC.

**20011. AALTONEN, VIKTOR TOIVO, 1889-** . Über die postglazialen, natürlichen Veränderungen des Waldbodens in Finnland. Helsinki, 1933. 22 p. map, diagrs. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisu, 18:4) **Title tr.:** On the post-glacial, natural changes of the forest soil in Finland.

*Contains* preliminary report, dealing mainly with the problem of podsol formation in Finnish forests, including those of

the arctic area. Three main factors in podsol formation are discussed: climate, constitution of the soil, and its age. Forest soils are classified accordingly; conditions in adjacent countries are also discussed.

**Copy seen:** DLC.

**20012. AALTONEN, VIKTOR TOIVO, 1889-** . Wasserverbrauch der Bäume und Feuchtigkeitsverhältnisse des Bodens. Helsinki, 1920. 24 p. 4 plates, tables. (Acta forestalia fennica, 14:2) **Title tr.:** Water consumption of trees and humidity of the soil.

*Contains* an analysis of humidity conditions of the soil around individual trees as compared with trees in stands. Part of the study was conducted near Sodankylä in Lapland. Data on methods, humidity of soil at various depths and distances from trees, etc., are supplied. Bibliographical footnotes.

**Copy seen:** DLC.

**20013. AALTONEN, VIKTOR TOIVO, 1889-** . Zur Kenntnis der Ausfällung des Eisens im Boden; eine vorläufige Mitteilung. Helsinki, 1923. 10 p. (Acta forestalia fennica, 1923. v. 25) **Title tr.:** Contribution to the knowledge of iron precipitation in the soil; a preliminary report.

*Contains* an account of observations and experiments made in 1920-21 at several points of northern Finland and Lapland, on the rôle iron plays in the process of podsolization and formation of meadow-ore and on the rôle humus plays in counteracting these processes. Preliminary results of some experiments on precipitation of iron sol are given. Bibliographical footnotes.

**Copy seen:** DLC.

**20014. AALTONEN, VIKTOR TOIVO, 1889-** . Zur Stratigraphie des Podsolprofils besonders vom Standpunkt der Bodenfruchtbarkeit. I. Helsinki, 1935. 150 p. illus., maps, diagrs., tables. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisu, 20:6) **Title tr.:** The stratification of podsol soil with regard to the fertility, I.

On the basis of investigation of 3300 profiles in 974 locations, author presents data on physical and chemical properties of the soil, its age, the effect of various solutions on soil samples, and its stratification; comparing podsol soil from dry heath forests (sandy ground) in northern, with that occurring in southern Finland. Summary in Finnish, p. 114-22.

**Copy seen:** DLC.

**20015. ÅNGSTRÖM, ANDERS KNUTSON, 1888-** . Applications of heat radiation measurements to the problems of the evaporation from lakes and the heat convection at their surfaces. (Geografiska annaler, 1920. Årg. 2, häft. 3, p. 237-52, 5 tables) "Evaporation from Lake Vassijaure in summer determined and theoretical values are applied to the problem of convection of heat from sea surfaces. Indicated that there must be a balance of energy between the insolation absorbed by a body of water and the energy exchanges due to radiation, convection, conduction, and the latent heat of evaporation, and that evaporation might be determined by measuring the components of this equilibrium"—*Meteorological abstracts and bibliography*, Nov. 1950. v. 1, no. 11, p. 735. Includes bibliography (14 items).

**Copied seen:** DWB.

**20016. AARIO, LEO.** Jääkauden jälkeisestä ilmaston kehityksestä ja sen vaikutuksesta kulttuurihistoriaan. (Terra, 1944. v. 56, no. 2, p. 41-53, map) **Title tr.:** Sketches of the development of the weather following the ice age and its effect on cultural history.

Includes data on the climate of the Petsamo area in comparison with that of southern Finland and on the effect of climate on culture in general. **Bibliography** (20 items). **Copied seen:** DLC.

**20017. AARIO, LEO.** Der Tümmelerfund von Kolosjoki und die Entwicklungsgeschichte der Wälder Petsamos. Helsinki, 1939. 11 p., illus, diagr. (Fennia, 66:4) **Title tr.:** The porpoise finds of Kolos River and the development of the forests of Petsamo.

The bones were found in 1937 at an elevation of 30 meters above sea level and covered by a 25 m. layer of clay. A pollen and diatom analysis suggested that the skeleton belongs to the beginning of the Pholas-period (ca. 6800 B. C.) or even to an older period, and that due to the colder climate the pine forest was even farther from the area than today. **Bibliography** (7 items).

**Copied seen:** DLC.

**20018. AARIO, LEO.** Turpeen siite-pölyrunsauden käytöstä metsätiheyden selvittäjänä. (Terra, 1942. v. 54, no. 1-2, p. 1-14, tables) **Title tr.:** Pollen frequency in peat used to determine the density of former forests.

On the basis of 1009 pollen frequency

determinations in test ranges from the bog at Petsamo, author determines density and types of former vegetation throughout Lapland and on the islands near Petsamo. Eight vegetation types are classified as: tundra, birch scrub, birch forests, Pholas age and older birch groves, birch and pine forests, pine forests, unwooded fjeld (glaciated arctic hill) areas, and birch-covered fjelds. **Bibliography** (10 items). Summary in German. **Copied seen:** DCL.

**20019. AARIO, LEO.** Waldgrenzen und subrezentenen Pollenspektren in Petsamo, Lapland. Helsinki, 1940. 120 p. 2 plates, illus., fold. map, diagrs., tables. (Suomalainen tiedeakatemia. Toimituksia. Annales Academiae scientiarum fennicae, 54:8) **Title tr.:** Forest limits and sub-Recent pollen spectra in Petsamo, Lapland.

The study deals with present forests in the region roughly north of 68°20' N. lat., between the Patsjoki River and the pre-1944 Russo-Finnish border. This region and its forests is described in detail (p. 9-21); the selection and treatment of the peat specimens is outlined, and results given: pollen analyses in the investigated areas; pollen conditions along the routes of the investigations; pollen spectra in the various forest areas in this region; the occurrence of individual plant species and genera in the pollen spectrum; comparative observations on the development of vegetation during the late- and post-glacial period. **Bibliography** (80 items).

**Copied seen:** DLC.

**20020. AARNIO, B.** Maalaatumuodostuminen ja luokitus. (Terra, 1924. v. 36, no. 2-3, p. 130-40, illus., diagrs.) **Title tr.:** The grouping and development of soils.

Contains outline of the main soil types, their development and occurrence, with data on the effect of low temperatures and northern trees on soil; remarks on salt in the soil in the far North.

**Copied seen:** DLC.

**20021. AARNIO, B.** Die mechanische Zusammensetzung der moräne in Finnland. (Suomen maataloustieteellinen seura. Aikakauskirja, 1938. v. 10, no. 1, p. 1-11, tables, diagrs.) **Title tr.:** The mechanical composition of moraine in Finland.

Contains discussion with tabular data giving depth (in cm.) and sizes (in mm.)

of soil particles and their frequency of occurrence in moraine soil in more than 100 localities in Finland, including several in the North. Summary in Finnish. **Copy seen:** DLC.

**20022. ÅRSVOLD, OTTAR.** Jeg lenges tilbake . . . Noen minner fra fangstmannslivet i Nordost-Grønland. (Polarboken, 1949, p. 65-72) **Title tr.:** I long for the past . . . Some recollections from a trapper's life in Northeast Greenland.

The author, who spent a winter in Northeast Greenland when he was 16, recounts some of his hunting experiences and encounters with wild animals.

**Copy seen:** CaMAI.

**20023. AARTOVAARA, GUST. A.** Miettetiä pohjanmaan rimpisoissa esiintyvän rautakarbonaattimalmin kauppa-arvosta. (Teknillinen aikakauslehti, 1936, v. 26, no. 5-6, p. 233-35) **Title tr.:** Potential value of the iron carbonate ores occurring in the bogs of northern Finland.

Contains results of a chemical study of the iron carbonate occurring in the bogs in Lapland. The appearance, possible abundance and easy reduction of these ores indicate that their working ought to be profitable.

**Copy seen:** DLC.

**20024. AASGARD, G.** Svalbard etter krigen. (Polarboken 1949, p. 27-52, illus., 2 maps) **Title tr.:** Svalbard after the war.

The damage suffered during World War II by the coal mines, quarries, power stations, administration buildings, etc., on Svalbard is reviewed, and the reconstruction work of the post-war period (1945-49) is described. Coal production rose from 6,007 tons in 1945 to 428,434 tons in 1948. Data on the Russian production and population on Svalbard are presented. The center of Russian activities is Pyramiden, which has a consulate, new administration buildings, and a Diesel power station. The administrative seat of the archipelago is Longyearbyen, where the larger part of the Norwegian population resides.

**20025. ABBOT, CHARLES GREELEY, 1872-** . Do volcanic explosions affect our climate? (National geographic magazine, 1913, v. 24, p. 181-98, diagr., photos., tables)

"General popular article discussing numerous volcanic eruptions (from Hecla,

Iceland, 1783, to Katmai, 1912), which had ejected vast quantities of volcanic dust into the atmosphere. Diagram shows variations in solar radiation and in earth's temperature: 1880-1910. Author believes volcanic dust does influence climate."—*Meteorological abstracts and bibliography*, June 1950, v. 1, no. 6, p. 366

**Copy seen:** DWB.

**20026. ABBOT, CHARLES GREELEY, 1872-** , and F. E. FOWLE. Volcanoes and climate. (Smithsonian Institution. Smithsonian miscellaneous collections, 1913, v. 60, no. 29, 24 p., 3 figs., 6 tables)

"Effects given of the haze believed to have resulted from the Katmai eruption, June, 1912, on the quantity and quality of solar radiation as determined by measurements, and also the effect which the presence of the haze and that of similar occurrences in former years (including Krakatoa) appears to have had on the climate of the earth."—*Meteorological abstracts and bibliography*, June 1950, v. 1, no. 6, p. 366.

**Copy seen:** DLC.

**20027. ABERCROMBY, JOHN, 1841-1924,** and A. GENETZ. The earliest list of Russian Lapp words. (Suomalais-ugrilainen seura. Aikakauskirja, 1895, v. 13, no. 2, p. 1-10)

Contains 95 words taken down in 1557 by an Englishman, Captain Borough, and first published in 1589. The words were taken from 16 natives, living on the Jakonga River, who visited aboard Borough's ship. Some of them could speak Russian. Appended (p. 8-10) are remarks by A. Genetz stating that the words were apparently taken from the Kildin Lapps, and that their language shows very little change since that time.

**Copy seen:** DLC; InU.

**20028. ABOL', I. P.** Tractive performance of the KT-12 tractor on snow trails, translated from Lesnaya promyshlennost' ('The logging industry' (USSR)), 1951, pp. 7-8, by E. R. Hope. Ottawa, Scientific Information Center, DRB Canada, 7 August 1951. T37R. 61. reproduced from typewritten copy.

Some results of tests carried out by Central Research Institute for Mechanization and Use of Power in Logging Operations. Tests, carried out on three types of bush snow-trails, show changes required in (1) caterpillars, (2) construction of the KT-12 for better load distribution, (3) curves and surface of trails.

**Copy seen:** CaMAI.

**20029. ABRAMOV, K. G.** Okhrana prirody i dal'nevostochnye zapovedniki. (Akademii nauk SSSR. Dal'nevostochnyi filial, Vladivostok. Vestnik, 1938. no. 30 (3) p. 265-71) *Title tr.:* Far Eastern reserves and their role in the preservation of nature.

*Contains* a discussion of the preservation of natural resources in the Far Eastern region and descriptions of the preserves and sanctuaries in the Sikhote Alin region, and of "Kronoki," i. e. Kronotskiy zapovednik, a preserve of about 3,200,000 acres on the eastern coast of the Kamchatka Peninsula (54°20'-55°15' N. 159°41'-162°10' E.); data on their activity and history of their development. *Copy seen:* MH-A.

**20030. ABRAMOVICH-BLĚK, SERGEĬ IVANOVICH.** Zapiski gidrografa. Kniga pervaya. Zemlia i ljudi, IASSR—1933. [Leningrad] Izd-vo pisatelei v Lenin-grade [1934]. 261 p. *Title tr.:* Notes of a hydrographer. Book 1. Land and peoples, Yakut A. S. S. R., 1933.

*Contains* observations on the life and people of Yakutia, made during extensive travels of the author. The relation between climate, economy and social conditions is stressed; achievements of the Soviet era, and attitudes of the anti-Revolutionaries are noted; the contrast between the old and the new regimes is emphasized. *Copy seen:* DLC.

**20031. ABS, OTTO AUGUST HANS, 1891-** . Hämatologische Befunde von Spitzbergen; ein Beitrag zur Frage der Polaranämie. (Zeitschrift für klinische Medizin, 1932. v. 120, p. 213-29, tables) *Title tr.:* Hematological conditions in Spitsbergen; a contribution to the problem of polar anemia.

*Contains* report on material collected in 1922-24 and especially on that of 1926, also corroborated from another source. Red blood-cell counts, and hemoglobin determinations were made, and the color index of the blood calculated from them. The so-called polar anemia was found to be an excessive drop in the normal annual fluctuation of hemoglobin. The cause of it (in addition to poor diet and disease) seemed to be the extreme conditions of light. Children are apt to develop the disease more easily than adults, but severe cases are observed even in men. Bibliography (13 items).

*Copy seen:* DSG.

**20032. ADAM, C. I.** The Bathurst Inlet patrol. (RCMP quarterly, July 1950. v. 16, no. 1, p. 12-25, illus., fold. map)

*Contains* account of police investigation of the murder of two white men, H. V. Radford and T. G. Street, June 1912, by Eskimos at Bathurst Inlet. The trip of two police officers from Baker Lake to Bernard Inlet, Mackenzie District, and return 1917-18 is described; the evidence collected, and decision not to prosecute are noted. *Copy seen:* CaMAI.

**20033. ADAMENKOV, A. A.** Opyt betonirovaniia oblisovki kanala v zimnee vremia. (Gidrotekhnicheskoe stroitel'stvo, Jan. 1952. v. 21, no. 1, p. 18-19, diags.) *Title tr.:* An experiment in lining canal surfaces with cement during the winter season.

*Contains* a description of an electric heating method applied (in preference to two others mentioned) to concrete canal lining 12 cm. thick, at temperatures as low as -22° C. Preparation of the concrete mixture, its transportation and heating, application, electric heating after application, etc., are described in detail.

*Copy seen:* DLC.

**20034. ADAMKIEWICZ, GEORGE.** If Alaska were still Russian. (Dalhousie review, Jan. 1948. v. 27, p. 468-76)

Brief review of Russian colonization and exploitation of Alaska, its purchase by the United States in 1867 and its strategic importance today.

*Copy seen:* DLC.

**20035. ADAMOV, ARKADIĬ. G. I.** Shelikhov, zamechatel'nyi russkii moreplavatel' i issledovatel'. Stenogramma publichnoi lektsii, pročitannoi v Moskve. Moskva [Pravda] 1951. 30 p. port., map. *Title tr.:* G. I. Shelekhov, a remarkable Russian seaman and explorer. Stenograph of a public lecture delivered in Moscow.

*Contains* an outline (for the Society for dissemination of political and scientific information) of the life and explorations of Grigorii Ivanovich Shelekhov, 1747-1795, including his voyage from Okhotsk to Bering Island in the summer of 1783, thence to Kodiak Island in 1784; his (and others') subsequent activities in trade and settlement in Russian America. *Copy seen:* DLC.

**20036. ADAMOV, ARKADIĬ.** Pervye russkie issledovateli Al'jaski. Posobie dlia

uchitelei srednei shkoly. Moskva, Gos. Uchebno-pedagogicheskoe izd-vo Ministerstva prosveshcheniia RSFSR, 1950. 124 p. illus., maps (1 fold.) *Title tr.:* The first Russian explorers of Alaska. A manual for high school teachers.

*Contains* a brief introductory chapter on Russian exploration generally and in America. Then follow chapters on four notable explorers and administrators of Russian America, their activities and achievements: Aleksandr Baranov and his associates (p. 13-44); Aleksandr Kashevarov (p. 45-72); Lavrentii Zagoskin (p. 73-104); Ruf Serebrennikov and exploration of the Copper River (p. 105-122). Includes numerous illustrations, some evidently reproduced from 19th century narratives cited at end.

*Copy seen:* DLC; MH.

**20037. ADAMOV, ARKADIĬ.** Russkie na Shpitsbergene. (Znanie-sila, Jan. 1952. v. 23, no. 1, p. 26-27, illus.) *Title tr.:* The Russians on Spitsbergen.

*Contains* a popular account of Russian activities on West Spitsbergen as from the beginning of the 15th century; notes on the expedition of Chichagov 1764-66, of the Swedish-Russian scientific parties 1898-1902, of Rusanov (1912); recent economic and political problems of Spitsbergen.

*Copy seen:* DLC.

**20038. ADAMOVA, A. A., and others.** Issledovanie konservov, khranivshikhsia v Arkteke neskol'ko desiatkov let. (Gigiena i sanitariia, July, 1950, no. 7, p. 28-29) *Other authors:* S. KH. Ginzburg, and M. A. Lebedeva. *Title tr.:* A study of tinned food left in the Arctic for several decades.

*Contains* a note on a chemical examination of 10 foreign and Russian cans of food left behind by various (including Vil'kifskii) expeditions. Two cans were found to be not hermetic and were excluded from further study; three showed excessive amounts of lead; preserved fat was completely spoiled; some contents were useable; no bacteriological examination was made.

**20039. ADAMS, ANSEL EASTON, 1902-** "The great land." (Sierra Club bulletin, June 1950. v. 35, no. 6, p. 12, 12 plates)

Brief note accompanying 12 photographs of Alaska, made under a Guggenheim Fellowship project (photographs of national parks and monuments).

*Copy seen:* DGS.

**20040. ADAMS, K. T.** Station marks in Alaska. (U. S. Coast and Geodetic Survey. Journal, Dec. 1951. no. 4, p. 154-55)

"Methods for improving the degree of permanence of station marks in Alaska are presented. The preference for settings for permanent marks is given, and important considerations for marking stations are indicated. Pipes up to 6 ft. in length are recommended for regions where steam jets are practicable for sinking the pipe into permafrost. Heavy chisel point digging bars can be used if steam jets are not available."—SIPRE.

**ADAMS, RAYMOND D.,** *see* Denny-Brown, D., & others. Pathology injury to nerve. 1945. No. 21423.

**20041. ADAMSON, JAMES DOUGLAS, 1890-** , and others. Poliomyelitis in the Arctic. (Canadian Medical Association. Journal, 1949. v. 61, p. 339-48, illus., map, tables) *Other authors:* J. P. Moody, A. F. W. Peart, R. A. Smillie, J. C. Wilt, and W. J. Wood.

*Contains* in this report on a winter (1948-49) epidemic among the Eskimos of the Canadian Eastern Arctic: data on the locale, demography, habits and hygiene, epidemiology, age and sex incidence, clinical factors, treatment, virus studies. The epidemic occurred in the depth of an unusually cold winter and resulted in great devastation, killing in the Chesterfield area four percent of the total population and paralyzing 14 percent. All ages except those under 3 were affected; spread apparently took place through clinically healthy carriers; the epidemic has been shown by monkey inoculations to be due to a poliomyelitis virus. Bibliography (5 items). This paper was listed previously in *Arctic Bibliography*, No. 49. *Copy seen:* DSG.

**20042. ADOLPH, EDWARD FREDERICK, 1895-** , and J. W. LAWROW. Acclimatization to cold air; hypothermia and heat production in the golden hamster. (American journal of physiology, July 1951. v. 166, no. 1, p. 62-74, 5 fig.)

*Contains* an account of a study of low temperature tolerance and heat exchange during hypothermia of the hamster (which survives low temperatures and does hibernate), supplemented by comparison of conditions in the rat, which does not survive low temperatures. Rates of cooling in standard circumstances;

oxygen consumption at rest and during cooling; rate of heart beat and the relation of breathing to oxygen consumption, as well as some results of acclimatization were investigated. Paralysis of heat production by chilling and rates of heat loss were less in hamsters than in rats. Bibliography (22 items).

*Copy seen:* DLC.

**20043. ADOLPH, EDWARD FREDERICK, 1895-**, and **G. W. MOLNAR.** Exchanges of heat and tolerances to cold in men exposed to outdoor weather. (American journal of physiology, July 1946. v. 146, p. 507-537, diagsr.)

"Men nearly nude were exposed outdoors to environments ranging from uncomfortably warm to bitterly cold. Their responses over periods of one to four hours were measured in terms of pulse rates, arterial pressures, deep and superficial temperatures, heat exchanges (production, evaporative loss, sensible exchange, and storage), ventilation rate, urinary flow, and blood concentrations." Author gives full discussion of the investigation and results and a useful table of equivalent increments of air temperature for sunshine, wind, work, and clothing. Bibliography (25 items).

*Copy seen:* DLC.

**20044. ADOLPH, EDWARD FREDERICK, 1895-**. Lethal limits of cold immersion in adult rats. (American journal of physiology, Dec. 1948. v. 155, no. 3, p. 378-87, 7 fig.)

Contains account of a study aimed to ascertain "what conditions limit an animal's endurance of immersion in cold water." Median lethal temperature and colonic temperatures are given. Rates of cooling were not significant factors in survival. Age over one month, season, size, sex, administration of glucose, cortin, digitalis or oxygen, deprivation of food and water, and acclimatization to cold, all failed to modify the lethal temperature. Results of incomplete rewarming are also discussed. Bibliography (10 items).

*Copy seen:* DLC.

**20045. ADOLPH, EDWARD FREDERICK, 1895-**. Oxygen consumptions of hypothermic rats and acclimatization to cold. (American journal of physiology, June 1950. v. 161, no. 3, p. 359-73, 7 fig.)

Contains a report on a study (with assistance of J. W. Lawrow) aimed to determine whether acclimatization to cold involves a shift in the relation between

heat production and body temperature, by recording the oxygen consumption during body cooling and rewarming. Acclimatization to cold was found in the increase of resting oxygen consumption after a sojourn in air of 5° C. for 5-25 days; maximal oxygen consumption, and decrease of oxygen consumption with decrease of colonic temperature, were not modified by preceeding cold acclimatization. Bibliography (23 items).

*Copy seen:* DLC.

**20046. ADOLPH, EDWARD FREDERICK, 1895-**. Responses to hypothermia in several species of infant mammals. (American journal of physiology, July 1951. v. 166, no. 1, p. 75-91, 5 fig.)

Contains a report on a study of a series of laboratory animals, made at various postnatal ages, with respect to lower lethal temperature limits, heart-beat frequencies, and breath frequencies. Lethal temperatures that could be endured became higher with increased age in all species; heart-beat frequencies and breath frequencies bore diverse relations to body temperatures at different postnatal ages; isolated, perfused hearts showed relations to temperature different from those *in situ*. The adult pattern of responses to hypothermia was found to emerge from properties present at birth after a series of modifications and transitions occurring at specific ages. Bibliography (27 items).

*Copy seen:* DLC.

**20047. ADOLPH, EDWARD FREDERICK, 1895-**. Some differences in responses to low temperatures between warm-blooded and cold-blooded vertebrates. (American journal of physiology, July 1951. v. 166, no. 1, p. 92-103, 5 fig.)

Contains a study on the relation of, heart-beat frequency, breath frequency and oxygen consumption to body temperatures in representatives of the five classes of vertebrates. Heart-beat frequencies showed different patterns and relations to temperature in the warm-blooded as compared with the cold-blooded forms; studies with isolated hearts showed that some of these differences were inherent in the tissues even after their separation from the organism. The differentiation in breath-frequencies was less decisive between the cold- and warm-blooded groups. Nervous and endocrinal systems showed to have influences, especially at higher temperatures, and particularly in the oxygen consump-

tion of warm-blooded animals. Bibliography (55 items). *Copy seen:* DLC.

**20048. ADOLPH, EDWARD FREDERICK, 1895-**, and **G. W. MOLNAR.** Temperature gradients in men exposed to cold. (Federation proceedings, Mar. 1946. v. 5, p. 1)

Abstract of observations of temperature differences in deep tissues and at body surface, with conclusion that by "using its outer shell as insulation for the deep tissues, the human body maintains large temperature differences for as long a time as heat can be produced at fatiguing rates." *Copy seen:* DLC.

**ADOLPH, EDWARD FREDERICK, 1895-**, see also Molnar, G. W., & E. F. Adolph. Heat exchanges man cold environments. 1946. No. 24429.

**20049. ÄIMÄ, FRANS GUSTAF, 1875-1936,** and **T. ITKONEN.** Bericht über eine linguistische Forschungsreise zu den Lappen von Petsamo. (Finnisch-ugrische Forschungen. Anzeiger, 1928. Bd. 19, no. 1-3, p. 93-94). *Title tr.:* Report on a linguistic exploring expedition to the Lapps of Petsamo.

Both scholars, sponsored by Finno-Ugric Society, made an expedition July-Aug. 1927, to the village of Kolttaköngäs at the mouth of the Patsjoki River where about 50 Lapps were living. Some 600 new basic Kola Lapp words and 25 typical tales and legends were collected.

**20076. AHLMANN, HANS WILHELMSSON, 1889-** De franska polarexpeditioner. (Ymer, 1948. v. 68, p. 231-33)

"A brief survey of recent French polar expeditions in the Arctic and Antarctic. The Greenland expedition under the leadership of Paul-Émile Victor has a comprehensive program of surveying a section across the Greenland ice; seismic measurements of ice depth; studies of ice ablation, accumulation, density, and temperature; and of climatic and meteorological observations at a station on the ice (75° N. and 40° W.); as well as cosmic ray and ionospheric measurements; meteoric and biological studies. The meteorological program included radiosonde observations and the station is to be continued for several years, being supplied by parachute and airplane. The station reports three times a week to Paris by radio."—*Meteorological abstracts and bibliography*. Oct. 1950, v. 1, no. 10, p. 634-35. **Copy seen:** DLC.

**20077. AHLMANN, HANS WILHELMSSON, 1889-**, and E. G. DROESSLER. Glacier ice crystal measurements at Kebnekajse, Sweden. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. Assemblée générale d'Oslo, 1948. Procès-verbaux des séances, t. 2, Travaux de la Commission de la Neige et des Glaciers, pub. 1950? p. 221-27, illus.)

Contains note on method used in the humid conditions of Swedish Lapland to record and measure ice crystals, with tabular results; also some discussion of the crystallographic structure of ice in various parts of glaciers on the Kebnekaise massif.

"Impressions of ice crystals were obtained using paper towelling and a mixture of clay and a brown powder stain insoluble in water. The mixture was rubbed on the ice surface, the paper was pressed into close contact with the treated area. The paper was removed and analysed when crystal outlines appeared. Frequency diagrams of crystal

sizes and the sizes of crystal diameters were calculated for ice samples collected from various parts of the glacier. It is shown that an average value of the crystal size in any measured area is not representative due to the large variation and distribution. The largest individual crystals were found in dead ice."—SIPRE.

Also pub. in *Journal of glaciology* Mar. 1949. (*Arctic Bibliography*, No. 109A).

**20078. AHLMANN, HANS WILHELMSSON, 1889- .** Glacier variations and climatic fluctuation. Washington, 1952. 91. mimeographed.

Contains text of the American Geographical Society's The Bowman Memorial Lecture, delivered before the International Geographical Union meeting, Washington, Aug. 13, 1952. On the basis of conditions in Scandinavia and Iceland with comparisons to those of North America, author develops the theme that "glaciers, being conditioned by climatological factors, register changes of climate by their variation." He presents data on the ice budget of Storglaciär, Kebnekaise Mts. in Swedish Lapland compared with other studied glaciers, indicating a recession lasting from 1908 till about 1945. The warm climatic trend in the Northern Hemisphere especially in the Arctic and its causes, conditions in Alaska, changes in animal and plant distribution due to warmer winters, conditions in Iceland, effects of increased temperature on the water régime and permafrost, glacier and climatic conditions since about 8000 B. C., are all dealt with in more or less detail.

Scientific investigations in the Kebnekajse massif, Swedish Lapland. I. General outline of the investigations in 1946-51. II. The petrology and tectonics of the Kebnekajse region and their morphological importance. III. Kartografiska arbeten i Kebnekajse. IV. Det lokala triangelnätets i Kebnekajse anslutning till riksnätet. Syd- och nordtopparnas höjd över havet. (*Geografiska annaler*, 1951. Årg. 33, p. 90-142, illus. maps (incl. 2 fold.), diagrs.)

**Other authors:** H. J. Johansson and E. Woxnerud.

Contains (in the first paper, p. 90-94, by Ahlmann) an account of the research work conducted on the Storglaciär and Rabotsglaciär of the Kebnekaise massif (67°54' N. 18°30' E.). Its object was to study the general glaciological character of the massif, to determine the extent of glacial recession in as many previous years as possible, and to examine in detail the yearly material balance, or budget, of the two glaciers. The problems involved are presented in detail, as well as information on supporters of the work, personnel, buildings, equipment, etc.

In the second paper (p. 95-120) Harald J. Johansson gives a description of the region, general features of the stratigraphy and tectonics of the Scandinavian mountain range (in brief), and the Kebnekaise region (in detail); its dip conditions and fractures. Vegetation is discussed as a regulating factor of the morphological development, dependent on the climate and the chemical composition of the soil.

In the third paper (*Cartographic work in Kebnekajse*, p. 121-30, text in Swedish with English summary) Erik Woxnerud describes "the methods used in preparing a large-scale contour map of the Storglaciär by means of photogrammetry. Stakes were planted in the ice and snow to determine the amount of accumulation and ablation, and the rate of movement of the glacier surface. Triangulation of the stakes showed that the heights of most of them coincided exactly with the contours. Uses of the new map will include future determination of changes in the extent of the glacier."—SIPRE.

The fourth paper (p. 131-49) by Erik Woxnerud, is *The linking up of the local triangulation net in Kebnekajse (in the Tarfala valley) with the official geodetic*

net. The heights above sea-level of the Sydtopp and the Nordtopp. Text in Swedish with English summary.

Thirty-three indigenous word-combinations for designating cultural objects are listed, and evidence deduced that the proper cultural words of Ob-Ugric languages derive from four sources: Samoyed, Tatar, Zyryan, and Russian.

**Copy seen:** DLC; InU.

**20086. AHLQVIST, AUGUST ENGELBREKT, 1826-1889.** Unter Wogulen und Ostjaken; Reisebriefe und ethnographische Mittheilungen. (Finska vetenskaps-societeten, Helsingfors. Acta Societatis scientiarum fennicae, 1885. v. 14, p. 133-308, 11 plates, 34 illus., fold. map) **Title tr.:** Among the Voguls and Ostyaks; letters from journeys and ethnographical information.

Contains letters from the author's three expeditions to the Ob', Irtysh, and Konda valleys to study the Ob-Ugrian peoples: (1) in 1858-59 to Pelym, Verkhne-Pelymsk, Sortingje (now Sartynya), Berezov and Obdorsk (now Salekhard), studying the Vogulian and Ostyakian languages, collecting lexical and grammar material; (2) in 1877 to Tobolsk and Berezov with student Emil Boehm as photographer, and another student, Ewald Bergroth, who collected fishes and insects for the Finnish Zoological Museum; (3) in 1880 up the Konda River to the Tyumen Lakes, visiting the Vogul village of Levush (i. e. Leushi, 60° N. 66° E.) accompanied by the botanist Eduard Wainio, and the zoologist Nicolai Sundman. The letters, informal in style,

relate the experiences of travel, describe the country traversed, its population, economic activities (Ob' fisheries) and resources (forests), etc. They contain informative notes on native peoples: Voguls on the Los'va and Sos'va Rivers, their occupation, dwellings, clothing, food, racial character, religion and beliefs, trade and native administration (p. 158-75); the Ostyaks of Obdorsk and their prince Taishin, owner of a ten thousand-head herd of reindeer, who dwelt in a skin tent in winter, and one of birch bark in summer (p. 181-82, 249-50); the Ostyak fishers on the Ob' River, their nets and boats (p. 185-86, 219); the Ostyak sacrificial places and idols hidden in the woods (p. 241); the wandering Zyryans on the lower Ob' (p. 241-44); annual fair at Obdorsk and the drinking of Samoyeds (p. 244-45); the Vogulian games (masked performances) and dances in Sortingje (p. 256-59); climate and vegetation around Sortingje (i. e. Sartynya, 63° N. 63° E.) and Samarovo (p. 260-61); the Konda-Voguls in the village of Levush, i. e. Leushi (p. 279-82). Most important is chap. 12 (p. 286-307) written after author's return home, summarizing his observations on: place names and names of Ugrian peoples, their physical appearance (with 24 photographic illus. of individuals which show also types of clothing), sex attitudes and marital life; religion, idols and sacrifices; women's handicrafts (specimen reproduced in color); cultural influence from the Tatars; time reckoning; family or property marks and signatures (specimens reproduced on plates 6-9), music and poetry (with six Ostyak melodies given on plate 10, texts of four songs noted in Obdorsk given in German translation, and 10 Vogulian and 12 Ostyakian riddles). Important are the numerous illustrations from sketches or photos made by G. W. Nummelin. Ahlqvist, whose journeys were sponsored by the Finnish government, brought home an extensive collection of objects of material culture for the Ethnographical Museum of the Finnish University.

A conference "(1) to review the status of scientific research in Alaska, (2) to appraise the major requirements of future research, and (3) to explore ways and means of developing new facilities and coordinating existing ones." These proceedings include minutes of the opening and closing sessions and of the general meetings: addresses by officials of the Territory of Alaska, of the U. S. Depts. of Agriculture, Interior, Commerce and Defense, the U. S. Coast Guard, Federal Security Agency, Smithsonian Institution, and of the Arctic Institute of North America; abstracts of papers and proceedings from section meetings on agriculture and forestry, anthropology, botany, geography and geology, geophysics, meteorology, oceanography, physiology, public health and medicine, and zoology; symposia on permafrost, health problems of Alaskan Eskimos, Aleuts and Indians, relationship of vegetation to the physical environment, and sea ice; reports on research facilities and opportunities in Alaska and recommendations of the conference. These proceedings represent the contributions of 129 scientists; 23 of the papers are published in full in the Conference's *Selected papers*, 1952, q. v.; the following are abstracted (or given in full) here:

*Agriculture and forestry.*

Cardon, P. V. Interest of American

public in agricultural research in Alaska.

Kellogg, C. E. Soils of Alaska.

Sherman, C. G. Agricultural research requested by farmers for development of Alaska.

Aamodt, O. S. Ecology of crop and forage plants in Alaskan agriculture.

Irwin, D. L. Status and accomplishments of agricultural research in Alaska.

Taylor, R. F. Alaska forest research problems and program.

#### *Anthropology.*

Garfield, V. E. Anthropological research in southeastern Alaska.

Lantis, M. What is happening and what can happen to Alaska Eskimos.

De Laguna, F. Preservation of archaeological and ethnological material in Alaska; with comment by D. Jenness.

Laughlin, W. S. Contemporary problems in the anthropology of southern Alaska.

Rainey, F. G. Eskimo archaeology in 1950.

Giddings, J. L. *Jr.* Problems of early man in Alaska.

#### *Botany.*

Steere, W. C. Botanical research in Alaska.

Raup, H. M. Physiographic ecology in Alaska; with comment by R. S. Sigafos.

Porsild, A. E. Vegetation of arctic Alaska and Yukon; with comment by W. A. Dayton.

Wiggins, I. L. The future of botanical research in Alaska; with comment by N. Polunin.

Griggs, R. F. Revegetation and soil formation in Alaska; with comment by D. B. Lawrence.

Anderson, J. P. The flora of Alaska; with comment by E. H. Walker.

#### *Geology and geography.*

Field, W. O. *Jr.* Glaciological research in Alaska.

Miller, M. M. The Juneau Ice Field Research Project, 1948-50.

FitzGerald, G. Surveying and mapping in Alaska.

Miller, R. L. Petroleum geology in Northern Alaska.

Rathjens, G. W. Applications of permafrost research in the Arctic.

Waananen, A. O. The hydrology of Alaska.

Stone, K. H. Some geographic bases for new Alaskan settlement.

#### *Geophysics.*

Roberts, E. B., and D. G. Knapp. Geomagnetism.

McNish, A. G. Interest of Central Radio Propagation Laboratory, National Bureau of Standards, in radio propagation research in Alaska.

Swartz, J. H. Geophysical investigations in the Aleutian Islands.

McCarthy, G. R. Geothermal studies in Northern Alaska.

Myers, W. H. Geophysical prospecting for oil through permafrost.

Wilson, W. S. The program of the Geophysical Institute at the University of Alaska.

#### *Meteorology.*

Dorsey, H. G., *Jr.* Meteorological factors affecting Alaskan development.

MacDonald, T. H. Measurement of solar radiation in the Arctic.

Oliver, V. J. Ice fog in Interior Alaska. Court, A. Climate, insects, and man in Alaska.

Bensin, B. M. Agroclimatological investigation in the permafrost region of the Tanana valley, Alaska.

Haynes, B. C. The Weather Bureau's arctic observation program outside of Alaska.

Pettersen, S. On the maintenance of the Aleutian Low.

#### *Oceanography.*

Dietz, R. S., and H. W. Menard. The sea floor of the Gulf of Alaska.

LaFond, E. C., J. F. T. Saur, *Jr.*, and J. P. Tully. Physical oceanography of the Bering and Chukchi Seas.

Emery, K. O. Topography of the Arctic Basin.

Wooster, W. S. Distribution of oxygen and phosphate in the Arctic Sea.

Wickham, J. B. Flux of latent and sensible heat at the sea surface off Point Barrow, Alaska.

Thompson, T. G., and C. A. Barnes. Physical and chemical oceanography of the Gulf of Alaska and the Aleutian Islands.

Marmar, H. A. Tides and sea level in Alaskan waters.

Johnson, M. W. Studies on plankton of the Bering and Chukchi Seas and adjacent areas.

#### *Physiology.*

Irving, L. A study on climatic adaptation in arctic and tropical mammals and birds.

Scholander, P. F. Metabolic studies above and below freezing in arctic and tropical coldblooded animals and plants.

Campbell, D. H. Studies on immunological phenomena in arctic mammals.

Wilber, C. G. Fat metabolism in arctic

as compared with temperate zone mammals.

Carlson, L. D. Acclimatization to the cold—physiological mechanisms.

Griffin, D. R. The comparative physiology of Alaskan bird migrations.

*Public health and medicine.*

Aronson, J. D. The medical history of Alaska.

Schiller, E. L. Observations on arctic parasitology with special reference to the status of echinococcosis and diphyllobothriasis in Alaska.

McCollum, E. L. The psychological aspects of arctic and subarctic living.

Fritz, M. H., and P. Thygeson. Phlyctenular keratoconjunctivitis among Alaskan natives.

Wilson, C. S. Some biological and technical aspects of control of biting insects in Alaska.

Alter, A. J. Water-supply problems in low-temperature areas; with comment by P. W. Roberts.

Day, E. K. Sewage and waste-disposal problems in low-temperature areas; with comments by H. A. Thomas, Jr., and R. J. Karpen.

*Zoology.*

Anderson, C. L. Territorial Fishery Administration.

Thompson, W. F. Some salmon research problems in Alaska.

Anderson, A. W. Fishery exploration and development in Alaska.

Thompson, S. Management of the marine resources of Alaska.

Allen, A. A. The bird fauna of Alaska.

Gabrielson, I. N. Alaskan waterfowl and their management.

Murie, O. J. Planning for Alaska's big game.

Anderson, R. M. The fur animals of arctic Alaska.

Elkins, W. A. Pressing problems in administration of wildlife resources in Alaska.

Green, D. D. Predator control problems in Alaska.

*Permafrost.*

Ray, L. L. Permafrost. (see under author's name)

Alter, A. J. Relationships of permafrost to environmental sanitation.

Benninghoff, W. S. Interaction of vegetation and soil-frost phenomena.

*Health problems of Alaskan Eskimos, Aleuts and Indians.*

Rausch, R. Biotic interrelationships of helminth parasitism in Alaska.

Paul, J. R. Epidemiological observations on Eskimos from the north coast of Alaska. [250 serum specimens from all age groups from normal Eskimos living on the north coast of Alaska were tested for various antibodies; a few complement-fixation tests against trichinosis antigen were carried out—all were negative.]

Haldeman, J. C. Problems of Alaskan Indian, Eskimo, and Aleut from the point of view of public health.

Laughlin, W. S. Aleut health problems from the viewpoint of an anthropologist.

*Relationship of vegetation to the physical environment.*

Sigafoos, R. S. Congeliturbation as a primary physical factor in tundra plant communities.

Baxter, D. V. Pathology in the future forest practice in Alaska.

Lutz, H. J. Ecological effects of forest fires in the interior of Alaska.

*Sea ice.*

Allen, L. P. The geography and morphology of sea ice.

Dichtel, W. J., and G. A. Lundquist. An investigation into the physical and electrical characteristics of sea ice.

Fletcher, J. O. Floating islands in the Arctic Ocean.

Fritz, S. The growth of ice thickness in arctic regions.

Dyer, J. G. Polar ice reconnaissance.

*General meeting.*

Heintzleman, B. F. Forestry in Alaska. (in full)

Day, A. M. The Alaskan fisheries. (in full)

Stewart, B. D. Mining in Alaska. (in full)

Landsberg, H. E. Alaskan research and national defense. (in full)

Flakne, J. T. Alaska and its development. (in full)

*Closing session.*

Broadbent, S. R. Research coordination in Alaska from the budget viewpoint. (in full)

McCollum, E. L. The Arctic Aeromedical Laboratory at Fairbanks. (in full)

Haldeman, J. C. Facilities and opportunities for research at the Arctic Health Research Center. (in full)

Wiggins, I. L. Facilities at the Arctic Research Laboratory at Point Barrow, Alaska. (in full)

Washburn, A. L. The Arctic Institute of North America and Alaskan research (in full)

Irwin, D. L. Facilities for agricultural research in Alaska. (*in full*)

Moore, T. The University of Alaska and scientific research in Alaska. (*in full*)

**20118. ALASKAN SCIENCE CONFERENCE OF THE NATIONAL ACADEMY OF SCIENCES, NATIONAL RESEARCH COUNCIL.** *Washington, D. C., Nov. 9-11, 1950.*

Selected papers, edited by Henry B. Collins. Washington, D. C., 1952. vi, 305 p. illus. diagrs., maps, tables. (Arctic Institute of North America. Special Publication no. 1)

*Contains* (p. iii-iv) preface noting that as this conference represented the first broad survey of Alaskan science, a representative selection of the papers presented are published as companion volume to its *Proceedings* (q. v.) viz.:

*Agriculture and forestry:* IRWIN, D. L. Status and accomplishments of agricultural research in Alaska.

TAYLOR, R. F. Alaska forest research problems and program.

*Anthropology:* GARFIELD, V. E. Survey of southeastern Alaskan Indian research.

LANTIS, M. Present status of the Alaskan Eskimos.

De LAGUNA, F. Preservation of archaeological and ethnological material in Alaska.

JENNESS, D. Preservation of archaeological remains in Canada.

LAUGHLIN, W. S. Contemporary problems in the anthropology of southern Alaska.

GIDDINGS, J. L. Ancient Bering Strait and population spread.

*Botany:* STEERE, W. C. Botanical research in Alaska.

WIGGINS, I. L. The future of botanical research in Alaska.

*Geology and geography:* FIELD, W. O. Glaciological research in Alaska.

STONE, K. H. Some geographical bases for planning new Alaskan settlement.

WAANANEN, A. O. The hydrology of Alaska.

*Geophysics:* KNAPP, D. G., and E. B. ROBERTS. Geomagnetism—cosmic and prosaic.

WILSON, Wm. S. The Geophysical Institute at the University of Alaska.

*Meteorology:* BENSIN, B. M. Agroclimatological investigations in the permafrost region of the Tanana valley.

*Public health and medicine:* ALTER,

A. J. Water supply problems in low temperature areas.

ALTER, A. J. Relationship of permafrost to environmental sanitation.

McCOLLUM, E. L. The psychological aspects of arctic and sub-arctic living.

*Zoology:* MURIE, O. J. Planning for Alaska's big game.

ELKINS, W. A. Pressing problems of administration of wildlife resources in Alaska.

THOMSON, S. H. Management of marine resources of Alaska.

GABRIELSON, I. N. Alaskan waterfowl and their management.

Each paper is analyzed in this Bibliography under its author's name. To most of the papers are appended selective bibliographies, which collectively present a comprehensive and concentrated record of research literature on Alaskan problems.

**ALASKAN SCIENCE CONFERENCE OF THE NATIONAL ACADEMY OF SCIENCES, NATIONAL RESEARCH COUNCIL,** *Washington, D. C., Nov. 9-11, 1950, see also Ray, L. L. Permafrost. 1951. No. 25413.*

**20119. ALASKA'S HEALTH.** v. 1, no. 1, June 1943—in progress. Juneau, Alaska, Dept. of Health, 1943-1952 *in progress*. 10 v. (unpagged through v. 6, no. 7-8)

Monthly journal issued by the Alaska Dept. of Health, "cooperating with U. S. Children's Bureau and U. S. Public Health Service." Planned as a clearing house of information for official and voluntary organizations in the field of public health and welfare in Alaska.

**File seen:** DLC (v. 1-7 only); DPHS (scattered issues)

**20120. ALASKA'S HEALTH.** Offer new anti-mosquito device for Alaska home, camp use. (Alaska's health, 1950. v. 8, no. 3-4, p. 3, diagrs.)

*Contains* description of a simple, inexpensive method developed in Alaska by the U. S. Public Health Service and known as Aerosol Spray Unit. It is especially useful for small areas where other methods are not practical. It creates a mist of insecticide which drifts over the area to be protected.

**Copy seen:** DSG.

**20121. ALASKA'S HEALTH.** Paralytic shellfish poisoning. (Alaska's health, May 1945. v. 3, no. 5, p. [6-7])

Description of the occurrence and symptoms of poisoning, also precautions

to be taken in warm months (especially in southeastern Alaska) against *Gonyaulax catenella* infestations of clams, mussels and oysters. **Copy seen:** DLC.

**20122. ALBERT 1er, PRINCE OF MONACO, 1848-1922.** Exploration océanographique aux régions polaires. (Paris. Muséum National d'Histoire Naturelle. Bulletin, 1899. t. 5, p. 6-14, illus.) **Title tr.:** Oceanographic exploration in polar regions.

Account of itinerary of the *Princesse-Alice II*, 1898, with notes on natural history and physiography of the Barents Sea, Svalbard waters and the western part of Spitsbergen. **Copy seen:** DSI-M.

**20123. ALBERTSON, NILS.** *Scorpidium turgescens* (Th. Jens.) Moenkem, en senglacial relik i nordisk alvarvegetation. (Acta phytogeographica suecica, 1940. t. 13. Västgeografiska studier tillägnade C. Skotteberg, p. 7-26, text maps) **Title tr.:** *Scorpidium turgescens* (Th. Jens.) Moenkem, a relict of the late glacial epoch in northern alvar vegetation.

**Contains** a study of the Scandinavian distribution of this moss, widely distributed in the arctic alpine regions of the so-called "alvar" vegetation of the Scandinavian Peninsula, with list of localities, including Swedish Lapland also Nordland and Tromsø in northern Norway; data on total distribution (probably circum-polar), and a list of associated plants. Bibliography (50 items). Summary in German. **Copy seen:** DA; MH-A.

**20124. AL'BOV, N. V., and V. A. KOTOVICH.** K voprosu ob izuchenii geologicheskoi struktury Onego-Dvinskogo mezhdurech'ia i levoberezh'ia r. Onegi. (Vserossiiskoe mineralogicheskoe obschestvo, Leningrad. Zapiski, 1939. Ser. 2, Chast. 68, no. 1, p. 104-111, text map) **Title tr.:** Contributions to the study of geological structure of the Onega-Dvina watershed and the left bank region of the Onega River.

**Contains** a study of geological structure of the Onega-Severnaya Dvina region, divided by the author into six groups, of which the northern group of Nenoksa (a village on the coast of the White Sea) consists of volcanic tuffs 90 meters thick; their correlation with sedimentary deposits is insufficiently studied. Summary in English. **Copy seen:** MH-Z.

the geography of N. America. 1952. No. 20178.

**20125. ALCAN INGOT.** For arctic living: specially designed structure. (Alcan ingot, Aug. 8, 1952. v. 11, no. 12, p. 4-7, illus.)

**Contains** account of a hurricane-proof tent-like structure, with a domed frame designed on geodesic principle and made of aluminum tubing, cover of orlon fabric. It provides 200 sq. ft. floor space and minimum height of 6 ft. unobstructed by tent poles or supports. Packed with erection tools, etc. in about 11 cu. ft., it weighs 140 lbs. "Weather-break" as the structure is named, is designed by J. Lindsay and T. Pope of Fuller Research Foundation for use on Baffin Island Expedition 1953 of the Arctic Institute of North America. The structure and procedure of its erection is illustrated. **Copy seen:** CA:MAI.

**20126. ALCAN INGOT.** Into the Arctic. (Alcan ingot, Jan. 1951. v. 10, no. 1, p. 4-7)

**Contains** brief sketch of an expedition to Baffin Island made in 1950 under sponsorship of the Arctic Institute of North America and headed by P. D. Baird, director of its Montreal (head) office. The activities of the Institute are described, and details given on the 1950 expedition: its personnel, equipment (particularly that of aluminum), food, etc., and some aspects of its research work. **Copy seen:** DAI.

**20127. ALEKSANDROV, A. I.** Spisok stanits i sborov, proizvedennykh v Kovdenskom zalivie s 24 iunna po 5 avgusta 1912 goda. (Akademiia nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1914, pub. 1915. T. 19, no. 4, p. xxix-xlvii) **Title tr.:** List of stations and specimens collected in Kovda Bay from June 24 to Aug. 5, 1912.

**Contains** a general description of the geography and natural history of Kovda Sound (about 66°40' N. 33° E.) Kandalakshskiy Gulf, White Sea; and a list of 84 stations established there in 1912, with their locations, depth, bottom

samples and names of marine plants and animals collected on each station.

**Copy seen:** DLC; MH-Z.

**20128. ALEKSANDROVA, V. D.** Ras-titel'nost' Grenlandii. (Priroda, Oct. 1951, v. 40, no. 10, p. 61-65, illus.) **Title tr.:** Vegetation of Greenland.

Contains a sketch of the vegetation generally and description of three vegetative zones: (1) forest-tundra in the southwestern part of Greenland, (2) tundra zone and (3) arctic deserts in the northern section, with lists of typical plants and characteristics of each zone.

**Copy seen:** DLC; MH.

**20129. ALEKSEEV, NIKOLAI NIKOLAEVICH.** Ostrov Vrangeli. (Akademika nauk SSSR. Dal'nevostochnyi filial, Vladivostok. Vestnik, 1932, no. 3-4, p. 82-86, map) **Title tr.:** Wrangel Island.

Contains historical data on the discovery of Wrangel Island: DeLong's expedition in the *Jeannette* 1867, Vrangeli, in 1828, Stefansson's Canadian Arctic Expedition in 1913, the *Vatgach* in 1914; diplomatic struggles concerning sovereignty of the island; brief physical and geographic notes. **Copy seen:** MH-A.

**20130. ALEKSEEV, M. S.** Sovremennoe polozhenie rybnol'noy promyshlennosti na Dal'nem Vostoke i ee blizhalshie perspektivy. (In: Dal'ne-Vostochnyy kray. Upravlenie rybolovstva i okhoty na morskogo zveria. Rybnye i pushny bogatstva Dal'nego Vostoka, 1923, p. 1-133, illus., tables, diagrs.) **Title tr.:** Present-day condition of fisheries in the Far East and their immediate prospects.

Contains list of decrees regulating the fishing and whaling industries of the area; data for a varying number of years on amounts of fish caught, preserved, exported; number of fishermen; canning industry, etc. of the Far East, including Alaska, Kamchatka and the Okhotsk Sea coast; the activities of the Japanese in this area; fish production of other countries; exports and imports; world trade.

**Copy seen:** DLC.

**20131. ALENITSYN, V. D.** Voguly. (In: Entsiklopedicheskiy slovar', 1890-1904, v. 6a, p. 704-705) **Title tr.:** The Voguls.

Contains account of this disappearing tribe ("about 6500") of Finnic origin living on the Ural Mountain slopes, and in Tobol'sk and Perm provinces; early

Russian colonization of their territories; their enforced migrations, their nomadic and settled groups; various tribal names; their racial, cultural and linguistic relationship to Magyar tribes; their comparatively highly developed culture: legends, songs, story-telling; their mode of living: fishing and hunting; social organization, villages, dwellings and clothing; their domestic animals: dogs and reindeer; their psychological characteristics and affinity with the Russian type and way of life; their trading and fairs; forced christianization and religious beliefs; their economic prosperity, literary development, assimilation with Russians.

**20132. ALEXANDER, CHARLES PAUL, 1889-** Dipterous insects of the family Tipulidae from the Pribilof Islands, Alaska. (In: Hanna, G. D., and others. Insects of the Pribilof Islands, Alaska, 1921. p. 183-84)

Contains a report on two kinds of these flies; one of them "believed to be a new species", *Tipula (Nesotipula) pribilovia* n. sp., is made the type of a new subgenus: *Nesotipula*.

**Copy seen:** DSI-M.

**20133. ALFERAKI, SERGEI NIKOLAEVICH, 1850-1918.** Gusi Rossii. Moskva, Tipo-lit. I. N. Kushnerev, 1904. 7, 189 p. illus., 25 color plates. **Title tr.:** The geese of Russia.

A comprehensive and handsomely illustrated monograph on these birds in Russia. Following an introductory chapter on the morphology and biology of the group, and a key to the species dealt with, are sections dealing with individual forms; each section includes a general description of the species, common (including English and American) and scientific terminology; detailed description of adults and young; morphometry; geographical distribution; nests, food, etc. A considerable proportion of the species described occur in arctic regions. The account concludes with a chapter (p. 177-83) on the eggs of Russian geese, by G. F. Gëbel, and (p. 84-89) excerpts from a diary written on Kolguev Island in 1902 by S. A. Buturlin. Bibliographical footnotes.

**20134. ALFKEN, J. D.** Beitrag zur Kenntniss einiger Bienen Finnlands. (Notulae entomologicae, 1924. Årg. 4, häft. 2, p. 33-40) **Title tr.:** A contribution to the knowledge of some bees of Finland.

Contains a study of geographic races and aberrations of some bees native to Finland, with descriptions of two new species and one variety and critical notes on some other species, including *Megachile analis* var. *obscura* occurring in Finnish Lapland. **Copy seen:** MH-Z.

**20135. ALFTHAN, A. E.** Hafsutterns och pelssälens geografiska utbredning. Helsingfors, 1903. 32 p. table. (Geografiska föreningen i Finland. Meddelanden, 6:12) **Title tr.:** The geographic distribution of the sea otter and the fur seal.

Contains an account of the hunting of sea otters (*Enhydra marina*) in the Bering Sea region, commencing with the Japanese (supposedly some thousand years ago) and continuing to 1901, when extinction of the species was feared. Also an account of the fur seals (*Otaria ursina* and *Arctocephalus australis*) believed to have immigrated from the Antarctic to the northern Pacific, the Commander and Pribilof Islands. The unrestricted hunt for them in southern and northern hemispheres, the Russian-American Company's restrictions of 1842 and their beneficial effect, the dangers of "pelagic sealing" and the restrictions on it, insufficiency of protective measures, etc., are discussed. The total catch of fur seals 1746-1901 and of sea otter 1891-1901 are presented in tabular form. Bibliographical footnotes. Summary in English.

**20158. ALTER, AMOS J.** Arctic sanitary engineering. Washington, D. C., Federal Housing Administration, 1950. 2 p.l.,

IV, ii, 106 p., incl. 60 plates (illus. maps, fold. table, diags.)

*Contains* study (by the director of Division of Sanitation and Engineering, Territorial Dept. of Health, Juneau) of "sanitary engineering as it applies to water supply, sewage disposal and garbage and refuse disposal . . . in regions where the subsoil remains continuously frozen . . . based on the latest data available . . . actual observations and practical experience . . . of the Alaska Department of Health personnel . . . reports and literature including Canadian, Russian and American sources."

Introductory material on low temperature effects on biological, physical and chemical reactions, on seasonal sunlight, and effective use of resources and materials. Discussion of surface, supra-, intra-, and sub-permafrost water supplies; water treatment including structures, aeration, chemical mixing, sedimentation, filtration, water softening and corrosion control; water distribution by tank truck, seasonal systems, utilidor, and preheating and recirculation systems; sewage disposal and treatment in all its aspects; and garbage and refuse disposal. Notes on utility construction costs. Bibliography (62 items). *Appendices:* (a) Permafrost area of Alaska. (b) Arctic sewage disposal practice. (c) Alaska climatological data. (d) Heating devices for sanitary facilities.

" . . . The possible sources of water in Arctic regions are melted snow and ice, surface water, suprapermafrost ground water, intrapermafrost artesian water, and subpermafrost water. Community water supplies are usually treated chemically or by settling and distributed in pipes placed in heated conduits. Sewage in small communities is usually collected into barrels and dumped on the tundra. In larger communities sewage system pipes are placed in heated conduits, or utilidors. Such sewage is usually disposed by dilution in larger water courses and tidal waters. Several sewage treatment plants have been built in larger communities. Garbage and refuse are collected and disposed in dumps or tidal waters. It is not practical to bury garbage."—SIPRE.

**Copy seen:** DLC.

**20159. ALTER, AMOS J.** Arctic trichinosis. Report on garbage disposal in permafrost areas II, for the Subcommittee on Waste Disposal. (National Research Council. Committee on Sanitary Engi-

neering and Environment. Bulletin, 1950. p. 449-57, illus., tables)

Author stresses the fact that many cases of trichinosis have been reported from the Arctic. Improper garbage and waste disposal and the habits of man, dog and bear offer ample opportunity for trichinae to change hosts. Though it is not proven how trichinosis spreads in the Arctic "the implications are sufficient to assume that man becomes infested by eating the infested meat of land or sea mammals. The recommendations include further study of the life cycle and transmission methods of *Trichinella spiralis*, and arctic meat storage and cooking methods. It is also recommended that garbage and refuse storage, collection and disposal be made inaccessible to land and sea carnivora."—from summary, also SIPRE.

Copy seen: DSG.

**20160. ALTER, AMOS J.** Relationships of permafrost to environmental sanitation. (In: Alaskan Science Conference . . . 1950. Selected papers, 1952. p. 240-53 incl. graph, diagr.)

"Areal extent, continuum, temperature, depth, and type of permafrost have a direct effect upon selection of sanitary measures and facilities in low temperature regions. The effects of permafrost on environmental health control measures and facilities are described. Inadequate drainage caused by permafrost results in breeding areas for insects. Inexpensive refrigeration for food is provided by ice cellars dug in permafrost."—SIPRE. Bibliography (31 items).

Copy seen: DAI; DLC.

**20161. ALTER, AMOS J.** Water supply in Alaska. (American Water Works Association. Journal, June 1950. v. 42, p. 519-32, illus.)

Contains note on physiography and population of Alaska; analysis of water supply in the Pacific mountain, central plateau, and arctic slope regions, including comment on permafrost problems; and a discussion (in some detail) of protection of equipment and installations in permafrost conditions, distribution system problems, and construction costs.

"The main water sources of the Pacific Mountain region of Alaska are mountain streams and lakes fed from rain and snow. Less than 25 per cent of the supplies are chlorinated. Satisfactory water supplies in the Central Plateau and the Arctic Slope regions are limited because surface supplies freeze, and much of the ground

water is in a frozen state. Suprapermafrost water may be obtained through bored, dug or driven wells, or infiltration galleries, but the supply is irregular and often insufficient. Intrapermafrost water may be tapped by using drilled or thawed and jetted wells, but the occurrence of such sources is rare and unreliable. Sub-permafrost water is difficult to locate, expensive, and often highly mineralized. Special provision must be made for the distribution of water in permafrost regions. Water may be heated and circulated in the distribution systems, or it may be distributed from mains placed in heated conduits."—SIPRE.

Copy seen: DLC.

**20162. ALTER, AMOS J.** Water supply problems in low temperature areas. (In: Alaskan Science Conference . . . 1950. Selected papers, 1952. p. 219-39 incl. tables, graphs, diagrs.)

"Melted ice and snow are the most common sources of water in low temperature regions [north of 58° N. lat.]. Sub-permafrost water sources such as deep wells are dependable water supply sources. Various water distribution systems with necessary precautionary measures are described. Utilidors are constructed of wood or concrete which are placed in conduits heated by warmed air or steam. Recirculating water mains are constructed to form a closed circuit and heating plants are placed near the point where the water enters the system. Methods of weather-proofing well-houses in the arctic are given. Temperature has an appreciable effect on practically all water treatment processes. Water supply structures are designed to minimize the effects of unstable soil conditions."—SIPRE.

Copy seen: DAI; DLC.

**20163. ALTER, AMOS J.** Water supply problems of the Arctic. (Alaska's health, 1949. v. 7, no. 3, p. 1-3)

Contains sections on: permafrost and water supply; water and the development of permanent communities; lake water; ground water; water distribution systems (including utilidors and recirculating systems); need for research.

**Contains** figures (absolute and percentage), on the industrial production, its value and increase; number of workmen, etc., employed in the following industries: fishing and whaling, mining and chemicals, forest and timber, boat-building, brick-making and several minor branches of industry. **Copy seen:** DLC.

**20167. ALYMOV, V. K.** Sovremennoe sostoiânie olenevodstva na Kol'skom poluostrove. (Sovetskaiâ Aziâ, 1928. god 4, no. 4, p. 84-90) **Title tr.:** The present state of the reindeer breeding on the Kola Peninsula.

**Contains** an economic survey of the reindeer industry, in decline in this region since World War I: 74,000 head in 1914, only 49,500 in 1927; reindeer are the source of maintenance of 348 Lappish families, 108 Zyryan, 707 Russian, 26 Samoyedic, and 137 of other nationalities. The best off are the Zyryans averaging 161 head of reindeer per family, then follow Samoyeds (83 head) and Lapps (66 head); other statistics for 1927 are compared with those of previous years.

**20168. AMALITSKIÏ, VLADIMIR PROKHOROVICH, 1860-1917.** Dnevnik nablûdeniï po maloi Severnoi Dvine;

s kratkoi biografiei avtora. Leningrad, izd-vo Akad. nauk, 1931. 57 p., illus., plate, tables. (In: Amalitskii, V. P., and P. A. Pravoslavlev. Severo-Dvinskii raskopki, no. 6) **Title tr.:** Diary of observations along the Little Northern Dvina; with a short biography of the author.

**Contains** (p. 5-12) a biography written by A. P. Karpinskii on the occasion of the 70th anniversary of Amalitskii's birth, with a list of his publications (39) 1884-1927. The "diary" (p. 13-57) written between 1910 and 1914 is a summary account of the area where Amalitskii and his party excavated for several years apparently beginning in the summer of 1899. The extensive materials collected were taken to Warsaw University where Amalitskii was professor and later (from 1908) transferred to the Russian Academy of Sciences where (in 1931) they formed the Northern Dvina Gallery in the Academy's Paleontological Museum. This "diary" (p. 13-57) deals largely with the stratigraphy and paleontology of the river's bed and vicinity. It includes a general description of the river; its extent; amount of water; depth and course; banks and their character, structure and terraces; and settlements. This is followed by a detailed description of a series of profiles of the right bank and a few of the left. The account of each profile usually contains data on its location, morphology, altitude, incline and a detailed stratigraphy giving the thickness, petrological character of the layers and their paleontological inclusions. Islands of the river are also dealt with, and in some cases the surface soil and vegetation of the banks.

**20181. AMES, ADELBERT, III, and others.** A study of various methods of rewarming men after exposure to extreme cold. (Federation proceedings, Mar. 1948. v. 7, p. 2-3) **Other authors:** R. S. Griffith, D. A. Goldthwait, M. B. Macht, and H. S. Belding.

Contains an abstract of a study on the efficiency of rewarming individuals exposed for one hour to -40° F., as determined by oxygen consumption, skin and rectal temperature, thermal comfort and onset of shivering. Seven means of rewarming were used: (1) strenuous exercise, (2) ambient temperature of 90° F., (3) sleeping bag, (4) ambient temperature of 40° F., (5) moderate exercise, (6) irradiation of face, and (7) of hands. They proved efficient in that order. The way of action of these various means of rewarming is discussed.

**20182. AMOROSO, E. C., and others.** Reproductive organs of near-term and new-born seals. (Nature, Nov. 1951. v. 168, no. 4279, p. 771-72, illus.) **Other authors:** R. J. Harrison, L. Harrison Matthews and I. W. Rowlands.

Contains a report on macro- and microscopical examinations of the reproductive organs of near-term and full-term fetuses, and new-born and recently born seal pups of both sexes. Three arctic and 3 antarctic species were studied. The findings were essentially similar in all species, and showed a remarkable enlargement of the gonads of all near-term fetuses and new-born pups of both sexes. Details on the hypertrophied tissues and organs are presented and compared with conditions in other species. The causative effect of hormones in this hypertrophy, is discussed. *Bibliography* (14 items).

**20201. ANDERSON, HENRY W.** Soil freezing and thawing as related to some vegetation, climatic, and soil variables. (Journal of forestry, 1947. v. 45, p. 94-101, tables, diagr.)

**Report** on a study (made at Northfork, Calif. 37° N. lat., elevation 2750 ft.) of freezing under brush-cover, a light grass cover and in bare soil. The brush cover and (less so) the grass cover decreased the duration, depth and number of freezes, delayed the first occurrence and advanced the last date of freeze, as compared with bare soil. Freezing kept the surface

soil wet thus increasing evaporation during dry periods and causing erosion during rainstorms. "... Variables significant to the freezing depth were: (1) product of the duration of freezing temperatures and the difference between minimum temperature and 32° F., (2) minimum air temperature during the freezing period, (3) duration of freezing temperatures, (4) ½ in. minimum soil temperature, (5) soil temperature gradient, (6) soil moisture, and (7) snow cover. Variables affecting thawing rates were: (1) solar radiation, (2) the product of the duration of freezing temperatures and the difference between maximum temperature and 32° F., (3) cloud cover, and (4) 12-in. minimum soil temperature. The freezing of bare soil is related to high surface soil moisture, high evaporation rates, and high surface runoff and erosion." —SIPRE. Bibliography (23 items).

**20202. ANDERSON, JACOB PETER, 1874-1953.** Alaska and Yukon species of *Rubus* subgenus *Cylactis* Focke. (Torrey Botanical Club. Bulletin, May 1947. v. 74, p. 255-56)

**Contains** a key and discussion of the controversy over species in this genus, giving author's opinion that *R. arcticus* does occur in North America and *R. acaulis* is a synonym; and *R. alaskensis* is a good species. Five species occur in regions discussed. **Copy seen:** DA; DLC.

**20203. ANDERSON, JACOB PETER, 1874-1953.** A comparison of the flora of Iowa with that of Alaska and Yukon. (Iowa Academy of Science. Proceedings, 1949. v. 56, p. 101-105)

**Contains** note and tabular data showing 121 families of vascular plants in Iowa, of which 67 are found also in the North; also six families found in the North but not in Iowa. **Copy seen:** DLC.

**20204. ANDERSON, JACOB PETER, 1874-1953.** Flora of Alaska and adjacent parts of Canada; an illustrated and descriptive text of all vascular plants known to occur within the region covered. Part VIII-IX. (Iowa State College journal of science, 1950-52. v. 25, p. 219-71, 5 plates; v. 26, no. 3, p. 387-453, 5 plates)

**Contains** description and morphology of the genera and species of the following families (pt. 8): Gentianaceae; Apocynaceae; Polemoniaceae; Hydrophyllaceae; Boraginaceae; Lamiaceae; Scro-

phulaceae; Lentibulariaceae; Orobanchaceae; Plantaginaceae; Rubiaceae; Caprifoliaceae; Andoxaceae; Valerianaceae; Campanulaceae. Part 9: Chicoriaceae (Chicory family) and Asteraceae (Aster family). Data on geographical distribution are offered. For parts I-VII of this work, see *Arctic Bibliography*, No. 441. **Copy seen:** DA.

**20205. ANDERSON, JACOB PETER, 1874-1953.** Notes on Alaskan rust fungi. (Torrey Botanical Club. Bulletin, May 1940. v. 67, p. 413-16)

*Contains* annotated list of two species new to North America, 22 new to Alaska, 19 occurring on host plants not previously reported as infected in Alaska, and 13 species with extended range.

**Copy seen:** DA; DLC.

**20206. ANDERSON, JACOB PETER, 1874-1953.** Notes on the flora of Sitka, Alaska. (Iowa Academy of Science. Proceedings, 1916. v. 23, p. 427-82, 16 plates)

*Contains* notes on vegetation in general, and on flowering plants of the seashore, grasslands, forest and fresh waters in the vicinity of Sitka; section on economic plants (trees, forage and fruit-bearing) and on the powdery mildews (Erysiphaceae) and the rusts (Uredinales).

**Copy seen:** DLC.

**20207. ANDERSON, JACOB PETER, 1874-1953.** Papers on the flora of Alaska—I. The genus *Cicuta*. (Torreya, Nov.-Dec. 1943. v. 42, p. 176-78)

*Contains* data on occurrence in Alaska of the poisonous plants, *C. maculata* and *C. mackenziana*, and in Southeast Alaska of *C. douglasii*, with note on distinguishing characteristics.

**Copy seen:** DA; DLC.

**20208. ANDERSON, JACOB PETER, 1874-1953.** Plants of southeastern Alaska. (Iowa Academy of Science Proceedings, 1918. v. 25, p. 427-49)

*Contains* annotated list of 23 species of ferns and fernlike plants, seven trees, and about 400 species of flowering plants collected in many localities in the vicinity of Sitka, Juneau, the Taku River, and Lynn Canal.

**Copy seen:** DA; DLC.

**20209. ANDERSON, JACOB PETER, 1874-1953.** Supplemental list of plants from southeastern Alaska. (Iowa Academy of Science. Proceedings, 1919. v. 26, p. 327-31)

Annotated list of four species of ferns and fernlike plants, two trees, and 75 species of flowering plants determined from Haines and Skagway at the head of Lynn Canal. **Copy seen:** DLC.

**20210. ANDERSON, SVEND T., and T. P. BANK II.** Pollen and radiocarbon studies of Aleutian soil profiles. (Science, July 25, 1952. v. 116, no. 3004, p. 84-86, illus., table)

*Contains* a study aimed to contribute toward a chronology of postglacial events in the area, offering correlative data for geology, biology and anthropology. The stratigraphy of non-archeological profiles is given; in the archeological sites, lensing was found to be extremely complicated, indicating a much longer human occupation than anticipated. Pollen analyses of soil samples from several areas are presented and discussed; they indicate changes in the plant communities due probably to climatic variation. By correlating the above studies with those from archeology and radiocarbon dating it is expected to obtain a picture of living conditions existing at the time of the ancient Aleut settlements. The study is based on field work during expeditions of 1948-51, sponsored by the University of Michigan Botanical Gardens and Museum of Anthropology. Bibliography (6 items).

**"Measurements** were made of the thickness, hardness and density of snow cover during the winter of 1949-50 in Finland. Drift formations were observed throughout Finland. Depth measurements were made with a wooden pole calibrated in cm. Special scales were used to determine density and hardness of snow cover. Snow was classified into small, medium and big grains, each being either light, soft, hard or very hard. Maximum snow depth in southern and middle Finland ranged from 2-34 cm. and from 25-53 cm. in northern Finland. Minimum values in southern and middle

Finland were 1-7 cm. and in northern Finland 2-15 cm. Maximum density in southern and middle Finland ranged from 0.29-0.60 and in northern Finland from 0.23-0.63. Minimum density in southern and middle Finland ranged from 0.10-0.28 and in northern Finland from 0.05-0.23. The hardness of snow cover ranged from 11-656 gr./cm.<sup>2</sup> depending on location and on type of snow. Snow has a higher hardness value in southern and middle Finland than in northern Finland."—SIPRE.

Similar observations were made (1) during 1948-49 and reported in this journal v. 39, p. 369-72, 1949, where description of method and instrumentation is given; (2) during 1950-51 and reported in this journal v. 41, p. 406-409, 1951.

Contains a bibliography of works published in *Forhandlinger and Skrifter* series of the Royal Norwegian Scientific Society of Trondhjem for ten years (1926-36) arranged alphabetically with a subject index (p. 33-51) based on the decimal system of classification. Includes many papers with arctic material. *Copy seen*: MH.

**20237. ANTEVS, ERNST, 1888-** . Correlation of Wisconsin glacial maxima. (American journal of science, 1945, v. 243A, p. 1-39.) "A study of fluctuations of North American ice-sheets due to interaction with tracks of depressions. Glaciation started on mountains of west Canada and spread over plains to east, fed by depressions crossing Rocky Mountains (depressed 2,000-3,000 feet) between 54° N. and St. Elias Range. This and Scandinavian ice displaced Icelandic low southwards and NE winds caused glaciation of Labrador. Southward shifting tracks and permanent Aleutian low caused glaciation and pluvial period in western U.S.A., but starved northern ice-sheets causing regression followed by regeneration." — *Meteorological abstracts and bibliography*, July 1950, v. 1, no. 7, p. 463. *Copy seen*: DLC.

**20238. ANTIPIN, V. M.** K voprosu o migratsii lastonogikh po sushe. (Priroda, 1949; no. 9, p. 77-78.) *Title tr.*: On migration of marine mammals on dry land.

Contains literature data and observations of the author on the ability of some marine mammals (seals, walruses, sea-lions, etc.) to migrate on the dry land; all data refer to Novaya Zemlya, Kolguyev Island and Kamchatka.

*Copy seen*: MH.

**20239. ANTONOV, V. S.** O roli rek v rezhime Arkticheskikh morei. (In: Vsesoŭŭznyiĭ geografičeskiiĭ s"ezd. 2d, Leningrad, 1947. Trudy, t. 2, pub. 1948, p. 307-314, incl. tables, maps)

"The drainage of the Asiatic continent into arctic seas amounts to approximately 2,509 cu. km. The fresh-water flow is highest into the Kara Sea area and least into the Chukchi Sea. About 80 per cent of the fresh water flows into the Arctic Ocean during the spring and sum-

mer months, reaching a maximum in July. The action of the fresh water on the régime of arctic seas is four-fold: it accelerates ice melting during spring and summer; it facilitates the removal of ice from areas adjacent to river outlets; it leads to the accumulation of heat and subsequent delay in fall and winter freezing; and it accelerates the freezing later due to decreased salinity in surface waters."—SIPRE. *Copy seen*: DLC.

**20240. ANTROPOVA, V. V.** K istorii arkhéologicheskogo izučeniia Kamchatki. (Akademiia nauk SSSR. Muzei antropologii i étnografii. Sbornik, 1949. t. 11, p. 380-94, illus., map) *Title tr.*: To the history of the archeological exploration of Kamchatka.

Contains description of archeological objects (stone axes, arrowheads, etc.) from Kamchatka, preserved in the State Museum for Ethnography in Leningrad and the Ethnographical Museum of the Academy of Sciences U.S.S.R. Notes are added on the archeological excavations made by V. I. Jochelson in 1910-11 (while on the Riâbushinskii expedition), by Sten Bergman's Swedish botanical expedition in 1920-22, and by the Japanese scholars Yamada Sigekura and Nakayama in 1923-28 and 1932-33 respectively. *Copy seen*: DLC.

**20241. ANTROPOVA, V. V.** Rasselenie itel'menov v pervoi polovine XVIII v. (Vsesoŭŭznoe geografičeskoe obščhestvo. Izvestiia, 1949. t. 81, no. 4, p. 414-19, map, tables) *Title tr.*: Settlements of the Kamchadals in the first half of the 18th century.

Contains introductory sketch and tables based on the work of Krashenninnikov (see *Arctic Bibliography* No. 9265 and No. 9267), a participant in Bering's Great Northern Expedition. The tables give the location and official names of the settlements and their Russian, native and other equivalents. *Copy seen*: DLC;

**20242. ANTROPOVA, V. V.** Starinnye kamchadal'skie sani. (Akademiia nauk SSSR. Muzei antropologii i étnografii. Sbornik, 1949. t. 10, p. 47-92, 22 illus., fold. plate) *Title tr.*: The old Kamchadal sledge.

Contains an ethnographical study on the traditional dog sledge: its construction and use, technique of harnessing, measurements, ornamentation, etc. This type of sledge is no longer in use among the

Kamchadals. The paper is based on museum specimens and the literature.

**Copy seen:** DLC.

**20243. ANUCHIN, DMITRIĬ NIKOLAEVICH, 1843-1923.** Giliaki. (*In: Ėnsiklopedicheskii slovar'*, 1890-1904. v. 8a, p. 686-88) **Title tr.:** The Gilyaks.

Brief article on this isolated group (about 7000) scattered along lower Amur basin and estuary, in the Okhotsk coastal region and northern Sakhalin Island; their origin and racial affiliation with Tungus and Ainu; etymology of their name; racial types; peculiar language characteristics; fishing, trapping, hunting and sealing; produce of grain and potatoes, nuts and berries; their plank dwellings and storehouses; communal way of life; clothing and ornamentation; weapons and implements; boats, skis, sledges and transport dogs; their domestic life, and welfare; attitude to children; marriage and divorce; laws and social organizations; religious beliefs, ceremonials and festivals; their relatively undeveloped culture; shamanism, primitive music, folklore, etc.

**Copy seen:** DLC.

**20244. ANUCHIN, DMITRIĬ NIKOLAEVICH, 1843-1923.** Samoyedy. (*In: Ėnsiklopedicheskii slovar'*, 1890-1904. v. 28a, p. 244) **Title tr.:** The Samoyeds.

Contains brief account of this Ural-Altaic people (about 2000) distinct from the Finns racially and linguistically, and living in Arkhangel'sk Province and Siberia in the lower Ob' and Yenisey River basins and the Khatanga estuary; etymology of their name "Saami"; their origin and relationship to Tatars and other tribes; their wars and migrations; racial types and dialects; their nomadic way of life, fishing, sealing, hunting and reindeer-breeding; their huts, clothing and food; their psychological characteristics, religion and shamanism; their low economic standard. **Copy seen:** DLC.

**20245. ANUCHIN, V. I.** Ocherk shamanstva u eniseiskikh ost'akov; s risunkami v tekste, ispolnennymi khudozhnikom S. M. Dudinyam. 90 p., 115 illus. (Akademiia nauk SSSR. Muzei antropologii i etnografii. Sbornik, 1914. t. 2, vyp. 2) **Title tr.:** Essay on shamanism among the Yenisey-Ostyaks, with drawings in the text by the artist S. M. Dudin.

Contains a monographic study on the Yeniseian beliefs (gods and spirits, origin of man, soul and life, death, life after

death, the universe, heavenly bodies, animals and plants); and on the shaman and shamanistic ritual, with description of shamanistic garments, ornaments and utensils, his drum, crown, weather-cock flag, etc., with text illus. The author was sent by the Russian committee for investigation of Central and Eastern Asia to the Turukhansk region and worked there in 1905-1908. He explored the Yeniseian ethnology, anthropology and language, and made collections for the Museum of Anthropology and Ethnography. He met all the Yeniseian shamans (three of high rank, having all the shamanistic paraphernalia, and eleven of lower rank), attended 22 performances, therefore, was able to present first-hand material.

**Copy seen:** DLC.

**20246. APPALACHIA.** An expedition to Baffin Island. (Appalachia, June 1950. v. 28, p. 98)

Brief note announcing the Baffin Island Expedition of the Arctic Institute of North America in the summer of 1950, under the leadership of P. D. Baird.

**Copy seen:** DGS.

**20247. APPALACHIA.** French expedition to Greenland. (Appalachia, Dec. 1948, June 1949, June 1950. v. 27, p. 232-33, 359; v. 28, p. 98-99). News notes on the Paul-Émile Victor expeditions of 1948 and 1949.

**Copy seen:** DGS.

(not photographically) from utensils and clothing of these and other tribes native in that region. *Copy seen:* DLC.

**20250. APPLETON, V. B.** Observations on deficiency diseases in Labrador. (American journal of public health, July 1921. v. 11, p. 617-21).

*Contains* notes (based on a survey in 1919-20) on the diet of Eskimos living along the Labrador coast of the Strait of Belle Isle, occurrence of deficiency diseases among these people, and their susceptibility to infection.

*Copy seen:* DLC.

**20251. APPLEWHITE, K. H., and C. N. SMITH.** Field tests with mosquito and sand fly repellents in Alaska. (Journal of economic entomology, June 1950. v. 43, p. 353-57).

*Contains* results of tests made in 1948 in several Alaskan localities, with "ten repellents used as 25 percent solutions on the skin . . . with thirty-five materials applied to fabrics," ten of which were found effective against mosquitoes after four rinsings and sixteen hours of wear. The work was conducted under funds allotted by the National Military Establishment to the Bureau of Entomology and Plant Quarantine.

*Copy seen:* DLC.

**20252. APPLEWHITE, K. H., and H. F. CROSS.** Further studies of repellents in Alaska. (Journal of economic entomology, Feb. 1951. v. 44, p. 19-22).

*Contains* results on effectiveness of several repellents against mosquitoes and sand flies, applied to the skin and to fabric of uniforms in 1949. Against mosquitoes, a mixture containing dimethyl carbate was most effective for skin; against sand flies, dimethyl phthalate.

*Copy seen:* DLC.

**APPLEWHITE, K. H.,** *see also* Gjullin, C. M., & others. Tests with DDT control black fly larvae. 1950. No. 22128.

**APPLEWHITE, K. H.,** *see also* Travis, B. V., & others. Control of mosquito larvae in Alaska with DDT. 1950. No. 26793.

**20253. ARCHITECTURAL RECORD.** T.B. hospital for Alaska designed for conversion. (Architectural record, July 1950. v. 108, no. 1, p. 160, 162).

*Contains* technical details of a new structure at Anchorage designed for the

Alaska Native Service, U. S. Bureau of Indian Affairs. *Copy seen:* DLC.

**20254. ARCTIC.** The Alaskan Science Conference. (Arctic, May 1951. v. 4, p. 57-61).

*Contains* the general recommendations, those pertaining to international cooperation, specific recommendations, and final resolutions, resulting from a conference sponsored by the National Academy of Sciences and National Research Council, held in Washington, D. C., Nov. 9-11, 1950. *Copy seen:* CaMAI; DLC.

**20255. ARCTIC.** Discovery of Russian hydrographic bottles and barges off West Greenland. (Arctic, July 1952. v. 5, no. 2, p. 129-30).

*Contains* information supplied by Dr. Trevor Lloyd regarding: two Russian hydrographic bottles found off West Greenland in 1951, and presumably released in 1946; also two wooden barges with Russian names found in Davis Strait; these were presumably Siberian river barges, frozen and carried by the outgoing ice into the sea. Driftwood of Siberian origin is quite common on the Greenland coast according to the informant.

*Copy seen:* DLC.

**20256. ARCTIC.** Geographical names in the Canadian North. (Arctic, July 1952. v. 5, no. 2, p. 132).

*Contains* a list of 25 names and name changes adopted by the Canadian Board of Geographical Names for official use, and referring to 8 mi. to 1 in. map sheets: Amundsen Gulf, 97° N. W. and 97° N. E.; Melville North, 47° S. W. and 47° N. E. Approximate geographical position of the places listed, are given. *See also* No. 21091-21092.

*Copy seen:* DLC.

**20257. ARCTIC.** Hydrographic expedition to the Beaufort Sea. (Arctic, Sept. 1951. v. 4, no. 2, p. 138).

*Contains* news note on the voyage of Canadian Defence Research Board's vessel C. G. M. V. *Canolm II* to the Canadian Western Arctic in summer 1951. Personnel of the expedition led by T. H. Manning, its program (oceanographic, fisheries, zoological and geodetic work), data on the vessel, etc., are given.

*Copy seen:* CaMAI; DLC.

**20258. ARCTIC.** Hydrographic work carried out by the *Canolm* expedition. (Arctic, Mar. 1952, v. 5, no. 1, p. 58).

*Contains* a note on the work of a nine-

man party led by T. H. Manning on the *Cancolim* 11 July–Sept. 1951; this included hydrographic and oceanographic investigations in the coastal waters of Beaufort Sea; collection of marine specimens, birds and mammals; establishment of astronomical control points, etc.

*Copy seen:* CaMAI; DLC.

**20259. ARCTIC.** Lincoln Ellsworth, 1880–1951 [with] an appreciation by Sir Hubert Wilkins. (Arctic, Sept. 1951. v. 4, no. 2, p. 142–43).

*Contains* outline of Ellsworth's life and expeditions (including north polar flights), with a tribute to his character and achievements, by an associate in his Antarctic exploration.

*Copy seen:* CaMAI; DLC.

**20260. ARCTIC.** 1951 projects of the Arctic Research Laboratory, Point Barrow. (Arctic, Mar. 1952. v. 5, no. 1, p. 60–61).

*Contains* note on 18 projects with the names of participants of each project, the institution they represent and the problems studied. The latter include zoology, botany, ecology, plant geography, vitamin research, geology, permafrost, etc.

*Copy seen:* DLC.

**20261. ARCTIC.** The Stefansson Library. (Arctic, Mar. 1952. v. 5, no. 1, p. 61).

Note on establishment at Dartmouth College, Hanover, N. H., of the Vilhjalmur Stefansson collection of polar and permafrost materials formerly in New York.

*Copy seen:* CaMAI; DLC.

**20262. ARCTIC.** Trichinosis from polar bear meat. (Arctic, 1948. v. 1, p. 144)

*Contains* an account of an outbreak that occurred in 1944 in a group of Germans who had established a weather station in Franz Josef Land. The attacks followed the eating of polar bear meat infected with trichinae. This led to the examination at the Norwegian Veterinary Institute of specimens of seven polar bears obtained at Svalbard. All of them contained trichinae. *Copy seen:* DLC.

**20263. ARCTIC CIRCULAR.** Arctic dog disease, and Reports of arctic dog disease. (Arctic circular, Mar. 1951. v. 4., p. 47–49).

*Contains* directions for shipping specimens and precautions recommended in dealing with rabies or the distemper-type sickness occurring in northern dogs; with

reports on outbreaks of disease in Hebron and Nain, Labrador, 1949–50.

*Copy seen:* CaMAI; DLC.

**20264. ARCTIC CIRCULAR.** Arctic mail. (Arctic circular, Feb. 1951. v. 4, p. 33–35).

*Contains* practical, detailed information on distribution points, and postage rates for all classes of mail to the Canadian Arctic.

*Copy seen:* CaMAI; DAL.

**20265. ARCTIC CIRCULAR.** The beluga fishery at Churchill. (Arctic circular, Oct. 1952. v. 5, no. 5, p. 53–56)

*Contains* account (based on notes of Dr. K. H. Doan, Central Fisheries Research Station) of the white whale (*Delphinapterus leucas*), numerous though transient at the influx of the Churchill River into Hudson Bay. Its use for oil, food and dog food; attempts at commercial fishery 1929–30, and since 1949–; methods of taking and processing; tabulation of catch and products 1949–51; efforts to control hunting and protect the beluga.

*Copy seen:* CaMAI; DLC.

**20266. ARCTIC CIRCULAR.** The coming of representative government to the Northwest Territories. (Arctic circular, Dec. 1951. v. 4., no. 6, p. 78–83)

*Contains* review of administration of the territorial government from 1905 to the amendment of Northwest Territories Act June 15, 1951; expansion of the council and provision for three elected members; economic development resultant from oil and mineral discoveries and the fishing industry; Yellowknife and its local government.

*Copy seen:* CaMAI; DLC.

**20267. ARCTIC CIRCULAR.** Conference on Eskimo affairs. (Arctic circular, Apr.–May 1952, v. 5, no. 4, p. 41–43; reprinted in Arctic, Oct. 1952, v. 5, no. 3, p. 193–95)

*Contains* a brief report on a conference of government, church and Hudson's Bay Co. representatives held in Ottawa May 19–20, 1951, Major-General H. A. Young, Commissioner of the Northwest Territories, presiding. The economic plight of the Eskimos, fur trade and other employment conditions, effects of government social assistance, health (especially the spread of tuberculosis), education, and crime were discussed and suggestions made. A continuing committee, under H. A. Young, was appointed to study the problems. *Copy seen:* CaMAI; DLC.

**20268. ARCTIC CIRCULAR.** Exercise "Eager Beaver." (Arctic circular, Feb. 1952. v. 5, no. 2, p. 22)

*Contains* news note on a combined exercise of U. S. and Canadian Army Engineers, based near Kluane Lake, Yukon Territory, Jan.-July 1952; with object: to test equipment and personnel while carrying out airfield construction program, snow compaction studies, field defenses, etc.

*Copy seen:* CaMAI; DLC.

**20269. ARCTIC CIRCULAR.** Exercise Firestep. (Arctic circular, Apr.-May, 1951. v. 4, no. 4, p. 63)

Note on this U. S. Armed Forces maneuver in Apr. 1951 "to test the mobility of airborne troops to move to the defense of Alaska."

*Copy seen:* CaMAI; DLC.

**20270. ARCTIC CIRCULAR.** Exercise Sweetbriar and Exercise Sun Dog I. (Arctic circular, Sept. 1950. v. 3, p. 32-35).

*Contains* brief notes on (1) Exercise Sun Dog I, carried out by a Canadian infantry company in the Fort Churchill area; and (2) a larger exercise of combined Canadian and United States forces on the Yukon-Alaskan boundary, both held in Feb. 1950, to test clothing, food, aircraft, vehicles, weapons, also other equipment and material. A more detailed account of the second exercise was given by O. M. Solandt, Mar. 30, 1950, to the Empire Club, Toronto, and published as "Exercise Sweetbriar" in the club's *Addresses, 1949-50*, p. 276-93 (copy in CaTU)

*Copy seen:* CaMAI; DLC.

**20271. ARCTIC CIRCULAR.** Exercises Sun Dog II and Sun Dog III. (Arctic circular, Mar. 1952. v. 3, no. 3, p. 34).

*Contains* brief note on continuation (II) of Exercise Sun Dog I (see item above), with the object of testing the effect of arctic conditions on men and equipment, and of training service staff to meet problems of airborne winter operations. Personnel from two Canadian regiments carried out this exercise in the barrens north of Churchill in Feb.-Mar. 1951. A further exercise (III) was carried out in the Labrador-Ungava area in Feb. 1952 by Canadian Army and Air Force units.

*Copy seen:* CaMAI; DLC.

**20272. ARCTIC CIRCULAR.** Films of the Eastern Arctic to be produced by the National Film Board. (Arctic circular Nov. 1950. v. 3, p. 56-57).

Plans for a Canadian party of three to spend the period July 1950-Sept. 1951 at Chesterfield and Navy Board Inlets making outlined sequences on 16 mm. Kodachrome film on six subjects: The Eskimo, Eskimo child, Natural economy of the Arctic, Arctic weather station, Birds in the Arctic, and Arctic settlement.

*Copy seen:* CaMAI; DLC.

**20273. ARCTIC CIRCULAR.** Geodetic Survey work during the summer of 1949. (Arctic circular, Feb.-Mar. 1950. v. 3, p. 18-20)

Review of localities, work groups, number of astronomical control points established, and miles covered by Canadian parties in the North, including a Geographical Bureau assignment in the Foxe Basin region.

*Copy seen:* CaMAI; DLC.

**20274. ARCTIC CIRCULAR.** The ice wagon. (Arctic circular, Feb.-Mar. 1950. v. 3, p. 22-23)

Notice of "a new R.C.A.F. North Star aircraft, specially modified for experimental studies of aircraft icing and prevention . . . known as the *Rockcliffe Ice Wagon*", and brief résumé of program, personnel and modifications of the plane. See also *Polar record*, Jan. 1952, v. 6, no. 43, p. 394.

*Copy seen:* CaMAI; DLC.

**20275. ARCTIC CIRCULAR.** Maps of the Northwest Territories. (Arctic circular, Apr.-May 1952. v. 5, no. 4, p. 44)

*Contains* a note on the maps (GB 52-04 & 05) "Settlements and trading posts" and "Transportation and communications" (scale about 1 in.:150 mi.) covering all northern Canada excepting Labrador. The maps were drawn and compiled by the Geographical Branch of the Dept. of Mines and Technical Surveys for the Northern Administration and Lands Branch of the Dept. of Resources and Development. The maps were also distributed with this number of *Arctic circular*.

*Copy seen:* CaMAI; DLC.

**20276. ARCTIC CIRCULAR.** Microfilm records of M'Clintock expeditions. (Arctic circular, Apr.-May 1951. v. 4, no. 4, p. 62)

*Contains* note that microfilms of the following ms. journals have been received at the Canadian Dept. of Resources and Development, Northern Administration and Lands Branch, Ot-

tawa: (1) Arctic Journal kept by Dr. Scott, R. N. while serving in H. M. S. *Intrepid* under Cdr. F. L. M'Clintock, R. N., 1852-4. (2) Journal kept on sledge journey by Lieut. F. L. M'Clintock, H. M. S. *Assistance*, 1850-1; (3) Arctic journals of Admiral Sir F. L. M'Clintock in (i) H. M. S. *Enterprise* 1848-9, (ii) H. M. S. *Assistance* 1850-1, (iii) H. M. S. *Intrepid* 1852-4, (iv) Yacht *Fox* 1857-9, with reports by Lieut. Hobson of journey in 1859 and findings of the Franklin Record, and by Capt. Allen Young of journey in 1859 to Prince of Wales Land.

**Copy seen:** CaMAI; DLC.

**20277. ARCTIC CIRCULAR.** Pribilof fur sealing operations, 1950. (Arctic circular, Nov. 1950. v. 3, p. 58-59)

Notice of two fires, one on the tender *Penguin* before sailing north and another which destroyed curing and barrelling buildings on St. George Island; remarks on the *Lt. Raymond Zussman*, replacement vessel which will become the permanent supply tender for the U. S. Fish and Wildlife Service to the Pribilof Islands; and on the sealskin take for 1950 which fell below average.

**Copy seen:** CaMAI; DLC.

**20278. ARCTIC CIRCULAR.** Protection of wildlife in northeast Greenland. (Arctic circular, Feb. 1951. v. 4, p. 32)

Notice from the London *Times* on a new game act effective on June 1, 1951, protecting all species of geese, Sabine gull, musk oxen, fox, polar bear, and walrus in the area between and north of Scoresby Sound, 70°28' N. 21°58' W. and Petermanns Glacier, 80°37' N. 60°50' W., i. e. most of northern and eastern Greenland.

**Copy seen:** CaMAI; DLC.

**20279. ARCTIC CIRCULAR.** Reindeer breeding experiment in Scotland. (Arctic circular, Apr.-May 1952. v. 5, no. 4, p. 45)

*Contains* a note on a limited breeding experiment proposed by the Reindeer Council of the United Kingdom, q. v.

**Copy seen:** CaMAI; DLC.

**20280. ARCTIC CIRCULAR.** Reorganization of Hudson's Bay Company posts. (Arctic circular, Nov. 1951. v. 4, no. 5, p. 74-77)

Note of (1) formation of a new Central Arctic Section comprising seven posts (not new); also (2) personnel of posts of the Ungava, Central Arctic and Western Arctic posts (29 in all), and other administrative changes.

**Copy seen:** CaMAI; DLC.

**20281. ARCTIC CIRCULAR.** Royal Naval survival experiments. (Arctic circular, Jan. 1950. v. 3, p. 11)

Note on H. M. S. *Truelove* cruise to arctic waters for tests of equipment and rations in Jan. 1950. Daily food allotment is listed.

**Copy seen:** CaMAI; DLC.

**20282. ARCTIC CIRCULAR.** The second Bishop of the Arctic. (Arctic circular, Sept. 1950. v. 3, p. 35)

Notice of consecration of Donald B. Marsh as the Church of England in Canada's Bishop of the Arctic, June 1950.

**Copy seen:** CaMAI; DLC.

**20283. ARCTIC CIRCULAR.** Spring air-lift supply of far northern weather stations. (Arctic circular, Apr.-May 1952. v. 5, no. 4, p. 45)

*Contains* note on resupply operations (food, equipment and mail) by U. S. and Canadian aircraft to the joint weather stations at Mould Bay, Isachsen, Alert and Eureka, in the Canadian Arctic.

**Copy seen:** CaMAI; DLC.

**20284. ARCTIC CIRCULAR.** Starvation near Piling, Foxe Basin, N. W. T. (Arctic circular, Sept. 1950. v. 3, p. 31-32)

Report of starvation of family of five Eskimos unable to locate their food cache on west coast of Baffin Island in Feb. 1948; death of three, rescue and recovery of two of the party; reference to two earlier similar episodes in the same region.

**Copy seen:** CaMAI; DLC.

**20285. ARCTIC CIRCULAR.** The Stefansson Library. (Arctic circular, Feb. 1952. v. 5, no. 2, p. 22)

*Contains* news note on removal of Dr. Vilhjalmur Stefansson to Hanover, N. H. and his collection of some 25,000 volumes and 20,000 pamphlets dealing with arctic, antarctic and permafrost regions, to Baker Library, Dartmouth College.

**Copy seen:** CaMAI; DLC.

**20286. ARCTIC CIRCULAR.** Tuberculosis survey: James and Hudson Bays. 1950. (Arctic circular, Mar. 1951. v. 4, p. 45-47, tables)

Report on x-ray survey of natives of the west and east coasts of James Bay and the eastern coast of Hudson Bay north to Povungnituk. In this survey, carried out by the Indian Health Services of the Dept. of National Health and Welfare of Canada, over two thousand Eskimos, 850 Indians and 205 whites were x-rayed. General health conditions (only) are men-

tioned, with figures for percentage active disease (TB). Figures are also given from the *C. D. Howe* survey at Fort Chimo and on Baffin Island.

**Copy seen:** CaMAI; DLC.

**20287. ARCTIC CIRCULAR.** Two northern murder trials. (Arctic circular, Nov. 1951. v. 4, no. 5, p. 72-73)

Report of trials of a weather station officer at Resolution Island and of an Eskimo at Eskimo Point (West Hudson Bay coast) in July 1951.

**Copy seen:** CaMAI; DLC.

**20288. ARCTIC CIRCULAR.** U. S. Navy icebreaker. (Arctic circular, Feb. 1952. v. 5, no. 2, p. 21)

Contains news note on construction of the first post-World War II U. S. Navy ice-breaker (310 ft. long 74 ft. beam, 8,300 ton displacement).

**Copy seen:** CaMAI; DLC.

**20289. ARCTIC CIRCULAR.** The voyage of the C. G. M. V. "Nauja" to Foxe Basin in 1949. (Arctic circular, Sept. 1950. v. 3, p. 27-31, map)

Brief account of an expedition (the maiden voyage of this Canadian Government motor vessel, a Peterhead boat, specially built in Canada for arctic service) under T. H. Manning for the Canadian Geographical Bureau, July 8-Oct. 5, 1949; the run northward from Moosonee to Foxe Basin, around the Basin, reconnaissance of three islands "discovered" in 1948 by Royal Canadian Air Force personnel, and the return to Churchill. Includes notes on fauna, flora, surface features, geographic location, and previous history of these islands (67°-68° N. 73°-75° W.), named Prince Charles, Air Force, and Foley Islands.

**Copy seen:** CaMAI; DLC.

**20290. ARCTIC CIRCULAR.** Wildlife work in the Northwest Territories. (Arctic circular, Nov. 1951. v. 4, no. 5, p. 71-72)

Contains brief account of the eight officers of Canadian Wildlife Service carrying out research in the Territories, their respective investigations and areas.

**Copy seen:** CaMAI; DLC.

**20291. ARCTIC CIRCULAR.** Wind-chill. (Arctic circular, Mar. 1952, v. 5, no. 3, p. 32-34, diagr., table)

Contains notes on term "wind-chill": that in low temperature, cold is more keenly felt with wind than in calm; and outline of the "wind-chill scale" origi-

nated by Dr. Paul A. Siple (*Arctic Bibliography*, No. 16133), a formula to express rate of heat loss for a given combination of wind speed and temperature; finally, remarks on the wind-chill factor, as a measure of human comfort, and indicator of rate of cooling of mechanical equipment. **Copy seen:** DLC.

**20292. ARCTIC CIRCULAR.** Yellowknife broadcasting station, CFYK. (Arctic circular, Feb.-Mar. 1950. v. 3, p. 23-24)

Notice of the opening at Yellowknife in Mackenzie District on Feb. 18, 1950, of a non-commercial station, financed by donations, staffed by townspeople, and working on a cooperative system with the Royal Canadian Corps of Signals.

Volcanic dust veils and climatic variations. (New York Academy of Sciences. Annals, 1915. v. 26, p. 149-74, 7 figs., 3 tables)

"The hypothesis attributing most climatic variations to volcanic dust veils is presented as a matter of theoretical interest. Numerous references to violent eruptions and subsequent atmospheric dust observations, particularly those affecting radiation, are given and briefly discussed. References to 1883 eruptions of Krakatoa and Aleutian volcanoes; to 1901-1904 eruptions of Mt. Colima, Mexico, Pelée, and others; and 1912, Katmai. Brief discussion and references to atmospheric circulation of hemispheres.

Pike's Peak temperature records for years 1874-1887 are given; compared to temperature records at Port Darwin, Australia, Batavia, Singapore, India, and Aden. 1900-1911, 1909-1913 temperatures also noted. Relation between sunspots and temperatures investigated. Graph shows relation between temperature and volcanic activity, 1821-1900."—*Meteorological abstracts and bibliography*, June 1950, v. 1, no. 6, p. 367.

**20301. AR'EV, T. IĀ., and others.** Otmorozheniia. (In: Opyt sovetskoi meditsiny v Velikoi Otechestvennoi Voine 1941-1945 gg. Moskva, Medgiz, 1951. t. 1, p. 191-331, illus. plates, diagrs., tables) **Other authors:** V. S. Gamov, S. S. Girgolav and D. G. Rokhlin. **Title tr.:** Frost injuries. (In: Practice of Soviet medicine during the Great Patriotic War 1941-1945).

Contains an extensive monograph on frostbite written by leading Russian authorities, with the following chapters: 1. Historical data (p. 194-95), dealing with frostbite losses in wars since Napoleon's Russian campaign. 2. Statistical data (p. 196-210) on localization, extent, degree of damage; wound and frost damage combined, freezing to death. 3. Etiology and pathogenesis of frost injury (p. 211-37), dealing with kinds of frost damage; theory of pathogenesis; disseminative necrosis; conditions creating and assisting frostbite: mechanical impediments to circulation, local and general loss of resistance, effect of the tactical position. 4. Some data on tissue changes due to frostbite (p. 238-39). 5. Diagnosis (p. 241-51), presenting general and x-ray diagnosis. 6. Classification and symptomatology of frostbite (p. 252-59), discussing four degrees of frostbite, symptoms, x-ray pictures, etc. 7. Complications (p. 260-80), deal-

ing with local complications of soft tissues, joints and bones; general complications; late complications and sequelae. 8. Therapy (p. 281-321), including first aid; conservative therapy; surgical therapy; post-operative treatment; therapy according to the degree of frostbite. 9. Prophylaxis (p. 322-23), collective and general. 10. Results and conclusions (p. 326-31), stressing the value of instructing the soldier about frostbite and its prophylaxis; the importance of proper clothing and shoe gear; the great success of therapy by quick re-warming, and the preference for early necrotomy and necrectomy.

**Copy seen:** DLC.

**20302. AR'EV, T. IĀ.** Profilaktika otomrozheniĭ. (Voenno-meditsinskii zhurnal, Dec. 1946, no. 12, p. 3-8) **Title tr.:** The prophylaxis of frostbite.

Contains a review article based on the experience of World Wars I and II, and dealing with the causes of frost injury: low temperature, moisture, mechanical slowing of circulation (e. g. through tight clothing, footwear), general and local decrease of resistance. This is followed by a discussion and presentation of preventive measures of three kinds: (1) group prophylaxis (organization of hygienic field covers and quarters; proper food supply, etc.); (2) proper and hygienic clothing and footwear; (3) personal hygiene. The problem of foot-wear and -care is discussed in detail.

Moskva—Leningrad, Gosudarstvennoe izd-vo geologicheskoi literatury ministerstva geologii SSSR, 1947-1948. v. 1: 414 p., illus., maps (22 fold.); v. 2: 372 p., diagrs., maps (2 fold.). **Title tr.:** Geological structure and geological history of the U.S.S.R. in two volumes, fourth edition. Vol. 1: Geological formation of the U.S.S.R. and its relation to the surface structure of the rest of the world. Vol. 2: The pre-Cambrian and Paleozoic.

**Contents:** v. 1, pt. 1. The territory of the U.S.S.R. and Eurasia as a whole. (1) areas of pre-Cambrian and Paleozoic foldings; (2) main lines of structure of the upper Paleozoic folds; (3) main outlines of the structure of Mesozoic foldings; (4) main lines of structure of Tertiary foldings. Pt. 2. Africa, Australia, America, Antarctic and the oceans. (1) Africa; (2) Indian Ocean; (3) Australia, Melanesia and Micronesia; (4) North America; (5) Central America; (6) South America and the Antarctic continent; (7) Pacific ocean; (8) Atlantic and Arctic oceans. Part 3. Some general conclusions. The

following arctic areas are dealt with: Lena-Yenisey area (p. 124-27); Kanin, Spitsbergen, Rybachiy Peninsula and Bear Island (p. 137-40); Taymyr, Severnaya Zemlya and Yenisey area (p. 205-210); Upper Kolyma and Chukhotsk areas (p. 241-46); Kamchatka (p. 276-79); Arctic Ocean (p. 353).

Vol. 2. (1) Pre-Cambrian group; (2) the Cambrian system; (3) the Silurian system; (4) the Devonian system; (5) the Carboniferous; (6) The Permian. The following arctic areas are discussed in nearly all chapters: Kanin, Taymyr, Severnaya Zemlya, Yenisey area, Kola. Bibliography 580, 986 items).

**20310. ARMSTRONG, TERENCE E.** The Northern Sea Route; Soviet exploitation of the North East Passage. Cambridge, University Press, 1952. xiii, 162 p., 6 plates, 9 maps incl. 1 fold. (Scott Polar Research Institute. Special pub. no. 1)

Exhaustive study, based largely on Russian sources, providing an historical survey of the Route prior to 1933 (p. 1-36); data on its physical characteristics, traffic, administration, equipment and scientific investigation 1933-49 (p. 37-103); analysis of its economic and strategic usefulness, and appraisal of results achieved by its development (p. 103-119). *Appendices* (9) present data on traffic and freight turnover, lend-lease shipping 1942-45, Soviet ice-navigating vessels, polar stations, coal analyses, and text of the decree of Jan. 25, 1941 on Glavsevmorput'. An extensive bibliography of about 400 publications is included. The Northern Sea Route is treated in its entirety from Murmansk to Vladivostok, as well as in its parts: the Kara Route, the Pacific-Kolyma and Lena, and the Yenisey-Lena sectors. River shipping, arctic sources of ships' fuel, types of vessels and ports along the Route are discussed in considerable detail. Scientific and other institutions and individuals contributing to the Route's development are signalized. Author concludes the Route is not yet justified economically but has benefited the U.S.S.R. strategically, also in socialization of the native population, for communistic propaganda, and in science. Future scientific and technical developments may increase its economic importance, on the other hand climatic deterioration, reversing the recent favorable trend, may jeopardize the very existence of the Route. Reviewed by J. C. Webster in *Arctic*, Dec. 1952, v. 5, no. 4, p. 241-49.

**20311. ARMSTRONG, TERENCE E.** Place-names in the Soviet Arctic. (Polar record, Jan. 1950. v. 5, no. 39, p. 408-426) *Contains* remarks on non-Russians' confusion resulting from use of variant names (often simply translations) for

places in the Soviet Arctic. General use of local official, i. e. Russian, names is recommended, particularly as most features in the Soviet Arctic bear Russian names, and those (few) of foreign origin have been russianized. Russian place names are analyzed as to origin and structure. The principal British and American map- and chart-making agencies are noted and their policies discussed as to (1) system of transliteration, treatment of (2) Russian place names of Western European origin, (3) generic parts and "map information", (4) English names, and (5) variant Russian forms. Then follows author's recommendations on these five problems; also a glossary of some 150 generic terms and general words from Soviet Arctic maps given in transliteration and Cyrillic alphabet with meaning in English. This paper is discussed in J. F. Gellert *Die geographischen Namen in der Sowjetarktis*, 1951, q. v.

**20322. ARNOLD, CHESTER A.** Paleobotanical investigations in Naval Petroleum Reserve no. 4, Alaska. (Science, July 18, 1952. v. 116, no. 3003, p. 61-62)

Contains an account of a collecting trip made by a three-man party from the University of Michigan during the summer of 1951, mostly along the Colville River (69° N., 154° W.) bordering the southern edge of the Reserve. Fossil remnants were collected of plants representing conifers, cycadophytes, ginkgoes, ferns, but few dicotyledons. The study was made in order to determine the age of the rock formations of the area, specifically whether they belong to the Upper or Lower Cretaceous. Copy seen: DLC.

Metsätieteellinen tutkimuslaitos. Julkaisuja, 20:4) Title tr.: Studies on the relationship between breast-height and cutting-height diameter on useable timber and the amount of felling.

Contains data on the residual timber from pine and spruce of northern, in comparison with that of southern, Finland. Bibliography (100 items). Summary in German, p. 161-88. Copy seen: DLC.

**20324. ARONSON, JOSEPH DAVIS, 1889-** The history of disease among

the natives of Alaska (Alaska health, 1947. v. 5, no. 3, p. 1-2; no. 4, p. 3-4; no. 5, p. 5-6; no. 6, p. 4-5; no. 7, p. 3-4)

Reports and records of early explorers lead to the conclusion that diseases due to food deficiency existed among Alaskan natives prior to the coming of the white man, but smallpox, tuberculosis and syphilis were most probably introduced by him. The Russian missions kept records of death among natives and the author, aided by such records, concludes that smallpox caused more havoc than all of the other diseases; tuberculosis while not epidemic, took a great toll of human life and syphilis became widespread.

**20333. ASCHOFF, JÜRGEN.** Der Anstieg der Rectaltemperatur bei umschriebener Abkühlung der Körperoberfläche. (Pflügers Archiv für die gesamte Physiologie, 1944. Bd. 248, p. 149-57) **Title tr.:** The rise in the rectal temperature due to local cooling of the body surface.

Contains a study of heat loss through the hands in air and water of 13° C., and its effect on the total heat loss of the body. Under the above conditions an actual decrease of total heat loss by 120 cal./min. was observed. This fact is explained by the vasoconstriction taking place in the hand which reduces heat loss. The saved heat is sufficient to raise the rectal temperature. All this holds true only if the cold stimulus affects a not too extensive area which normally partic-

pates strongly in the total heat loss (*lit.*: release). Bibliography (13 items).

**Copy seen:** DLC.

**20334. ASCHOFF, JÜRGEN.** Einige allgemeine Gesetzmässigkeiten physikalischer Temperaturregulation. (Pflügers Archiv für die gesamte Physiologie, 1947. Bd. 249, p. 125-36, 4 fig.) **Title tr.:** Some general regularities of physical temperature regulation.

*Contains* an introductory, fundamental study made at the Physiological Institute of the University of Göttingen, resulting in the establishment of: a reliable method for measuring heat loss; the effect of food and diurnal period on "heat passage"; a 24-hour rhythm in physical temperature regulation and the effect of sleep on the latter. Bibliography (about 25 items).

**Copy seen:** DLC.

**20335. ASCHOFF, JÜRGEN.** Grundversuche zur Temperaturregulation. Über vergleichende Messwerte zur Beurteilung der Wärmeabgabe an Wasser. (Pflügers Archiv für die gesamte Physiologie, 1944. Bd. 247, p. 469-79, 5 fig.) **Title tr.:** Basic experiments in temperature regulation. Comparative values in the estimation of heat loss in water.

*Contains* a study centered primarily on whether it is possible to reduce heat loss in the hand, by changing the heat conductivity of its surface and the upper layers of the skin. A method is described which produces fundamental data on heat loss to water, data which enables one numerically to compare various conditions of heat passage. Bibliography (7 items).

**Copy seen:** DLC.

**20336. ASCHOFF, JÜRGEN.** Grundversuche zur Temperaturregulation. Vergleich unterschiedlicher Wärmedurchgangsbedingungen am Modellkörper und an der Hand. (Pflügers Archiv für die gesamte Physiologie, 1944. Bd. 247, p. 480-96, 8 fig.) **Title tr.:** Basic experiments in temperature regulation. Comparison of various conditions of heat passage in a dummy and in the hand.

*Contains* a study of heat loss in dummies made of glass; in hands with full and cut-off circulation and of the differences in heat loss between the left and right hand. The effect of coating hands and dummies with vaseline, etc., is also studied. Bibliography (about 25 items).

**Copy seen:** DLC.

**20337. ASCHOFF, JÜRGEN.** Kreislauf-regulatorische Wirkungen der Kälte-dilatation einer Extremität als Folge extremer, umschriebener Abkühlung. (Pflügers Archiv für die gesamte Physiologie, 1944. Bd. 248, p. 436-42, 3 fig.) **Title tr.:** Regulation of circulation by cold-dilatation of an extremity, as a result of localized deep-cooling.

*Contains* a study on the effect cooling a circumscribed area of the hand to below 8° C., has on the circulation of the arm, and indirectly on the total blood circulation. The mechanism of this indirect long-distance effect is discussed and similar phenomena caused by application compression cuffs brought forward. Bibliography (8 items).

**Copy seen:** DLC.

**ASCHOFF, JÜRGEN.**

Mitteilungen zur physikalischen Temperaturregulation 1-3, *see* his:

- (2) Zur Regulationsbreite...
- (3) Die obere Extremität....

**20338. ASCHOFF, JÜRGEN.** Die obere Extremität im Dienst der physikalischen Temperaturregulation. (Pflügers Archiv für die gesamte Physiologie, 1947. Bd. 249, p. 148-66, 7 fig.) **Title tr.:** The upper extremity in the service of physical temperature regulation.

*Contains* a detailed study of conditions in various parts of the upper extremity of man with regard to their role in temperature regulation. The underlying blood circulatory mechanism seated in the arterio-venous anastomoses is discussed, and its efficiency in various areas touched upon. Bibliography (about 50 items).

**Copy seen:** DLC.

**20339. ASCHOFF, JÜRGEN, and F. KAEMPFFER.** Über den Wärmedurchgang durch die Haut und seine Änderung bei Vasokonstriktion. (Pflügers Archiv für die gesamte Physiologie, 1947. Bd. 249, p. 112-24, diags., tables) **Title tr.:** On heat passage through the skin and its alteration during vasoconstriction.

*Contains* a report on calorimetric measurements of cooling of the hand in water of 12.5° C. The difference between its behavior and that of a model (dummy) under same circumstances, is traced to vasoconstrictory processes; the latter reduce progressively the heat passage, ten minutes after the cold stimulus has been applied. This observation enables

an agreement between theoretical and observed data and between intact and isolated tissues. Bibliography (6 items).

**Copy seen:** DLC.

**20340. ASCHOFF, JÜRGEN.** Über die Interferenz temperaturregulatorischer und kreislaufregulatorischer Vorgänge in den Extremitäten des Menschen. (Pflügers Archiv für die gesamte Physiologie, 1944. Bd. 248, p. 197-207, 7 fig.) **Title tr.:** On the interference of temperature-regulatory and circulation-regulatory processes in the extremities of man.

*Contains* a study of the phenomenon consisting in a rise of temperature in various areas of the body surface, when a consistent cold stimulus affects the hand. The cause of it was found to be the reduction of heat-loss in the cooled hand effected by vasoconstriction and accompanied by a rise of blood pressure. The same effect can be brought about by cutting of the circulation in one or more extremities with a pneumatic cuff. These phenomena show the role circulation plays in temperature regulation of the body. Bibliography (14 items).

**Copy seen:** DLC.

**20341. ASCHOFF, JÜRGEN.** Über die Kälte-dilatation der Extremität des Menschen in Eiswasser. (Pflügers Archiv für die gesamte Physiologie, 1944. Bd. 248, p. 183-96, 7 fig.) **Title tr.:** On the dilatation by cold of the human extremity in ice water.

*Contains* a detailed study of the circulation of the hand when held in ice water and when taken out of it. The strong vasodilatations taking place at 30 min. intervals at temperatures below 8-10° C. correspond, in their origin at the fingertips, to the vasodilatations during heating of the body. The special significance of the arterio-venous anastomoses in the process is discussed, as well as the special position of the extremities in the framework of physical temperature regulation. Bibliography (25 items).

**Copy seen:** DLC.

**20342. ASCHOFF, JÜRGEN.** Die Vasodilatation einer Extremität bei örtlicher Kälteeinwirkung. (Pflügers Archiv für die gesamte Physiologie, 1944. Bd. 248, p. 178-82) **Title tr.:** The vasodilatation of an extremity on local cold effect.

*Contains* a report on experiments by immersing the hands in cold water. At 10-13° C. of the water a local vaso-

constriction was observed, lasting through the period of the cold stimulus, and resulting in a maximal reduction of heat loss. Below 8-10° C. of the water vasoconstriction is followed by strong dilatations taking place at 30 min. intervals, which almost doubles the heat loss. This represents a regular reaction of considerable importance to the best economy and to the regulation of peripheral circulation. Bibliography (10 items).

*Contains brief descriptive data on repair and upkeep of various kinds of bridges in an area which extends into the far North.*

**Copy seen:** DLC.

**20392. BADER, HENRI, 1907- , and others.** Preliminary investigations of some physical properties of snow: final report. Minneapolis, Minn., June 1951. 62 p. incl. illus., tables, graphs, diagraphs. (SIPRE Report no. 7, Minnesota University, Engineering Experiment Station. Contract nos. DA-21-081-ENG-200 and DA-21-018-ENG-

201) *Other authors:* B. Lyle Hansen, Jerome A. Davis, and Marvin A. Sandgren.

"The triaxial behavior of snow is discussed on the basis of an analysis of the velocities of deformation and stresses. Special cases are presented and the shear strength-normal stress diagram is calculated from triaxial data. High speed compactor data are interpreted as a function of height and time. An equation for the determination of tensile strength of snow by a centripetal force apparatus is given. Calorimeter theory and X-ray density scanning of snow are discussed. Preliminary experimental results of the determination of the cross-section number, specific velocities of uniaxial compression, tensile and shear strength, and use of cone and disk penetrometers are presented. A description of instruments used, with specifications and part numbers, is given. Included are hydraulic press, triaxial apparatus, disaggregator, penetrometer, and high speed compactor. Assembly drawings and wiring diagrams are appended."—SIPRE.

**20393. BADER, HENRI, 1907-** . The significance of air bubbles in glacier ice. (*Journal of glaciology*, Oct. 1950. v. 1, p. 443-51, diags.)

On the basis of research with Project Snow Cornice in 1949, at a camp on the old, coarse-grained ice near the foot of Malaspina Glacier, Alaska (about 59°43' N. 140°25' W.), description is given of shapes of cavities containing water and air bubbles, which were "found to reflect the anisotropism of ice crystals and reveal that the main crystallographic axis is polar." Such a study "can give valuable information on the evolution of the ice."

"Analyses of the air pressure in the bubble and of the volumetric relation of the air and the water in the bubble indicate the possibility of determining the maximum depth from which the ice has emerged. The air bubbles examined were in the range of 0.1 to 1.0 mm. diameter. Water bags containing the air bubbles are never spherical. They were predominantly rotational bodies showing the anisotropic nature of the ice crystals. It is suggested that air bubbles remain indefinitely in the glacier ice unless they are eliminated from the névé."—SIPRE.

ogy. Review properties snow & ice. 1951. No. 24376.

**20394. BADER, MORTIMER E., and J. MEAD.** Individual differences in vascular responses and their relationship to cold tolerance. (*Journal of applied physiology*, May 1950. v. 2, p. 608-618, diags.)

Work of the U. S. Dept. of the Army, Quartermaster Climatic Research Laboratory and the Medical Dept. U. S. Army, carried out "with the technical assistance of M. E. Pillion" at Fort Churchill, Manitoba, 1948-49, on 24 men. "Correlation between digital vascular response and cold tolerance was demonstrated" . . . but "cannot be regarded as a specific indication of [a man's] performance under cold stress. None of the remaining physiological indices in which consistent variation among individuals was demonstrated showed any marked relationship with cold tolerance. Men studied before and after a field bivouac under cold stress experienced less pain and had smaller blood pressure rises during immersion of the feet in ice water after bivouac."

**20395. BADER, RICHARD ARTHUR, 1922-** , and others. Hormonal alterations in men exposed to heat and cold stress. (*American journal of physiology*, Dec. 1948. v. 155, p. 425) *Other authors:* H. J. Stein, J. W. Eliot, and D. E. Bass.

Contains a brief report of a study of three men subjected to intermittent exposures to heat and cold (-20° F.). The number of circulating eosinophils was reduced by a combination of cold and exercise. Heat and cold stresses apparently did not deplete the adrenal cortical reserve as measured by ACTH. No significant changes were found during any of the stress periods in urinary uric acid-creatinine ratio, urinary 17-ketosteroid excretion, absolute lymphocyte counts, and basal metabolism.

posed to warm (80°-85° F.) and cool (60° F.) ambient temperatures, with their urine collected at regular intervals. The effects of erect posture, exercise, and an extract of pitressin on urine flow, were also studied. Measurements of kidney function, and rate of chloride excretion were made during the alternate exposures. The results indicate that cold diuresis is accomplished by diminished reabsorption of water in the kidney tubulus, and that this may be the result of a reduced secretion of the anti-diuretic hormone of the posterior lobe of the pituitary. Other aspects and similarities with water diuresis are also discussed. Bibliography (30 items). **Copy seen:** DSG.

**20397. BADER, RICHARD ARTHUR, 1922-**, and others. Hormonal and renal mechanisms of cold diuresis. (Journal of applied physiology, 1952. v. 4, no. 8, p. 649-58, 6 fig.) Other authors: Johan W. Eliot, and David E. Bass.

Contains a study on nine nude, recumbent males, exposed to an environmental temperature of 60°F. A fall in urine specific gravity, an increase in urinary chloride excretion, diminution of renal tubular reabsorption of water, inhibition by erect posture, exercise, and by extremely small doses of pitressin, were observed. The similarity with water diuresis and the possible function of the pituitary are discussed. Bibliography (28 items). **Copy seen:** DLC.

**20398. BADER, RICHARD ARTHUR, 1922-**, and others. Renal and hormonal mechanisms of cold diuresis. (Federation proceedings, Mar. 1949. v. 8, p. 7) Other authors: J. W. Eliot and D. E. Bass.

Contains an abstract of a study with unclothed men exposed to air temperature of 15° C., and compared with such covered by blankets and kept at 24°-27° C. Degree of cold diuresis, specific gravity, chloride concentrate and volume of urine, chloride and water reabsorption, the effects of pitressin, etc., were studied. **Copy seen:** DLC.

Contains a popular account of auroras, their distribution; connection with earth magnetism and solar activity, specifically the solar emission of hydrogen and calcium ions, and the assumed way of light effects.

**Copy seen:** DLC.

**20404. BAGARIĀTSKIĬ, B. A., and M. I. MORDUKHOVICH.** Spektry polĭarnykh siĭaniĭ v infrakrasnoi oblasti. (Akademiĭa nauk SSSR. Doklady, 1952. t. 82, no. 1, p. 45-47, diagr.) **Title tr:** Spectra of auroras in the infrared range.

Contains an analysis of several spectra of auroras within the infrared range. The photograms and observations were made "in the North" during March 1951. Bibliography (7 items).

**Copy seen:** DLC.

**20405. BAGARIĀTSKIĬ, V. I., and others.** K voprosu ob infrakrasnom izluchenii nochnogo neba i polĭarnykh siĭaniĭ. (Akademiĭa nauk SSSR. Doklady, 1952. t. 82, no. 4, p. 579-80, table) **Other authors:** V. I. Krasovskii and M. I. Mordukhovich. **Title tr:** On the problem of infrared radiation of the night sky and auroras.

"During March, 1951, four spectra were obtained of the aurora in the 8000-11,000 Å (near infrared bands) and one of the night sky light in the absence of an aurora. Results of line intensity

measurements of the spectrophotographs are tabulated (for 7800, 8400, 8700, 9200 and 10,100 Å). It was noted that, although little regional or time variation was found, there was a marked diminution of intensity in the infrared of the night sky during auroral displays. Later (mid-August, 1950) it was found there was an almost total absence of night sky radiation (8-1.1 μ) at Simeiz (Crimea) during a period of extreme auroral activity (Aug. 18-20), 195 auroras observed all over the Northern Hemisphere)."—*Meteorological abstracts and bibliography*, Oct. 1952. v. 3, no. 10, p. 1038.

**20414. BAIRD, PATRICK D.** Canadian expedition to Baffin Island, 1950. (Polar record, Jan. 1952. v. 6, no. 43, p. 372-75, illus., map)

Contains a brief report on the expedition May-Aug. 1950, composed of eight Canadian, three British, three Swiss, four American, one Norwegian and one Finnish member, led by P. D. Baird, glaciologist, and sponsored by the Arctic Institute of North America, Canadian institutions and the Swiss Foundation for Alpine Research. The expedition centered at Clyde (ca.  $70^{\circ}25'$  N.,  $68^{\circ}40'$  W.) and established glaciological, biological and mountaineer camps, interconnected by radio. Investigations included: glaciology of the Barnes Ice Cap (located at the center of the island); weather observations; biological survey of Clyde Inlet and surroundings; plant collecting; breeding of passerine birds; collecting of small mammals, birds, insects, and fresh-water organisms; mountaineering.

**Copy seen:** DLC.

**20415. BAIRD, PATRICK D.** The glaciological studies of the Baffin Island Expedition, 1950, part I. Method of nourishment of the Barnes Ice Cap. (Journal of glaciology, Mar. 1952. v. 2, no. 11, p. 2-9, illus., sketch maps)

Contains paper read at a meeting of the International Commission on Snow and

Ice, Brussels, 1951: an account of the methods and results of measurements made on accumulation and ablation of the Barnes Ice Cap  $69^{\circ}35'-70^{\circ}30' \text{ N. } 71^{\circ}50'-74^{\circ}30' \text{ W.}$  on Baffin Island in the summer of 1950; results indicate a balanced budget, without the occurrence of firn. "It is postulated that its nourishment is by superimposed ice due to immediate refreezing of much of the melt water of summer. It is further inferred that a similar process nourishes many arctic glaciers and ice caps where elevation, precipitation and temperature are all low. The name 'Baffin type' is proposed for these in the classification of glaciers."—Author's abstract. **Copy seen:** DLC.

**20416. BAIRD, PATRICK D., and D. J. SALT.** Report on expedition Snow Cornice. (National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum, no. 14. (Canadian papers presented at the Oslo meetings of the International Union of Geodesy and Geophysics, Aug. 1948, *pub.* Ottawa 1949) p. 1-13, incl. graphs, diagr.)

"The organization of the expedition is briefly outlined. General studies on the accumulation area of the Seward Glacier (approx.  $60^{\circ}16' \text{ N. } 140^{\circ}18' \text{ W.}$ ) included thermal borings to a depth of 204 ft. and firn density and meltwater observations to depths below 50 ft. Glacier thickness was measured by seismic, acoustical and radar soundings. No results were obtained after two weeks' work in the glacier outlet, due to the inadequacy of the equipment in penetrating the deep firn. Experiments were continued at the airstrip camp and dynamite charges released in the adjacent crevasses. Results obtained are discussed and time-distance curves presented. Ice and snow depth at the airstrip camp was  $1600 \pm 100 \text{ ft.}$  Recommendations for future work on ice fields are presented."—SIPRE.

**20431. BALK, NORMAN, 1894-** Die Medizin der Lappen. Greifswald, Universitätsverlag Ratsbuchhandlung L. Bamberg, 1934. 64 p., map. (Deutsch-nordische Gesellschaft für Geschichte der Medizin, der Zahnheilkunde und der Naturwissenschaften, 11) *Title tr.:* Lappish medicine.

This study differs from Qvigstad's basic work (see *Arctic Bibliography*, No. 14041) in the interpretation and arrangement of the data, Balk finding aboriginal Mongol characteristics only in the oldest magic-cure methods, Qvigstad assuming a foreign origin for Lappish medicine as a whole. Balk treats the subject from viewpoint of the remedies and cure methods, rather than from that of the ailments and diseases. He deals with plant remedies, use of metals and animals in therapy and its magic aspects, manual or surgical treatment (to extract source of the ailment from the body), blood-letting, moxibustion (cauterization by means of moxa); Lappish theory of disease as sent by an enemy in the earth, water or air; necessity of using exorcism especially for diseases

originating in the earth (the dead); Lappish belief that each disease has a "spirit," its appearance in hallucinations. Author concludes that the older type of cures has northern Siberian associations, the more recent Finnish and German. Bibliography.

**20440. BANFIELD, ALEXANDER WILLIAM FRANCIS, 1918-** . The barren-ground caribou. Ottawa, Dept. of Re-

sources and Development, 1951. vi, 52 p. 32 illus. incl. 8 maps, diagrs. Mimeographed.

*Contains* final report (for preliminary report, see *Arctic Bibliography*, No. 1024) on an investigation into the status and utilization of the barren-ground caribou between Hudson Bay and the Mackenzie River, recommended by the Eleventh Conference of Provincial and Dominion Wildlife officials (1947) and undertaken by the Canadian Wildlife Service. The animal plays an important role in the economy of 20,000 people, Eskimos, Indians and whites, by supplying them with meat, hides for clothing, etc., and fears that the species may be depleted, motivated the present investigation. This includes: environment, distribution, range and present status of the animal; migrations and human influence on them; description of the animal (body form, weight, pelage, antlers, etc.); food requirements; individual and group behavior of the animal; vital statistics, growth, pathology, accidents; ecological relations; wolf predation; human utilization; human population in caribou range; native game returns. The study led to the conclusion that the number of animals shrank from an estimated 1,750,000 in 1900 to 670,000 at the time of this study. Control of the number of animals killed, is therefore recommended. This report is summarized in *Polar record*, July, 1952, v. 6, no. 44, p. 532-34.

**20442. BANFIELD, ALEXANDER WILLIAM FRANCIS, 1918-** . Notes on the mammals of the Mackenzie District, Northwest Territories. (*Arctic*, Sept. 1951. v. 4, p. 113-21, illus., map)

*Contains* result of observations on distribution of mammals made in the course of other field investigations during 1946-49, for the Canadian Wildlife Service, by trapping, canoe trips and low-level flights. "Mackenzie district consists of two major biotic formations in which mammals

occur: the tundra and the taiga or boreal forest biomes. These observations deal with the fauna of both formations." 18 species are dealt with, their occurrence (observed or implied) is discussed together with their color, habitat, migration, abundance, etc. Bibliography (9 items).

**Copy seen:** DLC.

**20443. BANFIELD, ALEXANDER WILLIAM FRANCIS, 1918-** . Second report on the Barren-ground Caribou Investigation. (Arctic circular, Apr.-May 1952, v. 5, no. 4, p. 43-44)

*Contains* note on the final phase of this investigation initiated in 1947: the work of two parties in the summer of 1949. One party studied the caribou west of Hudson Bay near Beverly and Nuelin Lakes and at Churchill; the other studied vegetation on the winter range near Fort Reliance and the Lockhart River, the caribou breeding-grounds near Bathurst Inlet, and caribou concentrations near Arctic Sound and Perry River in Mackenzie District. Data were collected on Eskimo hunting techniques and utilization of caribou during summer migration. The final report of investigation (see above) is summarized in regard to vital statistics of the caribou. A permanent caribou mammalogist, John P. Kelsall of Canadian Wildlife Service has been appointed to continue the investigation with headquarters at Yellowknife.

**20445. BANK, THEODORE P., II.** Botanical and ethnobotanical studies in the Aleutian Islands I. Aleutian vegetation and Aleut culture. (Michigan Academy of Science, Arts and Letters. Papers, 1951. v. 37, p. 13-30, illus., table, plates)

*Contains* sections on topography and climate of the Aleutian arc; characteristics of the five habitats and their plant-composition, viz: shoreline vegetation; lower grass-meadow vegetation; rock cliff habitat; wind slopes vegetation, and special habitats. The last section deals briefly with plants used for making fishlines, for food, weaving, poisons, etc. Bibliography (9 items). This paper is a result of the author's phyto-ecological observations during 1948-50 for University of Michigan studies. Another paper to be published elsewhere will present descriptions of the sites investigated.

**Copy seen:** CaMAI; DLC.

**20446. BANK, THEODORE P., II.** Experiences of scientific exploration in the Aleutian Islands. (Asa Gray bulletin, Jan. 1952. N. S., v. 1, p. 77-86, illus., map)

*Contains* an introductory sketch of earlier explorations of the Aleutians; their geography, fauna and flora; the University of Michigan Expeditions to the Aleutians begun in 1948 under the general direction of H. H. Bartlett, consisting of small summer field parties, making archeological explorations and plant collections with the aim of establishing a post-glacial chronology for the Aleutians generally in relation to vegetational and faunal succession as well as human occupation. Informal notes are given on parties' work: exploring in ancient burial caves at Kagamil (Islands of the Four Mountains), plant collecting on Great Sitkin, 40 miles east of Adak, etc.

**Copy seen:** CaMAI; DSI-M.

**20447. BANK, THEODORE P., II.** A preliminary account of the University of Michigan Aleutian Expeditions, 1950-51. (Asa Gray bulletin. July 1952. New ser. v. 1, no. 3, p. 211-18, illus. diag. table)

*Contains* note of the 1948 and 1949 field work (which was primarily concerned with botanical and anthropological surveys), followed by details of the 1950 expedition of a party of six, (with author as director for 1950 and 1951): its itinerary, botanical and archeological work; the 1951 expedition (seven members): its itinerary; archeological and ethnobotanical work. The botanical work of both years concerned the study of bryophytes, their habitats and ecology; also soil samples were collected from excavations, road cuts and other exposures, for pollen, spore, seed and microfauna ex-

aminations and for correlations of radiocarbon dating in the area. Archeological activity consisted in reconnaissance of old village sites and burial caves, and collecting ethnobotanical material for radio-carbon dating whilst excavations at Amaknak Island (Dutch Harbor) occupied the 1951 season. In ethnology, files of the Alaska Native Service and the Territorial Health Dept. were studied for economic and medical data and trends among the Aleuts; the use of plants for food, poison and healing was also investigated; ornithological and invertebrate studies were carried out incidentally to other duties.

**20457. BARBEAU, CHARLES MARIUS, 1883-** . Songs of the Northwest. (Musical quarterly, Jan. 1933. v. 19, no. 1, p. 101-111, plate)

Contains descriptive notes on several songs recorded by the author during travels among Indians of the Southeast Alaska - Yukon - British Columbia border region. Words and airs are transcribed here. Author stresses the social function of these songs, and suggests an Asiatic background to both singers and the songs.

**Copy seen:** DLC.

**20458. BARBEAU, CHARLES MARIUS, 1883-** . Totem poles . . . according to crests and topics. Ottawa [1950]. 2 v. xii, 880 p., col. front., 561 illus., maps on end papers. (Canada. National Museum. Bulletin, no. 119, v. 1-2)

Contains introductory discussion (p. 1-14) of the development of plastic art

among Indians of the Northwest coast in the 19th century by use of tools of European origin: the totem pole coming "into fashion through the rise of ambitions fostered mostly by the fur trade," the carved figures on the cedar poles being family crests, and representing historical events, legends, natural phenomena and animals of the country. "The legendary origin of most of these emblems is explained in traditional narratives . . . recited at the winter festivals or potlatches after totem poles had been erected." Author remarks on features of the northwest coastal tribes' social life, practical problems of raising totem poles, aesthetic character of the carvings, their themes' affinities with mythology of Asiatic peoples.

This work covers all the totem poles, house posts and frontals of British Columbia and Alaska (excepting those treated in the author's *Totem Poles of the Gitskan, Upper Skeena River, British Columbia*, 1929). In v. 1, 186 are shown in photographic illustrations accompanied by descriptions, measurements, location *in situ* and in museums. The material is arranged systematically according to crests (23) and topics, and the legends (a few hundred) symbolized by the carved figures, are narrated as they are known to (mainly) Tsimshian, Haida, and Tlingit tribes.

In v. 2 the material is arranged regionally: totem poles, etc. of the Tsimshians', Haidas', Tlingits' (p. 435-649) and other (more southerly) groups are presented with photographic illus., descriptions, historical and folkloristic notes. In a final chapter, the growth of totemism on the North Pacific coast in the past 175 years, is summarized, with stress on its bases in the white man's economy and the indigenous social organization; its manifestations of a Siberian social pattern persisting among northwest coastal peoples are noted. Systematic and chronological analyses are made by Dr. Barbeau of the principal literature, and a comprehensive bibliography (121 items) compiled by James H. Johnstone and Marcel Rioux. A summary of totem pole conservation and restoration is included.

**Copy seen:** DGS; DSI-M.

**20459. BARBIER, DANIEL, 1907-**, and **D. R. WILLIAMS**. Observations of the aurora borealis. (Journal of geophysical research, Dec. 1950. v. 55, p. 401-414, illus., diags.)

"From spectrograms obtained near Fairbanks, Alaska [Jan.-Feb. 1949], identifications of lines and bands in the spectral range from 3100Å to 5000Å are proposed. The presence of the heretofore debatable lines, NI 3467 and OI 4368, is confirmed. The observed intensity distribution in the Vegard-Kaplan system in the aurora is entirely different from that in the night sky. Several weak spectrograms in the region 6300 Å to 6900 Å are discussed. Visual observations of auroral phenomena are set forth and include a detailed description of a blue, sunlit aurora." —Authors' abstract. More detailed abstract is given in *Meteorological abstracts and bibliography*, May 1951. v. 2, no. 5, p. 372.

**Copy seen:** DGS.

**20460. BARBIER, DANIEL, 1907-**, and **H. PETTIT**. Photometric observations of the airglow and of the aurora borealis at College, Alaska. (*Annales de géophysique*, Apr./June 1952. t. 8, no. 2, p. 232-47)

Contains an account of studies made during Feb. 21-25, 1949 by an expedition organized by the Aerophysics Branch, U. S. Naval Ordnance Test Station, to the Geophysics Observatory of the University of Alaska, 64°53' N. 147°51' W. The Roach photometer was used with due corrections for scattered light. In airglow, the intensity of the green line was found to be about the same as in moderate latitudes; the D line and  $\lambda$  5210 were much weaker; as to the auroral, most observations of the green line indicated a height of 135 km. but a few gave 750 km.; the other two radiations seemed to be emitted at high altitude: some indications of the macroscopic structure of the aurorae are also included. Bibliography (12 items).

**Copy seen:** DGS.

**20461. BARBOUR, HENRY G., and others**. An approach to the use of drugs in hypothermia. (*Yale Journal of biology and medicine*, Jan. 1944. v. 16, p. 231-38) Other authors: E. A. McKay and W. P. Griffith.

Contains a report on experiments with a series of drugs, aimed at promoting recovery after hypothermia. Beta-tetrahydronaphthylamine, among the drugs used, best facilitated recovery in rats; it hastened resumption of righting reflexes and the disappearance of edema. Ephedrine reduced edema earlier in the rewarming period than beta-tetra, but

was inferior in other respects. Bibliography (4 items). **Copy seen:** DLC.

**20462. BARBOUR, HENRY G.** Reflex intracellular water increase in cold environments. (American journal of physiology, May 1940. v. 129, no. 2, p. P304-305)

*Contains* a brief report on experiments with cats, kept for 30 minutes at 25°, 35° and 45° F. In the experimental animals water was found to be 51-66 percent intracellular as against 41-56 percent in controls. Attraction into the interior of the cell is hence considered to be the main factor in the reflex shift of water, in response to cold environment.

**Copy seen:** DLC.

**20463. BARBOUR, HENRY G., and others.** Water shifts in deep hypothermia. (American journal of physiology, Oct. 1943. v. 140, no. 1, p. 9-19, 6 fig.) *Other authors:* E. A. McKay and W. P. Griffith.

*Contains* a study on monkeys and rats kept within a few degrees of 0° C. Includes account of previous studies and findings; procedure, total metabolism, blood changes, etc. Exposure to cold with retention of protective reflexes was found to lead to a gain in intracellular water. If, however, the central nervous system becomes so chilled as to cause general neuro-muscular depression, the effect on the hypothalamus is to abolish the reflex responses to cold, which includes a reversal in water shift, with increased extracellular fluid. Bibliography (13 items).

**Copy seen:** DLC.

**20464. BARCA, EMIL.** Drei verkannte Gelechiden, die aus Norwegen beschrieben sind. (Entomologisk tidskrift, 1932. Årg 53, häft 1, p. 31-35, illus.) **Title tr.:** Three neglected species of *Gelechia* described from Norway.

*Contains* critical description of three species of lepidopterous genus *Gelechia* incompletely or wrongly described by previous authors, including *G. norvegiae* from Nordland and Finnmark and *Xystophora saltanella*, first described as *G. saltanella*, native to Nordland.

Contains characteristics (in brief) of the coleopterous family Lycidae, keys to the genera, species and subspecies and description of 22 species and forms, including at least one species *Dictyopectera aurora*, native to Lapland and all Siberia.

**Copy seen:** MH-Z.

**20478. BARRER, BERT, and MARY BARRER.** The Haines' Highway, freightway to the interior of Alaska. (Highway magazine, June 1949. v. 40, p. 135-38, incl. illus. map)

"The Haines Highway, a supply line of the Alaska Highway, is built on a foundation of natural gravel or rock for most of the 154 mi. length. One short section crosses glacial silt which washes onto the roadway in the rainy season. This section is kept clear with a road grader. The section of the highway in Alaska (42 mi.) is kept open all year. Snowdrifts are not a problem because much of the road is built above the level of the surrounding terrain. Bulldozers are used to remove ice which forms on the road when seepage water freezes." —Road abstracts. **Copy seen:** DLC.

**20490. BARTZ, FRITZ.** Alaska. Stuttgart, K. F. Koehler, 1950. 4 p.l., 384 p. 24 plates, 14 maps (4 fold.) (Geographische Handbücher; hrsg. von Hermann Lautensach) text in German.

*Contains* an outline of the economic and human geography of Alaska based on published literature, and on the author's observations during visits to Alaska (in all, nine months' stay) in the period 1936-38. Chapters on: (1) Natural characteristics: surface features, climate, ice age and present glaciation, vegetation and fauna. 2. Natives before the white man's advent: distribution and regional adaptation of different groups, and problem of the origin of the natives. 3. Colonization by the white man: development under the Russians, and the Americans. 4. Modern economy of Alaska: fisheries, mining, agriculture (including colonization), forestry, reindeer industry, and the fur trade. 5. Man and his settlement in present day Alaska: native and white distribution, way of life and regional differences, colonization, commerce, and changes wrought by World War II. Bibliography (214 items). Reviewed by R. H. Coats in *Arctic*, Sept. 1951. v. 4, no. 2, p. 131-33.

*"The movement of the Frøya Glacier [74°20' N. 20°50' W.] was observed from 2 stations every 30 min. for 24 hrs. over a period of 3 weeks. The velocity over a cross-section of the glacier was determined by measuring with a theodolite at a fixed point the angular displacement of a series of stakes set in 80 cm. bore holes. A plot of the movement of the line of stakes show 2 zones of greatest speed separated by a zone of slower moving ice. The flow is irregular over short periods and is attributed to Block-Schollen movement. The distribution of thrust planes has no noticeable effect on the flow. Investigations of a subglacial stream bed on the Skille Glacier [Clavering Ø] revealed an ice thickness of 76 m. at a point 500 m. from the glacial snout.*

Medial moraines were observed at the base of the glacier."—SIPRE.

**20511. BAXTER, DOW V.** Arctic twilight. (Asa Gray bulletin, July 1952. New ser. v. 1, no. 3, p. 203-210, illus.)

Contains an informal account of the author's collecting trip in 1949 to Wiseman, Alaska, about 200 miles north of Fairbanks on the upper Koyukon; the flight thither, the people and life, celebrated by Robert Marshall in his *Arctic village*; the author's activities collecting fungi and identifying trees; notes on the Brooks Range and on some phytogeographic problems. *Copy seen:* DSI-M.

**20512. BAXTER, HAMILTON, and M. A. ENTIN.** Experimental and clinical studies of reduced temperatures in injury and repair in man 3; direct effect of cooling and freezing on various elements of the human skin. (Plastic & reconstructive surgery, May 1948. v. 3, p. 303-334, 105 fig. on 6 plates)

Contains a study on "direct" effect of cold on human skin, at four temperature levels, two of them below the freezing point ( $-4^{\circ}$  F. and  $-108^{\circ}$  F.). The "direct" method consists in exposing split-thickness skin grafts to cold, then transplanting them along with suitable controls to the original donor (or to a different recipient) and following their behavior clinically and microscopically by means of biopsies. Temperatures slightly below freezing did not materially affect the survival of skin grafts up to three weeks of cooling, but even short exposures to  $-4^{\circ}$  F. and  $-108^{\circ}$  F. were not compatible with survival owing to ice crystal formation. The clinical pictures were only understood when correlated with frequent microscopic studies of biopsies. The practical value of the study is that split-thickness skin grafts can be stored up to three weeks at  $32^{\circ}$  F. and still be successfully transplanted. Bibliography (17 items).

*Copy seen:* DLC.

**20513. BAXTER, HAMILTON, and M. A. ENTIN.** Experimental and clinical studies of reduced temperatures in injury and repair in man 4; the effect of cold on vascular elements of human skin. (Plastic & reconstructive surgery, Mar. 1950. v. 5, p. 193-216, 4 text fig., 30 fig. on 3 plates)

Contains a report and discussion of sequelae following cold injury under controlled conditions in man. Effects of three temperature levels were studied ( $65^{\circ}$  to  $50^{\circ}$  F.,  $32^{\circ}$  F.,  $-180^{\circ}$  F.), on normal intact skin, on traumatized skin, and on

pedicles; the clinical and histological picture is presented and analyzed. The main emphasis of the study is on the changes in vascular elements. Suggestions as to clinical management are also offered. Bibliography (36 items).

**20518. BAZETT, HENRY CUTHBERT, 1885-** , and others. Precooling of blood in the arteries, effective heat capacity and evaporative cooling as factors modifying cooling of the extremities. (Journal of applied physiology, Aug. 1948. v. 1, p. 169-82, 5 fig.) *Other authors:* E. S. Mendelson, L. Love, and B. Libet'.

*Contains* a study on cooling of the extremities exposed to low temperatures, as influenced by precooling of blood in the arteries, heat capacity of the tissues and clothing, and evaporative cooling. Precooling of blood produced some paradoxical changes in surface temperatures, both during cooling and rewarming. Heat capacity and the rate of cooling, convective heat loss, etc., are also discussed. Bibliography (16 items).

**20519. BAZETT, HENRY CUTHBERT, 1885-** . The regulation of body temperature. (In: Newburgh, L. H., ed. Physiology of heat regulation and the science of clothing, 1949. p. 109-192, diagrs., tables)

*Contains* an outline of "a single hypothesis involving the mechanisms of thermal control" with evidence and observations in its favor, included. Following the exposé of the theory (p. 109-127), support to it is offered with regard to the temperature of the various regions of the

body and their regulation; body temperatures at rest, during and after exercise; surface:interior temperature gradient; regulation of heat production and loss; etc. This is followed by sections on the nervous control of body temperature and its centers; the endocrines and temperature control; time sequence in adjustment to cold and to warmth. In this extensive study the author scrutinizes several established, though poorly documented, ideas and his theories are aimed at stimulating new investigations and approaches. Bibliography (171 items).

**20528. BEER, MICHAEL.** Measurements of gravity in the Canadian Arctic and Greenland. (Canadian journal of research, Sept. 1950. Ser. A, v. 28, p. 535-41, illus., sketch map. Reprinted as Canada. Dept. of Mines and Technical Surveys. Dominion observations. Contributions from the Dominion Observatory, Ottawa, v. 1, no. 5)

"Four determinations of gravity were made during the summer of 1948, with pendulum apparatus of the Dominion Observatory, at Goose Bay, Labrador (latitude 53°), Frobisher Bay, Baffin Island (latitude 64°), Resolute Bay, Cornwallis Island (latitude 75°) and Thule, Greenland (latitude 77°), approximately. The anomalies at the two most northerly stations are comparatively small and those at the two other stations, although larger, do not exceed many that have been observed in other parts of Canada. Norgaard's determination for Thule is confirmed by the author. It is anticipated that these determinations, apart from their immediate interest, will serve as useful reference points for future work in the Canadian Arctic."—Author's abstract. **Copy seen:** CaMAI; DGS.

**20530. BEHNKE, ALBERT RICHARD, 1903-**, and **C. P. YAGLOU**. Physiological responses of men to chilling in ice water and to slow and fast rewarming. (Journal of applied physiology, Apr. 1951. v. 3, p. 591-602, tables, diagrs.).

Experiments on two nude subjects immersed in ice water and a third subject dressed in outdoor winter clothing in cold chamber, showed that skin temperatures fell abruptly and that pains were felt all over body during transitory period of vasoconstriction. After initial rise, rectal, gastric and oral temperatures fell continuously during chilling period despite violent shivering and sixfold increase in metabolic rate. Need for rapid rewarming to prevent a precipitous after-drop of deep temperatures, and associated distress, is imperative.—From author's summary. Bibliography (17 items).

**20540. BELDING, H. S., and others.** Analysis of factors concerned in maintaining energy balance for dressed men in extreme cold; effects of activity on the protective value and comfort of an Arctic Uniform. (American journal of physiology, Apr. 1947. v. 149, p. 223-39, 3 fig., 8 tables). **Other authors:** H. D. Russell, R. C. Darling, and G. E. Folk.

**Contains** a study on what fraction of total energy produced at various levels of activity is lost through sweating, convection and radiation from the skin, warming the inspired air and vaporizing the water in the lungs; also, an assessment of a suit of arctic clothing as a thermal barrier under various conditions of use, and developing a way of predicting under what circumstances this clothing would prove comfortably warm. Two subjects dressed in an Arctic Uniform were studied. Bibliography (19 items).

**Copy seen:** DLC.

**20541. BELDING, H. S.** Laboratory and field studies: Protection against dry cold. (In: Neuburgh, L. H., ed. Physiology of heat regulation and the science of clothing, 1949. p. 351-67, illus., diagrs., tables)

**Contains** an analysis of factors, personal and environmental, required for thermal protection (body activity and length of exposure versus temperature, wind, altitude, etc.) followed by chapters on methods evaluating thermal insulation of clothing, and factors affecting this property. Problems encountered in arctic weather during rest, sleep, exercise, etc., are emphasized. Bibliography (8 items).

**Copy seen:** DLC.

**20542. BELDING, H. S., and others.** Thermal responses and efficiency of sweating when men are dressed in arctic clothing and exposed to extreme cold. (American journal of physiology, Apr. 1947. v. 149, p. 204-222, 3 fig., 8 tables). **Other authors:** H. D. Russell, R. C. Darling, and G. E. Folk.

**Contains** a study of factors involved in heat balance in men exposed to extreme cold, particularly of the role played by the sweating mechanism. The amount of sweating, its efficiency for body cool-

ing and the relationship between sweating and skin temperature, internal temperature, and comfort, were studied in heavily dressed men. Data are offered on individual variations in sweating under identical conditions; week-to-week variability in sweating in the same individual; sweat uptake by various layers of clothing under diverse conditions, etc. The clothing used was the so-called "Arctic Uniform" components of which are given (with weights) on p. 206. Contains a critique of an article N. N. Zubov (published in *Krasnyi flot* (291/4013) Dec. 1951) which was based on a copy of Stepan Andreev's "journal" for 1764 and on reports recently discovered by K. S. Badigin. On the basis of these same documents, also Andreev's "journal" for 1763, Belov reconstructs in detail Andreev's journeys, in the East Siberian sea north of the Indigirka River mouth (roughly 70°-74° N. and 151°-166° E.), intercalating the account with ample quotations from the documents. Admitting the frequent lack of clarity due to want of precise, technical terminology in Andreev's writings, Belov denies that he was ignorant and concludes that he traveled northeast from Chetyrekhtolbovoy (Four Pillars) Island in the Medvezh'i (Bear) Islands group, traveled considerably less distance than reported, and that what he actually saw were hummocks of ice (torosy), which he mistook for land. Andreev's reports of 1763 and 1764 are given in appendices (p. 473-77), and the scheme of his travels on the fold. map. Bibliographical footnotes.

**20583. BENNINGHOFF, WILLIAM S.** Interaction of vegetation and soil frost phenomena. (Arctic, Mar. 1952. v. 5, p. 34-44, incl. illus. map, diagrs.)

"The influence of soil frost on plants and of plants on soil frost is discussed. Permafrost can not be penetrated by living roots, and if at a shallow depth, it imposes limitations on the anchoring functions of tree roots in shallow soils. Frozen ground inhibits lateral movement of soil water and prevents downward percolation. Sites for vegetation are destroyed by progressive thawing of permafrost. Soil surfaces are in places rendered unavailable to plants because of soil stirring, sorting, and transport by frost action as manifested by polygons, pitted tundra, and soil stripes. Plants affect soil frost phenomena by exercising controls on the thermal regime of the soils. Vegetation shields the soil from maximum penetration of heat by shading, decreasing air circulation, retaining moisture in and just above the soil, and by intercepting rain. It is shown that mosses provide a cooling effect, because of low thermal conductivity, large water-holding capacity, and high hygroscopicity. Extensive root systems tend to impede downward percolation of water, thus restricting thaw. Applications of soil frost predictions, on agriculture, forestry, and construction are considered, and future investigations are proposed."—SIPRE. Bibliography (31 items).

**20595. BERG, GÖSTA.** Drinking tubes: some notes from Europe. (Ethnos, Stockholm, 1941. Bd. 6, no. 3-4, p. 98-108, 7 illus.)

Contains description of three Lapp drinking tubes (in Nordiska Museet, Stockholm) made of wild bird bones or reindeer horn, an implement rather rare among present-day Lapps. Northern European sucking-tubes, the author notes, are closely connected with the hard northern winter and its effect on drinking water. An implement similar to these three has a wide dissemination, being known from the Samoyeds, Ostyaks, and Chukchis, also in Africa and North America.

**20626. BERGSØE, PAUL, 1872-** . Where did the Eskimo get their copper? A spectroscopic examination of copper objects in the Ethnographic Department of the National Museum. (Pub. in: Ethnographical studies published on the occasion of the centenary of the Ethnographical Dept., National Museum, København, 1941. Nationalmuseets skrifter. Etnografisk række 1, p. 107-120, illus. tables)

*Contains* an historical sketch of the early use of copper in general; presentation of materials and methods applied and the results of spectroscopic examinations of native copper from arctic and

northern America, Siberia and the Faroes; and comment that arctic native copper is easily distinguished by its relative purity, also its silver content, and is without regional differentiation, so that any determination of migrations of Eskimos by means of analysing objects of native copper is not possible; results also of similar examinations of non-Greenlandic and East Greenlandic copper tools and of Eskimo copper from the Thule District in North Greenland; also of old Swedish copper coins and Danish skillings and half skillings. The Eskimo tools from East Greenland showed a composition very similar to that of Danish copper (coins). Author comments on "fact that the now extinct Eskimo so high up as at Nordostrundingen used copper originating from Europe." Bibliography (24 items).

Ludloff; suivie d'une description géographique de ce pays et de quelques détails sur les chasseurs russes. (Journal des voyages, découvertes et navigations modernes 1819. t. 2, p. 129-55) **Title tr.:** Note on a voyage of discovery to Novaya Zemlya, undertaken in 1807 by M. Ludloff, with a geographic description of this country and some details on Russian hunters.

Ludlov was sent to Novaya Zemlya by the governor of Novgorod in the hope of discovering silver deposits. His explorations, as recounted to Berkh (a noted Russian naval officer and explorer) and hitherto unpublished, were along the west coast between Matochkin Shar and Proliv Kostin Shar. This article gives a description (supplied by Berkh) of the two islands of Novaya Zemlya as then known, remarks on the surface features of the western coast of the southern island as observed by Ludlov, and (in detail) an account of hunters from the Arkhangel'sk region who made annual

trips to Novaya Zemlya (some wintering there) for fox pelts, sealskins and walrus oil for the Russian market. The personnel of these hunting parties, financial methods, the hunting equipment and practices, the huts and way of life on the island are described; also the animal life, birds, vegetation, and seasonal aspects of Novaya Zemlya. Reindeer are mentioned as providing the hunters with antidote for scurvy. **Copy seen:** DLC.

Contains descriptions of beetles from various regions, including *Atheta depressicollis* Sydvaranger, Norway, and *A. (Oreostebe) glaciei* n. sp. native to West Spitsbergen (Advent Bay).

**Copy seen:** MH-Z.

**20632. BERNHAUER, MAX, 1866-**. Neue Staphyliniden der palaearktischen Fauna. (Koleopterologische Rundschau, 1928-1929, pub. 1928. Bd. 14, no. 1, p. 8-23) **Title tr.:** New Staphylinidae of palaearctic fauna.

Contains diagnoses of 25 new species and 2 new varieties of rove beetles from various palaearctic regions, including *Atheta (Arctostiba) freyi* n. sp., from Dudinka on the lower Yenisey River and *Phloeodroma kamtschaticum* n. sp., collected in Kamchatka Peninsula.

**Copy seen:** MH-Z.

**20633. BERNHAUER, MAX, 1866-**. Zwei neue nordische Atheten. (Entomologisk tidskrift, 1931. Årg. 52, häft. 3-4, p. 200-201) **Title tr.:** Two new northern *Atheta* species.

Contains a German diagnosis of the beetle *Atheta (Metaxya) hidrothi* n. sp. collected in Abisko, Swedish Lapland.

**Copy seen:** MH-Z.

**20634. BERNSTEIN, JOSEPH G.** The effect of thermal environment on the morphology of the thyroid and adrenal cortical glands in the albino rat. (Endocrinology, June 1941. v. 28, p. 985-98, 5 figs.) Abridgement of dissertation, Ph. D. New York Univ.

Contains a study of the effects of varied thermal environment on the histology of

the thyroid and adrenal cortex. Quantitative and qualitative changes were found in the cells of these organs according to seasonal changes, but could not, in all cases, be related with changes in environmental temperature. Results of investigations on experimentally altered thermal environment, and on artificially induced fever, are also reported. Bibliography (43 items). **Copy seen:** DLC.

**20635. BERR, R.** Les gisements de charbon du Spitsberg. (Annales des mines, Paris. Mémoires, mars 1914. Sér. 11, t. 5, p. 125-97, illus. (inc. 6 sketch maps), 3 fold maps). **Title tr.:** Coal deposits of Spitsbergen.

*Contains* general description of the political and geographic situation of Svalbard; sketch of its stratigraphy and tectonics; history of early 20th century coal mining and research of the American, British, Swedish, Norwegian and Russian companies and governments, with a few results of analyses of coal samples from Swedish mines; Coal deposits on Bear Island (Bjørnøya) are also dealt with. Bibliography (13 items). **Maps:** (1) geologic map of West Spitsbergen scale 1:2,500,000; (2) geologic map of central West Spitsbergen (Isfjord region) scale 1:600,000; (3) map of the coal district of central West Spitsbergen showing company and national holdings, scale 1:900,000. **Copy seen:** DGS.

**20635A. BERRY, A. MATT.** Transportation in the Northwest Territories. (Precambrian, Nov. 1945. v. 18, no. 11, p. 13, 15). An address by the general manager of Northern Transportation Co., Ltd. before the Canadian Institute of Mining and Metallurgy, Oct. 16, 1945, sketching the water, road and air transportation problems and making specific recommendations for improvement. Editorial note at end outlines federal projects to improve transportation by road and water in Mackenzie District.

**Copy seen:** DGS.

**20636. BERRY J. M.** Royal Canadian Army Service Corps in northern trials and operations. (Arctic circular, Jan. 1951. v. 4, p. 3-10, map)

Survey of the programs and results of arctic and subarctic tests and activities during 1947-50, in which the tractor train has been established as a feasible means of transport under northern conditions; in which personnel has been trained for maintenance and operation

of tractors, and equipment and methods tested for transporting and maintaining personnel under winter conditions. Vehicles mentioned (without descriptions) are penguins, bombardiers (snowmobiles), wannegans (caboozes), and cargo sleighs. Exercises mentioned are Exercise Moccasin, 1947-48, R. C. Signals Exercise Sigloo, 1948-49, Operation Ennadai I, 1949, and Infantry Exercise Sun Dog I, 1950. **Copy seen:** CaMAI; DLC.

**20637. BERTHELSEN, ASGER.** A Pre-Cambrian dome structure at Tovqussaq, West Greenland. (Dansk geologisk forening. Meddelelser, 1950. Bd. 11, p. 558-72, illus., 4 sketch maps).

*Contains* a description of the various structural elements and the development of "a tilted pressed-up dome ('an unborn diapire') near the fishing village of Tovqussaq, Godthaab district, Greenland. Bibliography (13 items). Summary in Danish. **Copy seen:** DGS; DLC.

**20638. BERTRAM, G. COLIN L.** Launcelot Fleming: an appreciation by G. C. L. B. (Polar record, Jan. 1950. v. 5, no. 39, p. 396-97, port.)

Biographical sketch of Rev. W. L. S. Fleming, noting his activities as polar scientist and naval chaplain, and his consecration Oct. 18, 1948 as Bishop of Portsmouth; tribute to his work as director of the Scott Polar Research Institute, 1946-49, and as polar explorer, geologist, educator and priest.

**Copy seen:** CaMAI; DLC.

**20639. BERTRAM, G. COLIN L.** Pribilof fur seals. (Arctic, Aug. 1950. v. 3, p. 75-85, illus.)

Brief summary "of the discovery, exploitation and eventual conservation of the fur seal herd"; description of the present governmentally controlled régime, based on observations in 1949; and remarks on problems of the future, computation, biological factors and other questions needing further study.

**Copy seen:** CaMAI; DLC.

**20640. BERTRAM, G. COLIN L.** The Scott Polar Research Institute. (Arctic, Oct. 1952. v. 5, no. 3, p. 153-56, illus.)

*Contains* an account (by the present director) of the origin of the Institute as a center for maintaining continuity of research in techniques of polar life and travel; its founding in 1925 within the University of Cambridge, with endow-

ment from the Memorial Trust of Captain Scott. Its subsequent history, services and facilities are described, the building occupied in 1934, the collection of polar equipment, exhibits, extensive library, publication of the *Polar record*.

**Copy seen:** CaMAI; DLC.

**20641. BERTRAND, HENRI.** Notice sur les larves de Dytiscides de la collection Meinert. (Entomologiske meddelelser, 1931. Bd. 17, hefte 4, p. 286-305, illus.) **Title tr.:** Note on the larvae of Dytiscidae of Meinert's collection.

**Contains** a critical revision of the larvae of water-beetles in the collection of Fr. Meinert, including description of the larva of *Hydroporus melanocephalus*, found in Greenland. **Copy seen:** MH-Z.

**20642. BETEKHTIN, ANATOLIĬ GEORGIEVICH.** Aleksandr Nikolaeovich Zavariĭskii. Moskva-Leningrad, Izd-vo Akademii nauk, 1946. 38 p. (Akademiia nauk SSSR. Materialy k bio-bibliografii uchenykh SSSR. Seriiia geologicheskikh nauk, vyp. 7)

**Contents tr.:** Important dates in the life and scientific activity of acad. A. N. Zavariĭskii, p. 3-4; characteristics of his scientific and educational work, p. 5-19, bibliography of his publications, compiled by N. M. Asafova and O. V. Isakova (about 160 items) p. 20-36, and indices. Includes many papers on vulcanology of Kamchatka and some on geology of the Northern Ural. **Copy seen:** MH.

**20643. BETEKHTIN, ANATOLIĬ GEORGIEVICH.** Novye dannye po geologii Polunochnogo mestorozhdeniia margantsa na Severnom Urale. (Akademiia nauk SSSR. Izvestiia. Seriiia geologicheskaiia, 1944, no. 4, p. 59-69, illus.) **Title tr.:** New data on the geology of the Polunochnoye manganese deposit in the Northern Urals.

"Concludes that the Polunochnoye manganese deposit on the east slope of the north Urals, Russia, has less width than the Chiaturo deposit in Transcaucasia, Russia, because subsidence of the basin in which the Polunochnoye deposits were laid down was greater than that in the Chiaturo basin of deposition."—Geological Society of America. *Bibliography and index of geology*, 1943-44, v. 10, p. 11. Summary in English.

**20646. BĬĀLYNITSKII-BĬRULĬĀ, ALEKSEĬ ANDREEVICH, 1864-1937.** Beiträge zur Kenntnis der Crustaceen-Fauna des Kara-Basens und des Unterlaufes des Flusses Kara. (Akademiia nauk SSSR. Zoologicheskii institut. Trudy, 1937. t. 4, vyp. 3-4, p. 701-742, illus.) **Title tr.:** Contributions to the knowledge of the crustacean fauna of Kara Bay and the lower course of Kara River.

Results of the study of amphipodous crustaceans (Crustacea Amphipoda) collected by the Expedition of A. N. Probatov in 1932-33. Brief geographic sketch of the lower Kara River and Bay region (69° N. 64°30' E.), and description of seven new or little-known species, including *Gammarus wilkitzkii karae-fluminis* n. subsp., *G. pulex karae* n. subsp. and *Pontoporeia affinis gurbanovae* n. subsp., with ecological data. Summary in Russian.

**Copy seen:** DLC; MH-Z.

**20647. BĬĀLYNITSKII-BIRULĬĀ, ALEKSEĬ ANDREEVICH, 1864-1937.** Ixo-

didae novi vel parum cogniti Musei Zoologici Academiae Caesareae Scientiarum Petropolitanae, I. (Akademiia nauk SSSR. Izvestiia. Serii 5, 1895. t. 2, no. 4, p. 353-64, plates 1-2) **Title tr.:** New or little known Ixodidae of the Zoological Museum of the Imp. Academy of Sciences of St. Petersburg, I.

**Contains** a key to the species of the ticks of the genus *Argas* and diagnoses of seven new species from various regions, including *Ixodes hirsutus* and *I. signatus* n. spp. native to Unalaska Island in the Aleutians. **Copy seen:** MH.

**20648. BIALYNIŤSKIĬ-BIRULĬA, ALEKSEĬ ANDREEVICH, 1864-1937.** K voprosu o geograficheskikh formakh belogo medvedia (*Thalassarctos maritimus* Phipps). Materialy po sistematike i geograficheskomu rasprostraneniui mlekoпитаushchikh, VII. (Akademiia nauk SSSR. Zoologicheskii institut. Trudy, 1932. t. 1, vyp. 1, p. 99-134, 3 plates) **Title tr.:** On geographic forms of white polar bear (*Thalassarctos maritimus*). Contributions to systematics and geographic distribution of mammals VII.

**Contains** a study of six geographic races of the polar bear (*Thalassarctos maritimus*) from Greenland, Svalbard, Labrador, Novaya Zemlya, Taymyr Peninsula, Lena region and Ellesmere Land, based on craniological data; a comparison of the Spitsbergen and Siberian bears, tables of skull and other external dimensions, and a discussion of methods of skull measurement. Summary in German. **Copy seen:** DLC; MH-Z.

**20649. BIALYNIŤSKIĬ-BIRULĬA, ALEKSEĬ ANDREEVICH, 1864-1937.** Kolleksiia bezpozvonochnykh, sobrannaia A. S. Botkinym. (Akademiia nauk SSSR. Zoologicheskii muzel. Ezhegodnik, 1896. t. 1, p. VII-IX) **Title tr.:** The collection of invertebrates made by A. S. Botkin.

**Contains** a general survey of a small collection of invertebrates from the Yenisey and Ob' Bays, and a preliminary description of a new isopodous species *Glyptonotus sibiricus* and comparison with another species *G. entomon*.

**Copy seen:** DLC; MH-Z.

**20650. BIALYNIŤSKIĬ-BIRULĬA, ALEKSEĬ ANDREEVICH, 1864-1937.** Materialy dlia biologii i zoogeografii preimushchestvenno russkikh morei, I. K

faunae meduz Solovetskago zaliva. (Akademiia nauk SSSR. Zoologicheskii muzel. Ezhegodnik, 1896. t. 1, no. 4, p. 327-54) **Title tr.:** Materials on biology and zoogeography, principally in Russian seas, I. On the medusa fauna of Solovetskiy Bay.

**Contains** a key to the species and an enumeration of 17 species of hydromedusae found in Solovetskiy Bay of the White Sea, with synonymy, Russian descriptions and critical notes.

**Copy seen:** DLC; MH-Z.

**20651. BIALYNIŤSKIĬ-BIRULĬA, ALEKSEĬ ANDREEVICH, 1864-1937.** Materialy dlia biologii i zoogeografii preimushchestvenno russkikh morei, II. Hydrozoa, Polychaeta i Crustacea, sobrannyya d-rom A. S. Botkinym v Eniseiskoi i Obskoi gubakh, lietom 1895 goda. (Akademiia nauk SSSR. Zoologicheskii muzel. Ezhegodnik, 1897. t. 2, no. 1, p. 78-116, plates 9-10) **Title tr.:** Materials on biology and zoogeography, principally in Russian seas, II. Hydroids, polychaetes, and crustaceans collected by Dr. A. S. Botkin in the summer of 1895 in Yenisey and Ob' Bays.

**Contains** a general description of the fauna of Kara Sea and an enumeration of four species of hydroids (one new), four annelid worms (one new) and ten crustaceans (one new) collected by Dr. A. S. Botkin in the Yenisey and Ob' Bays; a few other species from the collections of the Zoological Museum, native to the White and Murmansk (i. e. southern Barents) Seas are described for comparison. **Copy seen:** DLC; MH-Z.

**20652. BIALYNIŤSKIĬ-BIRULĬA, ALEKSEĬ ANDREEVICH, 1864-1937.** Materialy dlia biologii i zoogeografii preimushchestvenno russkikh morei, III. Ocherk fauny Crustacea-Decapoda morei Murmanskago i Belago. (Akademiia nauk SSSR. Zoologicheskii muzel. Ezhegodnik, 1897. t. 2, no. 4, p. 405-452, plates 20-22) **Title tr.:** Materials on biology and zoogeography, principally in Russian seas, III. Crustacea-Decapoda fauna of the Murman and White Seas.

**Contains** a review of collections, critical review of literature on the fauna of the investigated region, a key to the genera and species of the order Decapoda and descriptions of 26 decapods of the White and Barents Sea, synonymy, critical

notes, data on distribution and a zoogeographic sketch.

**Copy seen:** DLC; MH-Z.

O littoral'noi oblasti, v beregovoi polosie Shpiĭsbergena. (Akademiĭa nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1906, pub. 1907, t. 11, p. 115-25) **Title tr.:** Materials on the biology and zoogeography, principally in Russian seas, VIII. On the littoral zone of the coast of Spitsbergen.

**Contains** a discussion on the littoral zone of West Spitsbergen based on the author's hydrological and zoological observations in Storfjord, Hornsund and Isfjord in 1899 and comparison with the littoral fauna of the White and Barents (Murman) Sea.

**Copy seen:** DLC; MH-Z.

**20658. BĬALYNITSKIĬ-BIRULĬA, ALEKSEĬ ANDREEVICH, 1864-1937.** Studien über die Chironomiden der Arktis.

(Konowia, 1935. Bd. 14, heft 3, p. 230-240, illus.) **Title tr.:** Studies on Chironomidae of the Arctic.

**Contains** descriptions and dimensions of two new types of larvae of midges of the family Chironomidae: *Tanytarsus* (subgen.?) sp. larva *variegata* A. B. and *T. sp. larva pedicellifera* A. B. collected in fresh-water basins in the lower Pechora River region, Arkhangel'sk province.

**Copy seen:** MH-Z.

**20659. BIĀLYNITSKIĬ-BIRULIĀ, ALEKSEĬ ANDREEVICH, 1864-1937.** Über die russischen Wespen und ihre geographische Verbreitung. (Zweiter Beitrag); —(Dritter Beitrag). (Akademiā nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1927. t. 28, vyp. 1, p. 72-82; (III) 1930, t. 31, vyp. 2, p. 291-339, illus., 2 text maps). **Title tr.:** On Russian wasps and their geographic distribution. Contributions, II-III.

**Contains** (in pt. II) a key for three species of Russian wasps (gen. *Vespula*), descriptions and data on distribution; includes *V. media* occurring in Nordland, Norway (68° N.); in pt. III is a critical study of three species of *Vespula* with descriptions of numerous morphae, comparative tables and data on distribution; includes *norvegica* distributed from northern Norway through northern Eurasia to Kamchatka and *V. norvegica pacifica* n. subsp. native to Kamchatka Peninsula; pt. I (Archiv für Naturgeschichte, 1924. Abth. A. v. 90) does not include arctic material.

**Copy seen:** DLC; MH-Z.

**20660. BIĀLYNITSKIĬ-BIRULIĀ, ALEKSEĬ ANDREEVICH 1864-1937.** Zoologicheskie rezul'taty russkikh-ekspeditsii na Shpitsbergen. Biologicheskii nablūdeniā nad ptitsami Shpitsbergena. (Akademiā nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1910. t. 15, no. 1, p. 167-206, illus., 2 plates) **Title tr.:** Zoological results of the Russian expedition to Spitsbergen. Biological observations on the birds of Spitsbergen.

**Contains** the author's observations on the biology and ecology of 15 species of arctic birds, made mostly on the western coast of West Spitsbergen during the Russian expeditions to Spitsbergen for the measurement of an Arc of Meridian in 1899.

**Copy seen:** DLC; MH-Z.

**20661. BIĀLYNITSKIĬ-BIRULIĀ, ALEKSEĬ ANDREEVICH, 1864-1937.** Zoo-

logische Ergebnisse der russischen Expeditionen nach Spitzbergen. Crustacea-Decapoda. (Akademiā nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1906, pub. 1907. t. 11, p. 1-114, illus., map) **Title tr.:** Zoological results of Russian expedition to Spitsbergen. Crustacea-Decapoda.

**Contains** a synopsis of 16 species of decapods of West Spitsbergen with synonymy, list of stations and data on distribution in Svalbard waters, the content of the material collected being arranged by stations. Includes a discussion of distribution of these crustaceans in Svalbard and in northern European and Asiatic waters (a comparative table); based mostly on material collected during the Expedition for the Measurement of an Arc of Meridian, 1899-1902.

**Copy seen:** DLC; MH-Z.

**20677. BIERMAN, WILLIAM.** Conductive cooling of living human tissue. (Society for Experimental Biology and Medicine. Proceedings, Nov. 1939. v. 42, p. 518-20)

*Contains a report on a series of experiments which demonstrated that it is possible to lower substantially the temperature of the tissues of the living human body at a distance from a cold applicator placed on the body surface. An explanation of this phenomenon is offered in vasoconstriction and conductive cooling. (Preliminary paper).*

*Copy seen: DLC.*

**20678. BIERMAN, WILLIAM, and M. FRIEDLANDER.** The penetrative effect of cold. (Archives of physical therapy, Oct. 1940. v. 21, p. 585-92)

*Contains a report on observations on penetrative effects of cold applied locally to the leg, cheek, rectum, vagina, abdomen, and head. Bibliography (6 items).*

*Copy seen: DLC.*

**20679. BIGELOW, W. G., and others.** Hypothermia; its possible role in cardiac surgery; an investigation of factors governing survival in dogs at low body temperatures. (Annals of surgery, Nov. 1950. v. 132, no. 5, p. 849-66, 4 fig.) *Other authors: W. K. Lindsay and W. F. Greenwood.*

*Contains results of experiments with hypothermic dogs (the shivering controlled by anesthetics), made for the purpose of studying the physiology of the cardiovascular system and the mechanism of death at low body temperature. As cooling advanced there was a gradual fall of blood pressure, heart rate and cardiac output, with a comparable rise on re-warming; intense vasoconstriction, vascular stasis with erythrocyte agglutination, were observed at low body temperatures; venous pressure proved a valuable guide to the condition of the heart and its prolonged increase was often followed by "cardiac crisis," which could be temporarily forestalled by venesection; ventricular fibrillation usually caused death between 16° and 22° C., venesection and immediate re-warming caused a return from fibrillation to nor-*

mal, with revival. Other possible causes and factors of death are also discussed. Bibliography (42 items).

**Copy seen:** DLC.

**20680. BIGELOW, W. G., and others.** Oxygen transport and utilization in dogs at low body temperatures. (American journal of physiology, Jan. 1950. v. 160, p. 125-37, 10 fig.) Other authors: W. K. Lindsay, R. C. Harrison, R. A. Gordon, and W. F. Greenwood.

Contains a study on oxygen consumption of dogs made hypothermic to 18° C., aiming to correlate observed values with oxygen requirements of the tissues in hypothermia. Oxygen consumption was found to fall consistently with reduction of body temperature down to 18° C., and rose in a parallel way upon rewarming. No tissue-oxygen deficit developed during the period of cooling. Bibliography (25 items).

**20681. BIJL, W. van der.** Midden op de Groenlandse ijsvlakte. (Hemel en dampkring, May 1950. Jaarg. 48, afl. 5, p. 92-94) **Title tr.:** In the middle of Greenland's icecap.

Extreme temperatures as observed by the French Arctic Expedition of P. É. Viator during the fall and winter of 1949-50, are compared with those found by the Wegener Expedition in 1930-31, and those in Siberia. "Lower extreme temperatures (-53° C.) occurred in the autumn at the icecap station than in the free air at the same elevation, owing to radiation properties of snow and ice. A profile of Greenland at 70° [N.] shows 6 meteorological stations and topography of sea, mountains and ice."—*Meteorological abstracts and bibliography*, Sept. 1950. v. 1, no. 9, p. 566.

**Copy seen:** DLC.

**20682. BIJL, W. van der.** Een warmte-record op "Eismitte." (Hemel en dampkring, Dec. 1950. Jaarg. 48, afl. 12, p. 215-16) **Title tr.:** A heat record at Eismitte.

"It is reported for the first time that on June 21, 1950 the temperature at Eismitte [on Greenland inland ice at 71°11' N. 39°54' W. 3000 m. above sea level] rose above 0° C. The mean daily temperature was -1.4° C. and light rain fell at 1500 hr. The preceding day the barometric pressure attained 709 mb., snow mixed with rain drops fell from stratocumulus clouds; southerly winds and cloud cover at night prevented ex-

treme drop in temperature. In 1930-31 Wegener reported an absolute maximum of -2.8° C. and mean of -6.2° C. for the warmest day. On Feb. 22, 1950, a mean daily temperature of -63.4° C. and a minimum temperature of -66° C. were reported. The absolute minimum [reported by the Wegener party] March 1931 was -64.8° C."—*Meteorological abstracts and bibliography*, Nov. 1951. v. 2, no. 11, p. 898.

**20690. BIRD, JOHN BRIAN.** The physiography of the middle and lower Thelon basins. (Geographical bulletin, 1951, No. 1, p. 14-29, illus., sketch maps)

Author outlines general physiography of the relatively accessible but still unexplored District of Keewatin west of Hudson Bay; the field study made by a four-man party under the Canadian Geographical Bureau, of the Thelon basin west from Baker Lake to Hornby Point in the Thelon Game Sanctuary during July-Aug. 1948. He remarks on evidence of ice movement in Thelon basin, applies theory of the icecap, centered in Hudson Bay, notes evidences of glaciation observed throughout the region and modification of the landscape due to glaciation; local effects of climate, particularly frost action. On the basis of present physiography and topography Thelon basin is divided into five physiographic regions, and each is described in detail.—From author's abstract. **Copy seen:** CaMAI.

**20691. BIRDELL, JOSEPH B.** The problem of the early peopling of the Americas as viewed from Asia. (In: Viking Fund Summer Seminar in Physical

Anthropology, 4th Sept. 1949. Papers on . . . the American Indian, 1951, p. 1-68, 68a)

A reconstructed pattern of the peoples of eastern Asia, as well as the scanty archeological evidence suggest a di-hybrid origin of the American Indians. The two racial elements present in northeastern Asia at the assumed time of peopling of the New World were Amurians and Mongoloids, the former occupying temperate Asia since early times, the latter rapidly evolved at the end of the Pleistocene in northeastern Asia, under extreme, dry, arctic condition. Present-day Indians reveal two apparent centers of Amurian traits: the Cahuilla tribes of inland southern California, and the Pomo and Yuki tribes of coastal northern California. Author believes that the reconstructions of various specialists have been greatly influenced by their specific methodological approaches and there is considerable doubt as to the biological validity of their techniques. He calls for a reevaluation of basic biological assumptions now in use, and introduction of new methods and approaches. Bibliography (70 items).

**20696. BIRKET-SMITH, KAJ, 1893-** . Eskimo cultures and their bearing upon the prehistoric cultures of North America and Eurasia. (In: International symposium on early man. Academy of Natural Sciences of Philadelphia, 1937. Early man, p. 293-302)

*Contains* discussion on archeological and ethnological problems of the Eskimo

mos' cultural origin. Thule, Dorset and Bering Sea cultures are reviewed, with conclusion "that archeology so far leaves us in the dark, when we ask about the origin of Eskimo culture." Turning to ethnology, the author describes the Caribou Eskimos of the Barren Grounds of Canada west of Hudson Bay, as having no connection with the sea, hunting caribou and fishing, their culture of an extremely primitive character; he suggests these Caribou Eskimos to be the last remnant of the primitive or Proto-Eskimo people. The Indians of the interior regions of Canada are noted as having in summer practically the same life as the Eskimos, but in winter a life entirely dependent upon the snowshoe. Two periods in the cultural development of northern North America are stressed: (1) characterized by ice-fishing (Caribou Eskimos); and (2) characterized by sealing on the ice (coastal Eskimos), or by hunting on snowshoes (woodland Indians). Ice-fishing survived to a remarkable extent also among the Yukaghirs, and there are reasons for believing that the ice-fishing culture once extended over the whole circumpolar region.

**Contains** description and comments on two anonymous, undated hand-drawn maps, delineating Siberia from Tobolsk to Bering Strait and entitled "Map compiled during Captain Bering's Siberian expedition from Tobolsk to Cape Chukotskoj." One, drawn in india ink on paper (58 x 135 cm.), with Russian title and place names, is decorated with ten water-color sketches of various ethnic types of northern Asia. The other is similar but simpler in execution, lacking the water-color sketches, and having the

(more numerous) place names transcribed into Latin characters, some being translated into Swedish. In "Addendum" G. Montell comments on the ethnic types drawn and named on the first map.

**20709. BLACK, ROBERT FOSTER, 1918-** . Eolian deposits of Alaska. (Arctic, Sept. 1951. v. 4, no. 2, p. 89-111, illus., maps)

Based on the author's visit of the major areas of eolian (wind) deposits of Alaska and on published and unpublished information from other workers (whose areas of detailed studies are indicated on map 2). Author notes that only a small proportion of the eolian deposits can be shown on map (1) due to complexities caused by vegetation, reworking of streams, frost action, etc., which tend to obliterate or remove the deposits. Three major groups of eolian deposits (of Pleistocene to Recent age) are dealt with: those of the coastal plain of northern Alaska, the areas associated with glacial streams and the coastal margins. The extent, size, morphology, probable genesis and subsequent changes of the deposits are discussed, together with their character, composition, age, etc. A brief account of ash deposits concludes the paper. Bibliography (about 40 items).

**20711. BLACK, ROBERT FOSTER, 1918-** . Permafrost. (In: Applied sedimentation, edited by Parker D. Trask. New York, John Wiley 1950, p. 247-75, map, graphs)

"Conventional construction methods cannot be used in permafrost areas. Adequate precautionary measures are assured by a preliminary study determining whether the permafrost is growing, is stationary, or is receding. Construction techniques not disturbing the permafrost are termed passive methods, and procedures involving removal or continual thawing of the permafrost are called

active methods."—SIPRE. Bibliography (109 items).

This paper was reprinted with slight changes (see item following).

**Copy seen:** DGS; DLC.

**20712. BLACK, ROBERT FOSTER, 1918-** . Permafrost. (In: Smithsonian Institution. Annual report for the year ending June 30, 1950, pub. 1951, p. 273-301, incl. illus., graphs)

"Much of northern Asia and northern North America contains permafrost or perennially frozen ground. Permafrost achieves a maximum thickness of 1000-2000 feet at some distance south of the Arctic Ocean. The temperature within the frozen mass varies from 0 to -12° C. Permafrost represents an impervious zone and greatly increases the amount of groundwater in the overlying areas. The seasonal freezing and thawing of this saturated soil accelerates weathering processes and results in slides and soil flows which modify existing landforms. Foundations for buildings and roads may be damaged or destroyed through frost action associated with permafrost regions. Stability of structures may be assured by use of proper insulation to prevent thawing of the permafrost layers or by removal of the permafrost accompanied by a backfill of suitable ballast material. The water in permafrost regions has a high mineral content and is not readily available for normal consumers' use. The disposal of sewage through the impervious frozen layers is impossible and represents a major engineering problem. A thorough understanding of permafrost and permafrost problems must be obtained through study and research on the heat transfer relations between the earth's constituents and the atmosphere. Numerous geological and engineering problems remain to be examined by laboratory and field techniques."—SIPRE. Bibliography (116 items).

This paper is a reprint of the item above with minor modifications and some new references, "but no attempt has been made to revise the paper completely or to list all new permafrost papers."

**20713. BLACK, ROBERT FOSTER, 1918-** . Polygonal patterns and ground conditions from aerial photographs. (Photogrammetric engineering, Mar. 1952. v. 18, no. 1, p. 123-34, 10 illus.)

Contains presentation of polygons as a micro-relief feature of potential use in

aerial photographic interpretation techniques to determine permafrost or seasonal frost action. Author (1) reviews literature in which polygons are described and in which their significance in interpretation of their physical environment is appraised; (2) emphasizes the widespread distribution of these features and their complexity. The physical environments, multiplicity of forms in different environments and their origins are pointed out; results of some recent research on ice-wedge polygons in northern Alaska are used to refute some statements occurring in the literature.—Foreword. Author notes that knowledge of ice-wedge polygon growth and arctic geomorphology enables the air-photo interpreter to obtain data on size-grade distribution of material, depth of seasonal thaw, and moisture content in the active layer and in permafrost, information required in most construction problems. Bibliography (56 items).

**20722. BLISS, WESLEY L.** Early man in western and northwestern Canada. (Science, Apr. 21, 1939. v. 89, no. 2312, p. 365-66)

*Contains* report on two discoveries made in Canada by the anthropological field party of the University of New Mexico in 1937 and 1938 as part of a program of "work in glaciated and unglaciated areas of Western Canada and Alaska to correlate, if possible, some of the early cultures with glacial chronology. Yuma sites were located in south-eastern Alberta and southwestern Saskatchewan (the Folsom points of Alberta may be dated as post-Pleistocene). Artifacts found near Loon Lake at the top of a pass between the Mackenzie and Yukon drainages about 80 miles south of the arctic coast, are similar to those found at Lake Mohave, Calif. The two discoveries contribute to the problem of the existence of man in North America during the Pleistocene or ice age, and to that of the possible early migration routes from Asia.

**20730. BLY, CHAUNCEY G., and others.** Nutritional requirements of men living under survival conditions in cold weather. (Federation proceedings, Mar. 1949. v. 8, p. 378) *Other authors:* R. E. Johnson and C. F. Consolazio.

For men doing no hard physical work and adequately outfitted against cold, nutrient balance could be maintained by 3400 calories, 2.7 liters water, including beverage, food and metabolic water, 50 gm. protein, mostly animal, 135 gm. fat, 400 gm. carbohydrate, 1.1 gm. calcium, 1 gm. phosphorus, 100 mEq. sodium, 85 mEq. chloride, 20 mEq. potassium. This is daily ration for a man of average (70 kg.) weight.

*Copy seen:* DLC.

**20731. BLY, CHAUNCEY G., and others.** Survival in the cold. (U. S. Armed Forces medical journal, June, 1950. v. 1, no. 6, p. 615-28, diagrs., tables)

Contains report on a study of 32 heat-acclimatized men transferred by air from MacDill Air Force Base, Fla. to bivouac at Camp Shilo in Manitoba, Canada, in winter. The study was designed to gain information problems of adaptation involved in transporting troops into cold regions. The following studies were made and statistically analyzed: anthropometric measurements (weight, height, surface area, etc.) dietary history; medical examination and history; psychiatric observations; functional observations; biochemical measurements; balance studies; hematologic and endocrine measurements; utility, stability and acceptability of rations. Reactions of the objects to cold were studied both as related to diet and independently of it. The experiment offered clear answers on the balance requirements for calories, water, protein, carbohydrate, fat, sodium, potassium, chloride, calcium, and phosphorus. Biochemical, physiologic and hematologic observations suggested that during the first 2 days of abrupt exposure to cold, the men exhibited a general adaptation syndrome, with stimulation

of the pituitary-adrenocortical system. Bibliography (3 items).

*Contains* an account based on an unpublished report by Franz Nusser (of Deutsches Hydrographisches Institut), R. Holzapfel, *Du Tätigkeit des deutschen Wetterdienstes der Luftwaffe in der Arktis während des Krieges*, 1950-51 q. v., also on unpublished papers (in Scott Polar Research Institute) by Otto Kraul and Wilhelm Dege. During 1940-45, thirteen parties were sent by the German navy to Svalbard, East Greenland and Franz Josef Land, and three by the air force to West Spitsbergen and Hopen, in addition to routine flights from bases in Norway. The aim was to obtain synoptic weather data enabling forecasts on the influence of the polar front on European weather. Each of these parties or operations is described in detail, with data on personnel, itinerary, duration, objectives, equipment, on the meteorological and ice observations made, also other studies (in geology, etc.) carried out; evacuation or

surrender of the depots is noted. The development of two types of automatic weather stations is described and the limiting factors of their war-time operation indicated (p. 202-203, 224-25).

Geografiia zhivotnykh; dopushcheno Vsesoiuznym Komitetom po delam vysshel shkoly pri SNK SSSR v kachestve uchebnika dlia biologicheskikh i geografiicheskikh fakul'tetov gosudarstvennykh universitetov i institutov. Moskva, Gos. izd-vo "Sovetskai nauka", 1946. 453 p., illus., tables. Other authors: L. A. Zenkevich and I. A. Birshtein. **Title tr.:** Animal geography; authorized by the All-Union Committee in charge of higher schools of the Council of People's Commissars of the U. S. S. R. as a textbook for biology and geography faculties of the state universities and institutes.

**Contents:** General data; the fauna of the sea; the fauna of the continental waters; the fauna of the dry land. The arctic areas of the sea are treated in general (p. 95-155) and the Russian seas in particular (p. 155-78); arctic fresh-water fauna (p. 231-33); the land animals of the arctic region (p. 304-324); the arctic fauna of the U. S. S. R.: tundra and taiga areas (p. 343-60).

**Copied seen:** DLC.

**20743. BOBRINSKOI, NIKOLAI ALEKSEEVICH, 1890-**. Geografiia zhi-

votnykh; kurs zoogeografii dlia geograficheskikh fakul'tetov pedagogicheskikh institutov. Dopusheheno v kachestve ucheb. pasobiia dlia pedagog. in-tov. Moskva, Gos. uchebno-pedagog. izd-vo, 1951. 384 p. illus., ports., maps.

**Title tr.:** Animal geography; a course in zoogeography for geographical faculties of pedagogic institutes. Authorized as a teaching aid for pedagogic institutions.

**Contains** three parts: (1) general; (2) fauna of the world; (3) fauna of the U. S. S. R.; pt. 2-3, subdivided into (a) marine fauna, (b) continental fauna. In addition to scattered references throughout the text, the following chapters deal in part or exclusively with arctic fauna: zoogeographical areas of the world ocean (p. 100-118); Arctogean lands (p. 183-203); tundra belt (p. 220-31); taiga belt (p. 232-52); northern seas (p. 346-49).

This is a revised edition of a work by the author and others with the same title pub. 1946, 455 p.

**Copy seen:** DLC (both editions).

**20744. BOBRINSKOĬ NIKOLAI ALEKSEEVICH, 1890-** . Zhivotnyi mir i priroda SSSR. (Sredi prirody, no. 9). Moskva, Izd-vo Moskovskogo obshchestva ispytatelei prirody, 1949. 215 p., fold. map., illus., 32 illus., on 16 plates.

**Title tr.:** The animal world and nature in the U. S. S. R. (With nature, no. 9)

A popular book on the zoogeography of the U. S. S. R. Starting with life of the seashores, the author proceeds through the tundra, taiga, and subsequent regions till he reaches the southernmost outskirts of the country: the Crimea, Caucasus and Central Asia. Glossary of Latin names of animals is appended.

**Title tr.:** The clovers of the U.S.S.R.

**Contains** a critical revision of all known species of clover (*Trifolium*) of the flora of U.S.S.R., with a review of works on systematics of the genus, cytological investigation, phylogenetical scheme of clover classification, a key to the species, p. 196-204; a systematic survey of 65 species with synonymy, descriptions, data on agricultural importance and notes on geographic distribution; a systematic list of Russian clovers, p. 332. Includes five species (*T. lupinaster*, *T. repens*, *T. hybridum*, *T. fragiferum* and *T. pratense*) native to northern regions of the U.S.S.R. Bibliography (129 items). Summary in English.

**Copy seen:** MH-A.

**20747. BOCH, S. G.** Materialy k chetvertichnoi geologii Liapinskogo, Nizhnesosvinskogo i Kondinskogo kraia zapadnosibirskoi nizmennosti. (Akademiia nauk SSSR. Komissii po izucheniiu chetvertichnogo perioda. Trudy, 1937. t. 5, vyp. 1, p. 89-148, illus., 2 fold. sketch maps) **Title tr.:** Contribution to the Quaternary geology of the Lyapinskiy, Nizhnesosvinskiy and Kondinskiy regions of the western Siberian plain.

**Contains** description of the geography and Quaternary geology of an area lying between 59°39'-65°30' N. 61°-68° E., studied during 1929-33, largely along canoe routes of the Konda and Northern Sos'va River basins, left tributaries of the Ob'. Report on the river systems, structural, stratigraphic and glacial geology, geomorphology and geologic history of the area traversed. Bibliography (35 items). Summary in French.

**Copy seen:** DGS.

**20748. BOCH, S. G.** O nekotorykh tipakh deluvial'nykh otlozhenii Pripolarnogo Urala. (Moskovskoe obshchestvo ispytatelei prirody. Bülleten', 1939. Novaia seriia, t. 47, otdel geol. t. 17, vyp. 6, p. 48-61, illus.) **Title tr.:** On some types of diluvial deposits of the subarctic Urals.

"Ridge characteristics, glacier formation, permafrost distribution, and the relationship between diluvial deposits

and solifluction [in the area, 64°-65°30' N.] are discussed. Soil lamination and embedded humus levels were found under solifluction terraces. A relationship was established between soil-flow velocity and the presence of permafrost and snow cover. Meltwater from snow fields is considered the major factor activating solifluction."—SIPRE. Summary in English. **Copy seen:** DLC; MH-Z.

**20749. BOCH, S. G.** Stoianki v basel'nakh Severnol Sos'vy i Kondy. (Akademiia nauk SSSR. Komissiiia po izucheniiu chetvertichnogo perioda. Trudy, 1937. t. 5, vyp. 1, p. 149-65, illus., sketch map) **Title tr.:** Sites in the Northern Sos'va and Konda basins.

Contains report on archeological findings of the author during his geologic trips, 1929-33, in the area east of the Polar Urals, 59°39'-63° N. 61°-66° E. along the tributaries of the Ob' River. Description of caves, fireplaces, and settlement sites with artifacts from a culture presumed to be Gorodichi, probably dating from the beginning of the bronze age. Summary in German.

**20750. BOCK, RICHARD ERNST, 1899-**, and **W. SCHUMANN.** Katalog der Jahresmittel der magnetischen Elemente der Observatorien und Stationen, an denen eine Zeitlang erdmagnetische Beobachtungen stattfanden. Bd. I-IV. Berlin, Akad.-Verlag, 1948. 4? v. (Potsdam. Geophysikalisches Institut. Anhandlungen Nr. 8-11?) **Title tr.:** Catalog of annual means of magnetic elements from observatories and stations which have been making geomagnetic observations for some time, vol. I-IV.

Evidently projected in four volumes, of which only v. 1-2 have been located. Vol. 1 (no. 8) presents data from 61 localities north of 55° N., of which 45 lie within the boundaries of the arctic and subarctic areas covered by this Bibliography. The list of stations gives geographic coordinates and years for which observational data are available.

**File seen:** DLC (v. 1-2, i. e. no. 8-9 only)

**20751. BOCK, SIXTEN, 1884-1946.** *Epithetosoma* not a geophyrean but an indeterminate heteronemertine. (Bergen, Norway. Museum. Aarbok; Naturvidenskabelig raekke, 1919-20, pub. 1921, nr. 9, p. 1-5)

Contains a critical study of a specimen from the collection of the Norwegian

North Atlantic Expedition, described as a geophyrean, *Epithetosoma norvegicum*, by D. C. Danielssen and J. Koren in their paper *Fra den norske Nordhavsrejsning. Geophyreer*, 1880, (Arctic Bibliography No. 3655). The specimen is in a bad condition and the author identified it as a nemertine, probably a species of *Micrura*.

**20752. BOCK, SIXTEN, 1884-1946.** Studien über Polycladen. (Zoologiska bidrag från Uppsala, 1913. bd. 2, p. 31-343, illus., plates 3-10) **Title tr.:** Studies on Polyclada.

Contains a monographic treatment of marine flatworms of the order Polyclada from various seas, with an enumeration of over 120 species, including 23 new species and 10 new genera. Diagnoses, localities, geographic distribution are given along with data on morphology, anatomy and ecology; also notes on geographic distribution of Polyclada along the Scandinavian coast and in the Arctic (p. 311-18) and an index of the species and a bibliography (261 items). Includes some species native to northern waters of Europe and Asia.

**Copy seen:** MH-Z.

**20753. BOCK, SIXTEN, 1884-1946.** Zur Kenntnis von *Nectonema* und dessen systematischer Stellung. (Zoologiska bidrag från Uppsala, 1913. bd. 2, p. 1-30, illus., plates 1-2) **Title tr.:** A contribution to the knowledge of *Nectonema* and its systematic position.

Contains a discussion of the systematic position of the marine nematode genus *Nectonema*, with a list of three species, including a diagnosis of *N. svenskundi* n. sp. found on Aug. 27, 1908 in Dickson Bay, West Spitsbergen, during the Swedish Spitsbergen Expedition. The anatomy and histology of this species is studied, also its relationship to other groups of Nematoda. **Copy seen:** MH-Z.

**20754. BODNARSKIĬ, MITROFAN STEPANOVICH, 1870-**. Ocherki po istorii russkogo zemlevedeniia, I. Moskva, Izd-vo Akademii nauk SSSR, 1947. 290 p. maps (8 fold.). (Akademiia nauk SSSR. Nauchno-popul'arnaiia seriia) **Title tr.:** Essay on the history of Russian geography, I.

Contains a history of Russian geographical exploration and travel, with chapters on (1) the ancient period: 12-16th century; (2) the epoch of great

Russian geographical discoveries: second half of 16th to end of 17th century; (3) period of Peter the Great: end of 17th-first quarter of 18th century; (4) period after Peter, 1725-1800; (5) first half of 19th century. In view of the geographic position of Russia the travels and discoveries were to a great extent within the arctic and sub-arctic areas and their history offers a substantial part of arctic information. *Appendix* gives a chronological guide of events (p. 254-64); list of personal names (p. 265-73) and geographic names (p. 274-87). Bibliography (305 items).

**20760.** Number not used.

**20761. BÖCHER, TYGE WITTRÖCK, 1909-** . Contributions to the flora and plant geography of West Greenland II, the *Carex capita*-, the *Luzula multiflora*-, and the *Tortularia humilis*-complexes. Den botaniske ekspedition til Vest Grønland 1946. København, C. A. Reitzel, 1950. 39 p., 15 illus., 5 plates with descriptive letterpress. (Meddelelser om Grønland, bd. 147, no. 7)

In determining plants collected on the

Botanical Expedition to West Greenland in 1946, the author met various systematic and plant geographical problems. He treats three complexes of species involving such problems. Within all three there is a species with a narrow areal limited to the most continental part of West Greenland; one such species *Luzula groenlandica* is new to science; all three such species occur highly isolated; other isolated occurrences in the Søndre Strømfjord area are mentioned. The importance of these isolations to the theory of a large continental Glacial-Age refugium in this area is discussed—introd.

**Copy seen:** CaMAI.

**20762. BÖCHER, TYGE WITTRÖCK, 1909-** . Contributions to the flora and plant geography of West Greenland III, vascular plants collected or observed during the Botanical Expedition to West Greenland 1946. København, C. A. Reitzel, 1952. 85 p. illus. (incl. sketch maps). (Meddelelser om Grønland. bd. 147, no. 9).

Contains lists of several hundred species of plants from 20 localities mainly in the region of Søndre Strømfjord near 67° N. on the west coast of Greenland. A detailed account is given of the occurrence, systematics and biology of the flora of the fiord region, and this is compared with other local floras of Greenland. Bibliography (67 items).

**Copy seen:** DGS.

**20763. BÖCHER, TYGE WITTRÖCK, 1909-** . Cytological and embryological studies in the amphipomictic *Arabis holboellii* complex. (Danske videnskabelnes selskab. Biologiske skrifter, 1951. Bd. 6, nr. 7, p. 1-59, illus., diags., maps, tables).

Contains a cytological examination of the varieties *typica* and *retrofracta* from Greenland and from Alaska, with a special study of meiotix behavior, pollen development, embryology and seed-sterility. This highly polymorphic rock-cress was found to have a basic haploid chromosome number of 7, with diploid races occurring in America and Greenland, triploid races in Greenland, hexaploid races in America. Western North America is the present center of variation of this species and probably the center of its origin. Its present discontinuous distribution suggests that it is a survivor of North American glaciation. Bibliography (43 items).

**Copy seen:** DA.

**20764. BÖCHER, TYGE WITTRÖCK, 1909-** . Cytological studies in the genus *Ranunculus*. København, H. Hagerup, 1938. 33 p., illus. (Dansk botanisk arkiv. bd. 9, nr. 4).

Contains description of materials and methods, cytological observations, castration and hybridization experiments, germination experiments with pollen grains, and a bibliography (47 items); material includes *Ranunculus auricomus* and its variety *glabrata* from East Greenland and *R. affinis* with var. *willanderi* native to East Greenland, Svalbard and Baffin Island.

Contains a critical revision of marine and some fresh-water (in Scandinavia) crustaceans of arctic and boreal regions, with a systematic list of about 250 species, including diagnoses of many new species, brief descriptions of other species, synonymy, critical notes and data on distribution. At least 70 species are native to Greenland and Barents Sea, Svalbard waters and northern provinces of Scandinavia. **Copy seen:** DLC; MH-Z.

**20770. BOECK, CHR.** *Tubularia regalis*, en ny art fra Belsund paa Spitsbergen. (Norske videnskaps-akademi, Oslo. Forhandling, 1859, pub. 1860, p. 114-17, plate 3) **Title tr.:** *Tubularia regalis*, a new species from Bellsund, Spitsbergen.

Contains a description of *Tubularia regalis* n. sp., a hydroid found in Bellsund (77°40' N. 14° E.) West Spitsbergen.

**Copy seen:** DLC; MH-Z.

**20771. BÖCKER, CARL CHRISTIAN, 1786-1841.** Om skogars skötsel i Norden, udelleen julkaissut Suomen Metsätieteellinen Seura, johdannolla varustanut E. A. Martin Hagfors. Helsinki, 1929. 37, iv, 88 p., plate. (Silva fennica:13) **Title tr.:** Silviculture in the North, newly edited by the Forestry Society of Finland, with introduction by E. A. Martin Hagfors.

Introduction by Hagfors in Finnish and

English (p. 3-37) gives historical outline of forestry developments in Sweden and Finland, biographical sketch of the Finnish politician and economist Böcker, his pioneer and classic work (with title as above) published in Swedish in 1829, of which the first part on forest economics is reprinted here (iv, 88 p.). Hagfors gives a chapter-by-chapter analysis of Böcker's study, relating it to knowledge and practices of that and later times. Böcker dealt with the importance of forests in national economy; foundation of forest economics; state forest policy; main lines for the future (a detailed program in education, conservation and control in forestry). **Copy seen:** DLC.

**20772. BØGVAD, RICHARD, 1897-** . Grønland som mineralproducerende land. (In: Birket-Smith, K., and others. Grønlands bogen, 1950. v. 2, p. 95-120, illus.) **Title tr.:** Greenland's mineral resources.

Contains review of exploration for minerals of economic or more than passing interest, beginning with the time of Hans Egede; brief history of copper, cryolite, coal and marble mining; exploration and prospecting for nepheline syenite and iron ores, mainly magnetite; remarks on uranium in Greenland. Bibliography (7 items). The author's *Nepheline syenite and iron ore deposits in Greenland*, 1950, treats certain parts of this paper in English and in somewhat more detail.

**20780. BOGDANOV, F. M.** K voprosu degradatsii vechnoi merzloty. (Sovetskaya geologiya, 1934. 1: no. 3, p. 232-234) *Title tr.:* On the degradation of the permafrost.

"Geological investigations were conducted in the area of Podkamennaya and Nizhnaya Tunguska to determine the extent of permafrost degradation which had been observed since 1892. The appearance of thaw lakes and sinks in increasing numbers suggested the subsidence of the ground following the thawing of permafrost. Drillings extending 80 m. below the ground surface at the mouth of P. Tunguska indicated the absence of permafrost. Inspections of mineshafts, water wells, and other types of ground works confirmed the findings. The study of coal deposits in this region showed the existence of permafrost during the latter part of the 19th century."—SIPRE.

Trudy po lingvistike, t. 6) **Title tr.:** Luoravetlan-Russian (Chukchi-Russian) dictionary. Prepared for publication by G. Mel'nikov, G. Korsakov and T. Bel'sbakh, under the editorship of S. N. Stebnitskii.

Prepared on the basis of data collected by Bogoraz in the Kolyma region 1895-97 when (a deportee) with the Sibirĭakov Yakut Expedition, and on Chukotsk Peninsula 1901-02 attached to the Jesup North Pacific Expedition. Introduction outlines the grammar and essential peculiarities of the language. Then follows Chukchi dictionary with Russian equivalents, definitions, etc. **Copy seen:** DLC.

**20788. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936.** Materialy po

ĭazyku aziatskikh ėskimosov. Podgotovili k pechatĭ G. A. Menovshchikov i E. S. Rubĭsova. S prilozheniem tablits skloneniĭa imen i sprĭazheniĭa glagolov v sovremennom ĭazyke aziatskikh ėskimosov, sostavlennykh G. A. Menovshchikovym. Pod redaktsiei I. S. Vdovina. Leningrad, Gosudarstvennoe uchebno-pedagogicheskoe izd-vo ministerstva prosveshcheniĭa RSFSR, Leningradskoe otdelenie, 1949. 255 p. **Title tr.:** Materials on the language of the Asiatic Eskimos. Prepared for publication by G. A. Menovshchikov and E. S. Rubĭsova. With a supplement of declension tables and conjugation of verbs in the modern language of the Asiatic Eskimos compiled by G. A. Menovshchikov. Edited by I. S. Vdovin.

*Contains*—in this publication of materials prepared by Bogoraz in 1901 on the basis of his work during the Sibirĭakov Yakut Expedition 1894-96 and the Jesup North Pacific Expedition—an introductory section (p. 3-24) on the life and linguistic work of Bogoraz, the Academy of Sciences' early interest in the language of the Eskimos and other primitive people, etc. The monograph includes: the parts of speech (p. 25-105); exercises printed in Latin characters with Russian translations (p. 106-178); Eskimo-Russian dictionary (p. 179-211); list of suffixes having the meaning of words (with examples). Bibliography (27 works by Bogoraz, 28 works on the Asiatic Eskimos). **Copy seen:** DLC.

**20789. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936.** Neue Daten über die Ethnographie der kleinen Völkernschaften des Nordens. (Anthropos, Ephemeris, 1929. Bd. 24, p. 517-21) **Title tr.:** New data on the ethnography of the small peoples of the North.

*Contains* several short notices on material culture of the Yeniseians, Ostyak-Samoyeds, Lamuts, etc.: animal-husbandry, means of transportation, etc.

**Copy seen:** DLC; InU.

**20790. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936.** Novye dannye po étnografii malykh narodnostei Severa. (Sovetskaiĭ Aziĭa, 1928. god 4, no. 3, p. 49-53) **Title tr.:** New data on ethnography of the small nationalities of the North.

*Contains* notes on the Yeniseians, Ostyak-Samoyeds, Lamuts, Chukchis, and Tungus, gathered from student-

natives of those peoples; deals mostly with the reindeer breeding and use of dogs as herders; includes details on the Tungus sledge (*narta*).

**Copy seen:** DLC.

**20791. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936.** Osnovnye tipy fol'klora severnoi Evrazii i severnoi Ameriki. (Sovetskii fol'klor, 1936. v. 4-5, p. 29-50) **Title tr.:** Basic types of folklore in northern Eurasia and North America.

*Contains an analysis of the ideology as deduced from myths and tales of the following ethnic groups: (1) the Koryaks and Kamchadals, (2) Yukaghirs and Chuvantzy, (3) Chukchis, (4) Asiatic Eskimos, and (5) American Eskimos. The myth about an animal which died and came to life again is typical for the entire area. In Koryak-Kamchadalian folklore, the myths are centered around the raven Kutkha, his wife and children; the creator of the world also is a raven and these myths on the whole are of a light and merry character. The Eskimo myths, on the contrary, are sombre and mirthless. The chief figure of Eskimo folklore, Sedna, woman of the sea and mistress of life, is hostile to men and sends them all kinds of calamities: she is of human origin, but lives at the bottom of the sea.*

**20792. BOGORAZ, VLADIMIR GERMANOVICH, 1860-1936.** Severnoe olenevodstvo po dannym khoz'iaistvennoi perepisi 1926-1927 gg.; opyt kriticheskogo razbora. (Sovetskaiâ étnografiâ, 1932. no. 4, p. 26-62) **Title tr.:** Northern reindeer breeding, from a critical selection of the results of the economic survey of 1926-27.

*Contains a critical evaluation of the reindeer data in the latest census: its statements of the numbers, increase and decline of the animal among the nomadic Chukchis, Koryaks, Samoyeds, Tungus, Zyryans, and Lapps. A great price difference in different places is noted for reindeer and reindeer hide. Among the Zyryans 70 per cent of the population are reindeer breeders; among the Samoyeds 58 per cent; among the Koryaks and Tungus only 9 per cent and 8.5 per cent respectively. The reindeer population of the U.S.S.R. is given in this official census as 1,773,993; it is actually, the author states, about three million head.*

**20827. BONSHTEDT, ÈL'ZA MAKSI-MOVNA.** Titanit (sfen). Leningrad, Izd-vo Akademii nauk SSSR, 1934. 63 p. diagr., tables, map. *Title tr.:* Titanite (sphene).

Contains a general part (p. 5-23) with historical, crystallographic, physical, chemical and other data on titanite, its genesis and modifications. The special part (p. 23-58) deals with the occurrence of titanite in the Soviet Union including the Kola-Khibiny tundra (p. 26-31) and Karelia (p. 31-33). Bibliography (over 100 items).

*Copy seen:* DLC.

**20828. BOONE, LALLA R.** A prediction regarding the Humboldt Current.

(Science, Dec. 1949. v. 110, no. 2867, p. 642-44)

Contains a discussion of factors assumed to be responsible for abnormalities in the Humboldt Current (a cold current flowing north, among the Peruvian and Chilean coasts). Tides coming down from the Arctic, and conditions causing the drift of icebergs to very low northern latitudes (43° N.) coupled with similar factors in the Antarctic may account for great anomalies in this current. The author claims that 3 years after abnormal North Atlantic iceberg conditions, their supposed effect is felt in the Humboldt Current. Bibliography (41 items). Criticism by F. M. Soule in *Arctic ice drift and the Humboldt Current*, 1950, q. v.

*Copy seen:* DA.

**20829. BOONE AND CROCKETT CLUB.** Committee on Records of North American Big Game. Records of North American big game; a book of the Boone and Crockett Club, compiled and edited by the Committee on Records of North American Big Game. New York, Scribner, 1952. xiii, 174 p., illus.

Contains authentic records of North American big mammals including arctic game such as caribou, moose, muskox, Alaskan brown and grizzly bears, polar bear, walrus, etc. In addition to data on the measurements of the recorded animals, information is supplied on the date, locality and by whom the specimens were killed and owned. Special sections deal with the scoring system; objectives and condition of big game competition, care of trophies, etc.

Sbornik trudov, 1937. t. 4, p. 135-89, illus., text map.) **Title tr.:** The geographical distribution of *Bryocamptus* (*Arcticocamptus*) *arcticus* Lill. on the grounds of its ecology.

Contains a study of the geographic distribution of a fresh-water crustacean, *Bryocamptus arcticus*, known previously from Greenland, northern Scandinavia and northern European Russia and then found in 1924 in the peat bogs near the Kossino Biological Station (Moscow government) where an extensive investigation was carried out in 1924-25. The influence of physico-chemical, geographical, ecological and biocenotic factors on the distribution of this species, considered to be of eastern arctic origin and an immigrant of post-glacial period, is studied in detail. Bibliography (65 items). Summary in English. **Copy seen:** MH-Z.

**20846. BOSTOCK, HUGH SAMUEL, 1901-** . Geology of northwest Shakhwak valley, Yukon Territory. Ottawa, 1952. v, 54 p. incl. 4 plates. front., 2 col., fold. maps, table. (Canada. Geological Survey. Memoir 267)

Contains a physiographic and geologic description of the region which extends northwestward from 60° N. 138° W. to 62°40' N. 141° W. The map area lies across the boundary between the Yukon Plateau and the St. Elias Mts. Shakhwak valley, a great fault zone which separates Paleozoic and older metamorphic rocks to the northeast from Cretaceous-Tertiary formations to the southwest, is traversed by the Alaska Highway and contains Kluane Lake. Intrusive rocks underlie the northeast section; Paleozoic, Mesozoic and Tertiary volcanic rocks are widespread; a blanket of Recent volcanic ash occurs throughout the whole region, which also shows evidence of widespread glaciation, probably late Wisconsin in age. Bibliography (28 items). Geologic map 1012A (scale 1:253,440) and map of the upper Yukon River basin showing distribution and thickness of Recent volcanic ash deposit, are included.

**20857. BOYÉ, MARC.** Glacière et périglaciaire de l'Atâ Sund nord-oriental Groenland. Expéditions polaires françaises, Missions Paul-Émile Victor. 1. Paris, Hermann, 1950. 176 p. 26 fig. in text, 37 plates, map (1 fold.) (Actualités scientifiques et industrielles 1111) **Title tr.:** Glaciation and periglacial phenomena of northeastern Atâ Sound, Greenland. French Polar Expeditions under Paul-Émile Victor, 1.

Contains the results of research on the Ege region 69°46'-69°42' N. approx. 50°15' W., south of Eqip Sermia glacier, with reference to the surface features produced by ancient inland ice and periglacial climate working on the gneiss plateau and schist-gneiss hinterland. "Ice erosion, winds, and solifluction are assumed to be responsible for the morphology of Greenland's non-glaciated coast. It has been assumed that inland ice erosion had a predominantly moving action, which does not explain the deeply crevassed topography. The periglacial deep digging hypothesis explains ice erosion as having occurred in two phases. Deep cracks developed in the surface during the periglacial phase when the 0° C isotherm extended to depths between 150-300 m. Surface rubble was carried away and turned into a till during the succeeding glacial overflow period. This theory indicates the importance of periglacial factors in erosion."—SIPRE. Includes morphological map of the area and bibliography (52 items).

**20871. BRANDTNER, ERWIN.** Beiträge zur Statistik polarer Luftdruckwellen. (Deutscher Wetterdienst in der US-Zone, *Bad Kissingen*. Berichte, 1950. Nr. 12, p. 65-71, tables, diagrs.) **Title tr.:** Contributions to the statistics on polar atmospheric pressure waves.

Using pressure wave data for Svalbard, 1912-13 to 1947-48, the author calculated a periodogram of twenty-nine waves between 80 and 8 days, for each of the 36 winter seasons. The 72-day wave while relatively frequent was not of dominating amplitude; its high persistence made it appear as an oscillation of the annual wave. The 30-day wave seldom showed dominating amplitude, but because of its relatively large phase constant, it reached a high persistence in the collective average. The 20 to 24-day and 11.3-day waves appeared independent of the calendar but showed a large number of dominating amplitudes in the frequency spectrum.—From author's abstract. Bibliography (13 items). See also *Meteorological abstracts and bibliography*, Sept. 1950, v. 1, no. 9, p. 580.

Account of the author's trip with T. H. Manning, Sept.-Dec. 1932, on foot from Bodø on the northern Norwegian coast, by Kvikkjokk, Gällivare, Karesuando and Karasjok in northern Sweden, to Inari in northern Finland and across the Russian frontier; their arrest (by Russians) and return to England. Describes vividly the country traversed, travel and camping conditions, conversations with local people, etc. **Copy seen:** DLC.

**20874. BRAZHNİKOV, VL. K.** Fisheries of Russian Pacific coast, I-II. (Russian Far East; economic monthly (Tokyo) Oct. 1920-Jan. 1921. no. 1, p. 19-32; no. 2, p. 29-43, illus., fold. map, 2 fold. diagrs.) Issued also in Russian with title: *Rybnaiâ promyshlennost' na Russkom Dal'nem Vostoke, I-II* in the first (Russian) section of the magazine, no. 1, p. 24-42, no. 2, p. 35-51.

Outline (in pt. 1) of the physical and economic conditions of the coast, and (pt. 2) the fishery resources of waters from Vladivostok (42° N.) to the arctic sea, especially along the Kamchatka coasts. Comment on climatic, especially ice conditions which hamper loading and shipping; list of food fishes occurring, and discussion of herring, flatfish, and (in detail) salmon. Pt. 3, evolution of the fisheries and their present state, published in no. 3 of this magazine, has not been located. **Copy seen:** DGS.

**20875. BREEV, K. A.** О поведении кровососущих двукрылых и оводов при нападении их на северного оленя и ответных реакциях оленя, I. Поведение кровососущих двукрылых и оводов при нападении их на северного оленя. (Parazitologicheskii sbornik, 1950. t. 12, p. 167-98, illus., diagrs., tables) **Title tr.:** On the behavior of blood-

sucking Diptera and gadflies during their attack on reindeer and the defensive reaction of the reindeer, I. Behavior of blood-sucking Diptera and gadflies during their attack on reindeer.

Contains a report of an investigation of 33 species of insects during their attacks and feeding on reindeer. Direct observations as well as experiments with dummies, models, etc., were applied under various conditions. The behavior of different parasites; their preferences for certain body-regions, senses of orientation, damage, etc., are elucidated and preventive measures recommended. Bibliography (24 items).

**Copy seen:** DLC.

**20876. BREEV, K. A.** O povedenii krovososushechikh dvukrylykh i ovodov pri napadenii ikh na severnogo olenâ i otvetykh reaktsiâkh olenel II. Stadnost' u severnogo olenâ kak faktor zashchity ot napadeniâ krovososov i ovodov. (Parazitologicheskii sbornik, 1951. v. 13, p. 343-54, tables) **Title tr.:** On the behavior of blood-sucking diptera and gadflies during their attacks on reindeer and the defensive reactions of the reindeer, II. Gregariousness of the reindeer as a factor against attacks of blood-suckers and gadflies.

Contains results of a study of the effect herding has on the frequency of bites from the various flies. When the herd is small and the insects numerous, no effect is observed and the individuals resort to the usual defense of running or plunging into water. In large herds, most animals on the periphery are attacked to some degree, the rest being but little molested since there are not many flies in proportion to the number of the animals. This may be a factor in causing gregariousness during the summer. Bibliography (31 items).

**20877. BREHM, ALFRED EDMUND, 1829-1884.** Auf Forscherfahrt in Nord und Süd; Erlebnisse bei Mensch und Tier. Hrsg. von Carl W. Neumann. Stuttgart, K. Thienemann [1925] 203 p., col. illus. **Title tr.:** From travels north and south; adventures among men and animals. Edited by Carl W. Neumann.

Sketches from the experiences of a well-known 19th-century naturalist in far-away places. These include (in chap. 1) observations of bird rocks of the far North, made during a trip in 1860 through Swedish Lapland to North Cape, Nor-

way; chap. 2, the life of the eider duck; chap. 19, the tundra and its natural history; chap. 20, a sojourn among the Ostyaks. Chap. 19-20 are based on a journey in 1876 through the Siberian steppes and tundra. **Copy seen:** DLC.

**20878. BREITFUS, LEONID L'VOVICH, 1864-1950.** Biogeographischer Beitrag zur Kenntnis der Spongienfauna der Arktis. (Gesellschaft naturforschender Freunde zu Berlin. Sitzungsberichte, 1929, pub. 1930. p. 274-82, incl. 8 p. of tables) **Title tr.:** Contribution to knowledge of the distribution of arctic sponges.

Tabular presentation of sponges collected in 1906 aboard the *Andrei Pervozvannyi* in Barents and Kara Seas, with location, depth and type of bottom of each station and the temperature and salinity of the ocean water.

**Copy seen:** DSI-M.

**20879. BREITFUS, LEONID L'VOVICH, 1864-1950.** Die Erforschung der Polargebiete in den Jahren 1932 bis 1947. Gotha, Justus Perthes, 1950. xvi, 320 p. (Geographisches Jahrbuch, Bd. 60) **Title tr.:** Exploration of the polar regions in the years 1932 to 1947.

Contains bibliography of 4,518 items covering the arctic and the antarctic regions. The arctic bibliography (p. 42-247) is presented in regional chapters: the Arctic as a whole, the Eurasian region generally, the West European region (Scandinavia, Svalbard, Jan Mayen), the East European region (of U.S.S.R. including Franz-Josef Land, Novaya Zemlya and other islands), the North Asiatic region (Siberia and the far East), the North American region (Alaska, Canada, and Greenland). Each regional chapter deals with history, expeditions, geology and paleontology, climate and geophysics, oceanography, ethnography, zoology, biology, and botany. Special topics and problems are dealt with, e. g. effects of cold and results of treatment (p. 31-32), reindeer breeding (p. 87-91), a necrology of polar investigators (p. 16-21), polar institutions, Second International Polar Year 1932-33, etc. A total of 638 expeditions is stated to have been carried out to the Arctic in the period 1932-47 (289 by the Russians). Each chapter or section includes a brief survey or review statement by Breitfus of the literature listed, but papers, etc., themselves are not abstracted or summarized individu-

ally. Titles are given in the vernacular except Russian (authors and titles) which are Germanized or Anglicized. Index of authors is appended p. 299-319.

**20885. BREMNER, P. C.** Permafrost drilling at Resolute Bay. (Arctic circular, Jan. 1952. v. 5, no. 1, p. 10-11)

*Progress report* on a geothermal study of permafrost by the Dominion Observatory cooperating with the Canadian Meteorological Service and the U. S. Weather Bureau at Resolute Bay (74°42' N. 94°34' W.) on Cornwallis Island. "A diamond drill was used to bore a hole 1.5 in. in diameter to accommodate a thermometer. A temperature of 8° F was determined at a depth of 100 ft. at the end of the summer of 1950. A large fire-tube boiler supplemented a gravity-feed boiler in heating water to near the boiling point to prevent the drill rods from freezing in the hole. A depth of 450 ft. was reached at the end of the summer of 1951. Rock samples were obtained during the drilling process."—SIPRE. **Copy seen:** CaMAI; DLC.

**20886. BREMNER, P. C.** The seismic observatory at Resolute Bay. (Arctic circular, Jan. 1952. v. 5, no. 1, p. 8-9)

*Contains* report of the preliminary survey and, in 1950, establishment of the station on bed rock about 1000 ft. south of the meteorological station at Resolute on Cornwallis Island; details on the building and apparatus; the records and peculiar conditions of the station: "while there has been little indication that the Eastern Arctic Islands are seismic, few days pass that an earthquake is not recorded . . . earth tremors from Alaska, the Aleutian Islands and occasionally from northern Siberia . . . the time of arrival of the first shock wave . . . is radioed to Ottawa then to Washington."

Author notes also opportunity afforded by this station for study of the geological structure beneath the Arctic Ocean, Bering Sea and North America, and for "solving the mystery of microseisms."

*Copy seen:* DLC.

**20887. BREMNER, P. C.** Seismic observatory for the Arctic. (Arctic circular, Feb.-Mar 1950. v. 3, p. 15-17)

Note announcing the erection of a seismological station at Resolute Bay on Cornwallis Island, in the summer of 1950, by the Dominion Observatory of Canada; with remarks on distance separating detectors and recorders, the special plywood building buried in gravel to prevent wind vibration, etc.

*Contains* description of the general geology, followed by account of the location, size, grade, and mineralogy of the almandite garnet deposits formed in the schists which lie on the west margin of the Coast Range batholith a few miles north of Wrangell, Alaska.

*Copy seen:* DGS.

**20892. BREVIG, TOLLEF LARSON, 1857-1935.** Apaurak in Alaska; social pioneering among the Eskimos, translated and compiled from the records of the Reverend T. L. Brevig, pioneer missionary to the Eskimos of Alaska, from 1894 to 1917, by Dr. Walter Johnshoy. Philadelphia, Dorrance & Co., [1944]. xvii, 19-325 p., front., 71 plates (incl. ports., facsim.) on 36 leaves.

A reminiscent account (written about 1929 with details drawn from his official day-book) of the author's (Apaurak's) life and work in northwestern Alaska whither he was sent by the U. S. government as Norwegian-American Lutheran pastor to Lapp herdsmen brought to Alaska to train Eskimos in reindeer husbandry. He had charge of the mission and reindeer station at Port Clarence and Teller, 1894-1908, 1913-17, was also postmaster of Teller and government commissioner north of Nome. His chronicle mainly recounts in simple often anecdotal style, the customs and attitudes of the Eskimos during a period when their traditional way of life was being fundamentally changed by association with the white man. It includes however, passing remarks, occasionally contentious, on white men and their activities, development of his own mission's work, epidemics, the gold rush, Captain Jarvis' overland expedition in 1898 for the relief of whalers at Point Barrow, territorial government affairs, details of reindeer management and the sale of the reindeer to the Lomen Co. in 1917, etc. The author's 72 illustra-

tions are mainly from photographs of natives, reindeer and mission.

Eighty-four photographs, result of the author's sojourn among the Reindeer Lapps of Jokkmokk, Swedish Lappland, in 1942; with introduction and descriptive notes translated by William Cameron and Karin Wander. The illustrations show the year-round activities, homes and natural surroundings of these semi-nomadic people, particularly details of reindeer herding, social customs and costumes. Each illustration is accompanied by an informative note.

**20895. BRIER, G. W.** Northern Hemisphere surface pressure and climatic fluctuations and vegetation growth in northern Finland. (Nature, May 1948. v. 161, no. 4097, p. 730-31, diags.)

Referring to an article by I. Hustich "Climatic trends and vegetation growth in Finland 1890-1939" (*Arctic Bibliography* No. 7589), Brier draws attention to his recent note on the considerable decrease of total air mass over the Northern Hemisphere in this period (1899-1939). This indicates that there was a tendency for maximum tree growth in northern Finland during the years of low average pressure over the Northern Hemisphere. It is suggested that in northern latitudes, low mean pressure is associated with high mean temperature. During the period under consideration summer temperatures increased in northern Finland and were responsible for increased tree growth. Bibliography (4 items).

berechnung auf der Deutschen Grönlandexpedition A. Wegener; Oberflächenform des Inlandeises und des Felsuntergrundes. (Neues Jahrbuch für Mineralogie, Geologie und Palaeontologie, 1951. Monatshefte [no. 2, Feb.], p. 53-55) **Title tr.:** Barometric height calculation in A. Wegener's German Greenland Expedition; surface form of the inland ice and of the rock bottom.

"Firn temperatures varying from -28.5° to -19° C. at different locations were obtained from annual temperature variation data. A dependence of the firn temperatures on the altitude only and not on the distance from the ice margins is indicated. Seismic reflexion measurements yielded a firn thickness of 350 m. at the center of the icecap. A firn temperature of -18° C. at a depth of 150 m. was determined from the temperature dependency of the elastic wave velocities in ice. The temperature distribution observed in the inland ice above the melting layer is attributed exclusively to internal heat sources such as friction. The elastic constants and the plasticity of ice showed a dependency on the temperature."—SIPRE.

**20922. BROCKAMP, BERNHARD, 1902- .** Nachtrag zu den wissenschaftlichen Ergebnissen der Deutschen Grönlandexpedition Alfred Wegener. (Neues Jahrbuch für Mineralogie, Geologie und Paläontologie. Abhandlungen, 1951. no. 93, p. 177-232, incl. tables, graphs, maps, diagrs.) **Title tr.:** Supplement to the

scientific results of the German Greenland Expedition Alfred Wegener.

"Atmospheric pressure and temperature values obtained between the coast and center of the icecap were used to calculate barometric altitude. The altitude of the center was found to be 3033 m. The firm temperatures are shown to depend only on the altitude and not on the distance from the margin. A temperature decrease of approximately 0.8/degree between 65° and 75° N. lat. is indicated. Reflexion measurements show the firm thickness to vary from approximately 50 m. at the 42 km. mark to 350 m. at the center. The ice temperature at a depth of 150 m. was calculated to be -18° C. using the velocities of elastic waves in glacier ice. The elastic constants and the plasticity of ice show a dependency on the temperature. The temperature distribution observed above the melting layer is attributed exclusively to internal thermal sources (friction)." — SIPRE. Bibliography (53 items).

"The relationship between the location of inland ice centers and the geothermal conditions of the bedrock is examined geophysically. Evidence was obtained from observation data of thermal conditions in inland ice in Greenland. Results indicate that the ice thickness depends on the magnitude of the thermal flow from below the bedrock. Areas with small thermal flow and large values of geothermal depths, such as old massifs, favor the accumulation of inland ice." — SIPRE.

**20924. BRODSKIĬ, K. A.** Veslonogie raskhi Calanoida Dal'nevostochnykh morei SSSR i pol'arnogo basseina. Moskva-Leningrad, Izd-vo Akad. nauk SSSR, 1950. 441 p. front., illus. (306 fig.) (In: Akademiia nauk SSSR. Zoologicheskii institut. Opredeliteli po faune SSSR, no. 35) **Title tr.:** Calanoida of the Far Eastern seas of the U.S.S.R. and the arctic seas.

**Contains** (in the general part) a systematic index of the species, characteristics of Copepoda, data on morphology,

anatomy, biology, vertical distribution and migration, geographic distribution, the rôle of Calanoida in the sea and their economic importance, classification and phylogeny, techniques of catching and preparation of specimens for study, region of the work (see fig. 17, p. 70), bibliography (124 items), p. 71-75. In the systematic part (p. 78-441) are keys for the determination of 22 marine families, genera, and species of the crustacean suborder Calanoida, and enumeration of all species (with descriptions of 70 new ones) native to arctic seas from Novaya Zemlya to the Bering Strait, Bering Sea, Okhotsk Sea, Aleutian waters and Gulf of Alaska, with descriptive notes, synonymy, dimensions, color and data on geographic distribution, ecology and economic importance; index of zoological names, p. 435-41.

**20925. BROKAW, RADFORD, and K. E. PENROD.** Bromsulphalein removal rates during hypothermia in the dog. (American journal of physiology, Nov. 1949. v. 159, p. 365-68)

**Contains** a report on dogs injected with bromsulphalein and made hypothermic down to a rectal temperature of 35° and 30° C. Both cases showed a marked retention and a slowed removal rate of the dye, the 30° C. group exhibiting greater retention and slower removal. Decreased cellular activity and/or reduced hepatic blood flow may be responsible for the retarded removal rate. Bibliography (9 items).

Description of the geologic structure and relief of the new iron ore region on the Labrador-Quebec boundary (about 55° N. 67° W.), its exploration, prospecting and claims, and the future plans for its development. **Copy seen:** DLC.

**20947. BROWN, ANTHONY WILLIAM ALDRIDGE, 1911-** , and others. Control of adult mosquitoes and black flies by DDT sprays applied from aircraft. (Mosquito news, June 1951. v. 11, no. 2, p. 75-84, illus., tables, map, diagr.) Other authors: R. P. Thomson, C. R. Twinn and L. K. Cutkomp.

Contains a report on a large-scale experiment carried out (by the Canadian Dept. of Agriculture in cooperation with the Air Force on behalf of the Defence Research Board) on an area of 18.7 square miles at Goose Bay, Labrador, in midsummer of 1950. The aim was to ascertain the effect of a single aerial spraying on adult mosquitoes, before they attain maximal numbers. The effect on adult black flies was also observed. Data on technique of application, location of the area (53°22' N. 60°08' W.), etc., are also included.

**20950. BROWN, ELLEN, and E. M. LANDIS.** Effect of local cooling on fluid movement, effective osmotic pressure and capillary permeability in frog's mesentery. (American journal of physiology, May 1947. v. 149, p. 302-315, 3 fig.)

Contains a report on an investigation which demonstrated that no capillary injury nor leakage of protein appeared until after the tissue has been frozen; that a capillary stasis developed as soon as blood flow commenced after thawing; that local reduction of tissue temperature to between +2° and -2° C. decreased the filtration constant of the capillary wall by 73 percent and increased the effective osmotic pressure within the capillaries by at least 31 percent. Bibliography (33 items). **Copy seen:** DLC.

**20951. BROWN, ELLEN, and others.** The effect of local cooling on the filtration and absorption of fluid in the human forearm. (Journal of clinical investigation, Sept. 1947. v. 26, p. 1031-42, 4 fig.) Other authors: C. S. Wise and E. O. Wheeler.

Contains an account of investigations made with the pressure plethysmograph, on the changes in volume of extravascular fluid in the forearm during exposure to a temperature range of 44.5° to 4.5° C. Moderate cooling was found to increase the extravascular volume of the forearm even when venous pressure was normal; decreased the rate of filtration produced by a given increase of venous pressure; and, decreased the rate at which extravascular fluid was reabsorbed. (Bibliography (17 items)). **Copy seen:** DLC.

**20952. BROWN, I. C.** Circular structures in the arctic islands. (American journal of science, Nov. 1951. v. 249, p. 785-94, illus., incl. map, 4 plates)

Tentative conclusions concerning the origin of peculiar circular forms noticed on Royal Canadian Air Force air photographs of Melville and Ellef Ringnes Islands, point to intrusions of igneous rock in the form of ring dykes and stocks or laccoliths into flat-lying sedimentary strata. **Copy seen:** DGS; DSI-M.

**20953. BROWN, I. C.** Preliminary map Christie Bay, Northwest Territories. (Descriptive notes). Ottawa, 1950. p. 1, 8 numb. 1, fold. map. (Canada. Geological Survey. Paper 50-21)

Notes on the physical features, the Yellowknife and Great Slave sedimentary and volcanic rock groups and the Et-then sedimentary rocks, also on the possible mineral deposits of the area 62°-63° N. 110°-112° W. at the eastern end of Great Slave Lake. Preliminary map 50-21A (scale 1 inch: 2 miles) includes McLeod and Christie Bays, Stark, McDonald, and other lakes. **Copy seen:** DGS.

**20954. BROWN, I. C.** Preliminary map Reliance, Northwest Territories. (Descriptive notes). Ottawa, 1950. p. 1, 8 numb. 1. fold. map. (Canada. Geological Survey. Paper 50-15)

Notes on the physical features, general and economic geology of the area 62°-63° N. 108°-110° W., east of the eastern arm of Great Slave Lake. It is characterized by two major unconformities which divide the formations into three main groups: the Yellowknife, Great Slave and Et-then groups, and by the Monacho group of sedimentary rocks. Preliminary map 50-15A, scale 1 inch: 2 miles. **Copy seen:** DGS.

**20955. BROWN, MALCOLM, 1916-**, and others. Parasitic infections in the Eskimos at Igloodik, N. W. T. (Canadian journal of public health, Dec. 1950. v. 41, no. 12, p. 508-512, tables)

Other authors: J. E. Green, T. J. Boag and E. Kuitunen-Ekbaum.

Contains a report of an examination of 100 Eskimos, made in August 1949 by the Queens University Arctic Expedition with the support of the Canadian Dept. of National Health and Welfare, and Defence Research Board. A high incidence of infection with *Enterobius vermicularis* was found in mature persons, with none in children below the age of five.

In about 30 percent of cases, ova of *Diphyllotritium* species were found. *Entamoeba coli* was found in 8 specimens, out of 97 subjects examined. Data on several less frequent parasites, as well as on lice and scabies incidence, are included. Bibliography (3 items).

(incl. 15 maps) 8 plates, 13 numb. double maps. (Bibliothèque géographique) **Title tr.:** Alaska geography, exploration, geology, mineralogy, fauna, peoples, flora, natural resources.

Chapters on (1) physical geography of regions and features, including glaciers, volcanoes, etc., p. 23-114; (2) history of exploration, p. 115-27; (3) geology

(general and regional) and geomorphology, p. 128-82; (4) life zones including tundra, p. 183-92; (5) fauna, a distributional study of principal mammals and birds, p. 193-217; (6) tribes and cultures of Indians and Eskimos, p. 218-87; (7) theories and schools of thought on original settlement, migration routes, etc., of the aborigines, p. 288-311; (8) plants in the forest zone, forest trees, and reservations, p. 312-25; (9) mineral, fisheries, fur, and agricultural resources, transportation and tourists, p. 326-406. General conclusions, statistics on population, places and production, and a bibliography (353 items incl. maps).

**Copy seen:** DLC.

**20970. BRUET, EDMOND.** Les plages marines anciennes des côtes de l'Alaska et des îles avoisinantes, de la Mer de Behring et de l'Océan Arctique; leur rapport avec celles des côtes qui bordent la Baie et le Détroit d'Hudson. (Société Géologique de France. Compte rendu, déc. 21, 1942. p. 203-204) **Title tr.:** Ancient marine beaches of the Alaskan coasts and of the adjacent islands of Bering Sea and the Arctic Ocean; their relationship to the coasts of Hudson Bay and Strait.

Note on evidence in the regions mentioned, of uplift following a more ancient subsidence, with recent subsidence of a local nature in both northern Alaska and southern Hudson Bay region.

**Copy seen:** DGS.

**20971. BRUEVICH, S. V.** Oxidation-reduction potential and the pH of sediments of the Barentz and Kara Seas. (Akademiia nauk SSSR. Comptes rendus (Doklady), 1938. nouv. ser., v. 19, no. 8, p. 637-40, map)

Examination of the brown sediments which probably cover the greater part of the great depths of the Arctic Basin.

**Copy seen:** DLC.

**20972. BRUEVICH, S. V.** Skorost' obrazovaniia donnykh otlozhenii v mirovom okeane. (Akademiia nauk SSSR. Institut okeanologii. Trudy 1949. t. 3, p. 90-118, tables) **Title tr.:** The rate of formation of bottom deposits in the world ocean.

Contains sections on the history and present status of the problem; rate of sedimentation in mediterranean and epicontinental seas, including the arctic sea; sedimentation in the "world-ocean" calculated from dissolved run-off from the

continents and from the composition of pelagic sediments; the last section includes data on the Norwegian and Barents Seas. Bibliography (about 60 items). **Copy seen:** DLC.

**20973. BRUMSHTEIN, V. I.** Poteri vlagi chelovekom v pokoe pri razlichnoi temperature vozdukh. (Gigiena i sanitariia, Dec. 1950, no. 12, p. 12-18, 2 fig., 5 tables) **Title tr.:** Loss of moisture at different temperatures in persons at rest.

*Contains* a study on two men and two women exposed to temperatures of 5.3° to 30.6° C., and a varying relative humidity. The loss of moisture was lower in the women than in the men under similar conditions; a gradual decrease of evaporation up to a temperature of 15°-18° C. was noticed, followed by an increase at a further rise of the air temperature (up to 32° C.); the more layers of clothing worn, the higher was the loss of moisture. **Copy seen:** DLC.

**20974. BRUN, ESKE, 1904-** . Grønland efter krigen. (In: Birket-Smith, K., and others. Grønlands bogen, 1950. v. 2, p. 5-16, illus.) **Title tr.:** Greenland after the war.

The author (a district governor, and more recently head of the Greenland administration) describes the earlier Greenland community as self-sufficient, dependent on seal-hunting, and he justifies the state monopoly as protection of the native population. But climatic change, increased educational opportunity, development of fishing and farming, and improved living standards have altered the social and economic structure of the community. It is proposed by the district councils that private business should now be allowed, civil rights extended and that a committee should work on these problems. **Copy seen:** DSI-M.

**20975. BRUN, ESKE, 1904-** . Grønland under den anden verdenskrig. (In: Birket-Smith, K., and others. Grønlands bogen, 1950. v. 1, p. 305-318, illus.) **Title tr.:** Greenland during World War II.

The author, one of the district governors in Greenland at the time of Denmark's capitulation, describes the ad-

ministrative measures taken by the Greenlanders to cooperate with the United States and Canada in aid of the motherland; also notes the wartime economy, sledge patrols along northeastern Greenland, and activities in establishing American bases on Greenland.

*Contains* the results of the investigation of the causes of diseases of woody plants, carried out by the author in parts of Finnmark (Karasjok and Alten) and Nordland (Rannen and Malselvdaalen) in northern Norway, with descriptions of *Peridermium pini*, *Hypoderma pinicola* n. sp., *Lachnellula chrysophthalma* and *Lachnella pini* n. spl, four fungi causing great damage to the forest of northern Norway. **Copy seen:** MH-Z.

**20979. BRUNDIN, LARS ZAKARIAS, 1907-** . Microdota-Studien. (Col. Staphylinidae). (Entomologisk tidskrift, 1938. Årg. 69, häft. 1-2, p. 8-66, illus., plates 1-13) **Title tr.:** Microdota studies (Col. Staphylinidae).

*Contains* a critical revision ofrove beetles (Staphylinidae) of the subgen.

*Microdota*, with a morphological sketch of the subgenus, a key to the species and descriptions of 39 species (twelve new; three new names), with synonymy, critical notes and data on geographic distribution in Fennoscandia and Europe; includes *Atheta platonoffi* n. sp. (Pettasano region), *A. borealla* n. n. (Sydväranger, Norway and Torne Lappmark, Sweden) and two other species, native to northern Fennoscandia. Includes many illustrations and a bibliography (28 items).  
**Copy seen:** MH-Z.

**20980. BRUNDIN, LARS ZAKARIAS, 1907-** . Monographiae der palaearktischer Arten der *Atheta*-Untergattung *Hygroecia* (Coleoptera, Staphylinidae). (Vienna. Naturhistorisches Museum. Annalen, 1942. Bd. 53, Teil II, p. 129-300, plates 1-40) **Title tr.:** A monograph on the palaearctic species of the subgenus *Hygroecia* of the genus *Atheta*.

Contains a monographic study of all known palaearctic species of beetles of the subgenus *Hygroecia* of the genus *Atheta*, with an historical survey, a morphological sketch, data on larvae and pupae and phylogeny of *Hygroecia* species, tables for the determination of the species and descriptions of 34 palaearctic species (five species and three subspecies described as new), a catalog of palaearctic species (p. 278-80), an annotated list of 14 doubtful species and a bibliography (147 items). Includes some species native to northern regions of Europe and Asia.  
**Copy seen:** MH-Z.

**20981. BRUNDIN, LARS ZAKARIAS, 1907-** . Några för landet nya Coleoptera från Torneträskområdet. (Entomologisk tidskrift, 1930. Årg. 51, häft. 1, p. 48-52) **Title tr.:** Coleoptera from the Torneträsk region new to the fauna of Sweden.

Contains critical notes on ten beetles of Swedish Lapland, new to the fauna of Sweden and previously known mostly from Norway and Finland.

**Copy seen:** MH-Z.

**20982. BRUNDIN, LARS ZAKARIAS, 1907-** . Eine neue *Gnypeta* aus den Torneträskgebiete (Col. Staphylinidae). (Notulae entomologicae, 1929. Årg. 50, häft. 1, p. 14-15, plate) **Title tr.:** A new *Gnypeta* from the Torneträsk region.

Contains a diagnosis of a new rove beetle, *Gnypeta sellmani* n. sp. collected by the author in this region of Torne

Lappmark in northern Sweden, and a comparison with some related species.

**Copy seen:** OU.

**20983. BRUNDIN, LARS ZAKARIAS, 1907-** . Studien über die *Atheta*-Untergattung *Oreostiba* Ganglb. (Col. Staphylinidae). (Entomologisk tidskrift, 1940. Årg. 61, häft. 1-2, p. 56-96; häft. 3-4, p. 97-130, illus., plates 1-18) **Title tr.:** Studies of the *Atheta* subgenus *Oreostiba* Ganglb. (Col. Staphylinidae).

Contains a critical study of the subgenus *Oreostiba* of the beetle genus *Atheta*, with a survey of 18 species, including six distributed in northern Scandinavia (Swedish Lapland), Novaya Zemlya, Kanin Peninsula, Lena River region, Chukotsk Peninsula and Kamchatka. Characteristics of the subgenus, secondary sex characteristics, descriptions of male and female genitalia, a key to the species, enumeration of the species are given and a bibliography (57 items).

142-44, häft. 4, p. 145-53) **Title tr.:** Bibliographical and iconographic additions to Frithiof Nordström and Einar Wahlgren's *Svenska fjärilar* [Swedish butterflies] edited by Albert Tullgren, with 50 plates by David Ljungdahl. Part I.

Contains supplemental bibliographical and iconographic data to Nordström and Wahlgren's *Svenska fjärilar*, 1935-41, q. v., with additional data on geographic distribution of 160 lepidoptera described in that work, including many species native to Swedish Lapland.

**Copy seen:** MH-Z.

**20990. BRYK, FELIX, 1882- .** Neue Formen von *Eudia pavonia* (L.) aus Schweden (Lep.: Saturniidae). (Entomologisk tidskrift, 1948. Årg. 69, häft. 3, p. 142-44) **Title tr.:** New forms of *Eudia pavonia* (L.) from Sweden.

Contains a description of *Eudia pavonia* (L.) ssp. *lappmarchica* m. (subsp. nova?) found in Karesuando, Swedish Lapland, in 1883.

**Copy seen:** MH-Z.

**20991. BRYK, FELIX, 1882- .** Neue Schmetterlinge aus dem Reichsmuseum in Stockholm, V. (Entomologisk tidskrift, 1941. Årg. 62, häft. 3-4, p. 141-57, illus.) **Title tr.:** New butterflies from the State Museum at Stockholm, V.

Contains descriptions of 21 new species and subspecies of butterflies, including *Diarsia cuprea venata* n. subsp., *Amphitrola svecica itelmena* n. subsp. and *Polia pisi pisella* n. subsp. all collected by R. Malaise in Kamchatka Peninsula.

**Copy seen:** MH-Z.

**20992. BRYK, FELIX, 1882- .** Zum Nomenklaturfrage der schwedischen *Argynnis improba* Btlr. (Entomologisk tidskrift, 1920, pub. 1921. Årg. 41, häft. 2-4, p. 129-32, illus.) **Title tr.:** On nomenclature of Swedish *Argynnis improba* Btlr.

Contains a taxonomic discussion of identity of *Argynnis improba*, occurring in Torneträsk, Swedish Lapland, held by the author to be a different form than North American type species; a new name *A. improba* is proposed.

**Copy seen:** MH-Z.

**20993. BRYN, HALFDAN, 1864-1933.** Menneskerasernes utviklingshistorie. (Ymer, 1922. v. 43, p. 187-213, 314-59, 14 maps and drawings) **Title tr.:** The history of development of the human races.

Contains (on p. 350) brief remarks on "the paleoarctic race", stressing its hyper-brachycephalic skull (index 87 to 88), short stature (150 cm.), yellow-brown color, pointed cheekbones, etc.

**Copy seen:** InU.

**20994. BRYN, HALFDAN, 1864-1933.** Die Menschenvarietäten Norwegens. (Anthropologischer Anzeiger, 1926. Bd. 3, no. 2, p. 161-86, 7 illus., plates, 5 maps) **Title tr.:** The varieties of men in Norway.

Contains analysis of Lapps (Sames) and northern Finns (Quains) in Norway and their cross-relations with the Norwegians. Statistical data, according to the census of 1920, are presented on "pure" and cross-bred Sames and Quains. The author thinks that the number of "pure Sames" (15,885) was estimated too high, and the number of cross-bred Sames (4,850) too low. "Pure" and cross-bred Quains in Norway are indicated as 5,334 and 3,382 respectively.

**Copy seen:** DSI-M; InU.

**20995. BRYN, HALFDAN, 1864-1933.** Norske folketyper, en antropometrisk-somatisk typeundersøkelse av det Norske folk. (Norske videnskabers selskab, Trondhjem. Skrifter, 1933, pub. 1934, nr. 6, p. 1-128) **Title tr.:** Norwegian folk types, an anthropometric-somatological investigation of the types of the Norwegian people.

Contains results of a study based on body measurements of inhabitants (of Norwegian not Lappish or other stock) in 85 counties of Norway (including 15 counties of Nordland, Tromsø and Finnmark provinces, in the North, p. 105-112). Among this Norwegian population, six anthropological types were found; the last or north Norwegian type is hyperbrachycephalic and undersized. It is represented by inhabitants of the region around Tana (70°30' N. 28°20' E.), in Lappmark. This is a partial and posthumous publication of the author's manuscript (all tables, diagrams, etc., are excluded)

**20996. BUBNOFF, SERGE von, 1888- .** Fennosarmatia; geologische Analyse des europäischen Kerngebietes. Berlin, Akademie-Verlag, 1952. xi, 450 p. illus., maps (part fold.) **Title tr.:** Fennosarmatia; a geological analysis of the European core-area.

Contains an extensive study, based largely on recent sources, of the Russian

Plateau, the Baltic Shield and the Ukrainian (Azov-Podolian) Block, an area considered as geologically the oldest unit of Europe; the Urals though outside this complex, are also dealt with. Consecutive chapters cover the Baltic Shield (p. 2-114), including the Murman, White Sea and Finno-Karelian blocks; Kola and northern Sweden; the Sarmatian Plateau (p. 115-249) including the Pechora valley, Timan mountains, and White Sea area; the Ukrainian (Azov-Podolian) Block (p. 250-342); and the Eurasian borderlands (p. 343-450) including the Urals and Novaya Zemlya. The historical geology (stratigraphy), structure tectonics, etc. as well as mineral resources of each area are described, with bibliography following each chapter.

**21012. BUGAEV, V. A. B. L. Dzerdzeevskii.** Tsirkulatsionnye skhemy v troposfere tsentral'noi Arktiki. (Meteorologiya i gidrologiya, 1947. no. 3, p. 84-85)  
**Title tr.:** B. L. Dzerdzeevskii. Circulation patterns in the troposphere of the central Arctic.

"In a review of B. L. Dzerdzeevskii's paper, based on recent data obtained by explorers of the Arctic (mainly from the drifting station "Severniiy Polius"), the author writes that the principle merit of the study consists in including the Arctic in the synoptic routine. The study proved that, contrary to the classical notion, all the circulation and physical patterns of the troposphere of more southern latitudes exist in the Arctic nearly up to the Pole; changes of weather in the Arctic are also connected with changes of air masses and atmospheric disturbances (cyclones and anticyclones).

Notwithstanding his disagreement with some of Dzerdzhevskii's particular opinions, the author considers the publication as a matter of great importance."—*Meteorological abstracts and bibliography*, Sept. 1951. v. 2, no. 9, p. 744. **21019. BULIARD, ROGER.** Inuk. With an introduction by Fulton J. Sheen. New York. Farrar, Straus & Young Inc., 1951. ix, 322 p., map, illus. (from photos.) on lining papers. English version

with some rearrangement of material of *Inuk, au dos de la terre!*, q. v.

Account of the author's life as Catholic missionary among Eskimos of Victoria Island and the Coppermine region of Mackenzie District, since 1934. Describes his life at the mission, travels, hunting, etc., with quotations from his diary. Throughout, emphasis is on the character and customs of Eskimos as individuals and as a people; and on the author's work toward some adaptation of their traditional attitudes, beliefs and customs to standards of the Catholic mission, and white man's law as administered by Royal Canadian Mounted Police. Deals particularly with murder, infanticide, cannibalism, position of women, etc., with some insight into social and economic, but main emphasis on moral (from the missionary viewpoint) factors involved. The missionary's efforts to counteract exploitation of Eskimos by fur traders, is also noted. Reviewed by Jacques Rousseau in *Arctic*, Sept. 1951. v. 4, p. 135-37.

**21031. BURKY, E. L., and M. D. SMILLIE.** Nasopharyngeal flora in health and during respiratory disease in isolated communities in Alabama and Labrador. (Journal of experimental medicine, 1929. v. 50, p. 643-63)

Contains outline of methods, places and groups studied (Alabama, Labrador); discussion of findings; comparison of findings with the results of other investigations; summary. In Alabama an epidemic of common colds, in Labrador sporadic colds and an epidemic of tracheitis were studied. Gram-negative cocci were found in nearly all normal individuals; in pathological conditions there was a suppression of these organisms. Staphylococci were found in small numbers in about half of the normal individuals; in pathological states they disappeared from nearly all individuals affected but were found in increased numbers in a few individuals. Pfeiffer bacilli were absent or few in normal individuals; during the cold epidemic in Alabama and the epidemic of tracheitis in Labrador, an increase in relative num-

bers and in the number of strains recovered was observed. Hemolytic streptococci were rarely found in normals but during the disease prevalence they appeared in a small number of persons. Indifferent streptococci were rare in Alabama but widely distributed in Labrador among healthy and sick individuals. Green streptococci were widely distributed in both health and disease. "Intermediates" were found in moderate numbers in each series of persons studied. Pneumococci were not found in Alabama in normal individuals but markedly increased in incidence during the cold epidemic; in Labrador they are part of the normal throat flora and the strain avirulent. A variety of other organisms were found in small numbers in many healthy and sick individuals.

**21039. BURTON, ALAN CHADBURN, 1904-** . The range and variability of the blood flow in the human fingers and the vasomotor regulation of body temperature. (American journal of physiology, Oct. 1939. v. 127, no. 3, p. 437-53, 12 fig.)

Contains a study of blood flow in the finger made by an adapted plethysmographic method and expressed in cc./min./100 cc. of tissue. The range of blood flow was found to be 0.5-1.0 cc. as a minimum, up to 80-90 cc./min./100 cc. of tissue; this tremendous range represents the mechanism of temperature regulation by elimination of body heat. An analysis of the fluctuations in flow and their dependence on factors other than temperature, is also presented. Bibliography (28 items). **Copy seen:** DLC.

**21040. BURTON, ALAN CHADBURN, 1904-** , and others. Slow adaptations in the heat exchanges of man to changed climatic conditions. (American journal of physiology, Apr. 1940. v. 129, p. 84-101, diagrs.) Other authors: J. C. Scott, B. McGlone, and H. C. Bazett.

Authors conclude that under cool conditions (1) average caloric intake was significantly greater, (2) foods of higher caloric value per gram, which had a lower equivalent respiratory quotient were chosen, (3) radiation and convection losses decreased as adaptation to cold proceeded. Bibliography (11 items).

**Copy seen:** DLC.

**21041. BURTON, ALAN CHADBURN, 1904-** . A study of the adjustment of peripheral vascular tone to the requirements of the regulation of body temperature. (American journal of physiology, June 1940. v. 129, no. 3, p. 565-77, 8 fig.)

Contains a study of the rhythmic fluctuations of peripheral vascular tone under various conditions of heat loss, in order to determine "how they are modified to maintain an appropriate value for the average peripheral blood flow." Intervals between constrictions at a comfortable environmental temperature averaged 50-60 seconds. With increase in temperature the intervals between constrictions increased. The rhythm of vasoconstriction in a constant tem-

perature water bath was found to be essentially similar to that in air, suggesting that intermittence of tone cannot be due to intermittence of skin temperature. Data on average size of pulsation, amplitudes of fluctuations at given environmental temperatures, etc., are also presented and conclusions drawn. Bibliography (14 items).

**21050. BUTLER, LEONARD, 1912-** Population cycles and color phase genetics of the colored fox in Quebec. (Canadian journal of zoology, Feb. 1951. v. 29, p. 24-41, sketch map, diags.)

Based on pelt collection data 1916-48 furnished by the Fur Trade Dept. of the Hudson's Bay Co., grouped into six regions which include (1) Hudson Strait, (2) Hudson Bay, (3) upper, and (4) lower James Bay. A few of the facts are that "the length of cycle for animals north of the tree line or in the arctic tundra is four years. Any animal which occurs in both arctic and nonarctic regions shows the characteristic cycle of the region in which it is living; both the cycle and color phase data indicate that northward migrations have taken place." Bibliography (10 items).

**21071. CAHN, ALVIN ROBERT, 1892-** Canned crab industry of Japan. Washington, 1948. 50 p. incl. front., plate, tables, illus. (incl. 8 maps, diagrs.). (U. S. Fish and Wildlife Service. Fishery leaflet 314) Mimeographed.

"This is a reproduction of Report no. 109, Natural Resources Section, General Headquarters, Supreme Commander for the Allied Powers, Tokyo, issued July 26, 1948."

Report mainly on conditions before 1940, the last year considered as near normal. Areas of crab industry include Kamchatka's western and eastern shores, and Bering Sea near and in Bristol Bay, with a land cannery operating on the west coast of Kamchatka, floating canneries and trawlers in Kamchatkan and Alaskan waters. Description is given of the operation, inspection, grading, specifications, bacteriology and byproducts of the industry. Tabular data on: factory ships in operation, and catch and pack of such ships in Sea of Okhotsk 1926-42, and Alaskan waters 1932-40; also on crab fishing grounds off eastern Kamchatka, 1939.

**21077. CAJANDER, AIMO KAARLO, 1879-1943.** Ein Beitrag zur Entwicklungsgeschichte der nordfinnischen Moore. Helsingfors, 1902-1903. 37 p. plate. (*Fennia*, 20:6) *Title tr.*: A contribution to the history of development of the northern Finnish bogs.

*Contains* annotations on the flora making up three peat bogs in the valley of the Tornio and Kemi Rivers. In addition to lists of the plants in 42 test spots (indicated on sketch maps), the topography, surroundings, water and soil conditions, are noted. *Copy seen*: DLC.

**21078. CAJANDER, AIMO KAARLO, 1879-1943.** Metsätüypiteoria. Helsinki, 1925. 84 p., tables. (*Acta forestalia fennica*, 29:2) *Title tr.*: The theory

of forest types. Also pub. in English with title as above, q. v.

*Contains* (in this classic work on forest classification) chapters on the classification of forests according to quality; methods formerly used for assessing the quality of the locality; the forest types and their relation to forest mensuration, soil, plant biology and silviculture; application of forest types in practical forestry and for statistical purposes; forest types in relation to other vegetation types; forest types and problems of settlement, colonization, qualitative changes of locality; international forest problems. Arctic areas are specifically dealt with while describing the *Empetrum*-*Myrtillus* and *Hylocomium*-*Myrtillus* types of forest and also *Geranium*-*Dryopteris* and *Cladina* types (p. 34-39); general aspects of climate and forest types are dealt with in conclusion.

*Copy seen*: DLC.

**21079. CAJANDER, AIMO KAARLO, 1879-1943.** Studien über die Moore Finnlands. Helsingfors, 1913. 208 p. 14 illus., 20 plates, maps, (incl. 4 fold.). (*Acta forestalia fennica*, v. 2, no. 3) *Title tr.*: Studies on Finnish bogs.

*Contains* a general part dealing with definitions and classifications of bogs (according to: geological, biological, plant ecological criteria; chemical composition of the water; thickness of peat layer; occurrence of trees, etc.); kinds of Finnish bogs; genesis of bogs; degree of humidity; bog complexes and bog forests. The special part (p. 87-207), deals with the different types and subtypes of bogs; their vegetation and other characteristics, etc. Bibliographical footnotes.

**21086. CALHOUN, JOHN BUMPASS, 1917-** Population cycles and gene frequency fluctuations in foxes of the genus *Vulpes*, in Canada. (Canadian journal of research, Apr. 1950. v. 28, sect. D, p. 45-57, diags.)

"Contribution from the Department of Zoology and Entomology, The Ohio State University, and the Rodent Ecology Project of the Department of Parasitology, School of Hygiene and Public Health, The Johns Hopkins University. The work reported in this paper was partially conducted under a grant from the International Health Division of the Rockefeller Foundation." On the basis of tabulations of the numbers of red, cross, and silver color phases on phenotypes taken each year from seven provinces, including Quebec, Ontario, Manitoba and Northwest Territories, changes in population density were investigated with reference to changes in frequency of

the two genes that determine the presence of black rather than red pigment of the pelage. Bibliography (11 items).

**21087. CAMERON, AUSTIN W., and W. A. MORRIS.** The mammals of the Lake Mistassini and Lake Albanel regions, Quebec. (Canada. National Museum. Bulletin 123, its Annual report of 1949-50, pub. 1951, p. 120-30)

Contains results of biological investigations by a field party of the National Museum in summer 1947 under W. Earl Godfrey. The mammals collected were studied by the senior author. The climate and physiography of the area (about 200 miles east of Rupert House on James Bay) and vegetation are described. The mammalian fauna is characterized as previously little known and rather poor due to conditions of habitat, excessive trapping (muskrat and other fur-bearers) and indiscriminate hunting (caribou). A list of 30 animals is offered with number of specimens collected, measurements, notes on habitat, previous reports of occurrence, etc. The birds collected by this party were reported by W. E. Godfrey, q. v.

*Contains* outline of history and administration of Indian affairs: education, welfare, population data in 1944. (North-west Territories: 3816; Yukon: 1531), etc.

*Copy seen:* D.L.C.

**21096. CANADA. DEPT. OF MINES AND TECHNICAL SURVEYS.** Geographical branch. An introduction to the geography of the Canadian Arctic. Ottawa, King's Printer, 1951. xiii, 118 p. front. illus., 18 maps, incl. 6 fold (Canadian geography information series, no. 2)

*Contains* in this basic elementary manual, introduction by J. Wreford Watson, on the limits, significance and divisions of the Canadian Arctic; followed by chapters (mainly by J. Lewis Robinson, with contributions also by N. L. Nicholson, J. K. Fraser, B. G. Gutsell and D. Leechman, final maps by R. J. Gajda) on: (1-2) the physical geography of land, air and water, with characterization of each of the principal islands as well as mainland in Eastern and Western Canadian Arctic; (3) soils, vegetation, and wildlife; (4) discovery and exploration, with annotated chronology; (5) white population and settlements; (6) Eskimos; (7) transportation and communications; (8) economic resources: fur trade, reindeer herding, minerals; (9) government and social services. Bibliography (about 50 items).

Reviewed critically by P. D. Baird in *Arctic*, July 1952, v. 5, no. 2, p. 127-38.

**21098. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT.** New records in Yukon. (Western miner, Apr. 1951. v. 24, no. 4, p. 84-86, *illus.*)

On the basis of preliminary estimates for 1950, report is given of production of gold, and silver-lead-zinc-cadmium, with special notes on the Whitehorse, Dawson and Mayo mining districts.

**Copy seen:** DGS.

**21099. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT.** Settlements and trading posts of the Northwest Territories. May 1951. Ottawa, Northern Administration and Lands Branch, 1951. 71. mimeographed.

List of 81 settlements in N. W. T. and those in northern Quebec and Manitoba served by the Eastern Arctic Patrol. For each is indicated its location, resident officers, facilities, etc.

**Copy seen:** CaMAL.

**21100. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT.** Yellowknife output increases. (Western miner, Apr. 1951. v. 24, no. 4, p. 82-83, *illus.*)

General report based on preliminary estimates, 1950, of gold production, and exploratory activity in petroleum and uranium fields in the Northwest Territories.

**Copy seen:** DGS.

**21101. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT.** Development Services Branch. Banner year at Yellowknife. (Western miner, Apr. 1950. v. 23, no. 4, p. 40-42, *illus.*)

Brief notes on mining developments, surveys, and prospecting during 1949, in 14 localities of Northwest Territories.

**Copy seen:** DGS.

**21102. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT.** Development Services Branch. Greatest post-war year in Yukon. (Western miner, Apr. 1950. v. 23, no. 4, p. 35-37, *illus.*)

Review of 1949 mineral production for the three administrative divisions, Dawson, Mayo and Whitehorse mining districts, with note on transportation, especially roads.

**Copy seen:** DGS.

**CANADA. DEPT. OF RESOURCES & DEVELOPMENT.** Northern Administration & Lands Branch, *see Arctic circular*. Maps of NWT. 1952. No. 20275.

**21103. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT. NORTHERN ADMINISTRATIONS.** Reindeer herding in Canada. Ottawa, 1950. 41. Mimeographed.

Report on status of the herds after the annual roundups in summer 1950: one herd under government, two under native management, altogether about 7500 head, on the 6600 square mile reindeer reserve along the east side of the Mackenzie delta. A retrospective summary is given of Canadian government activity since 1919, importing reindeer and Lapp herders, and training Eskimos to reindeer ranching as a means of stable livelihood. Finally the utilization of the reindeer products, study of reindeer problems and work of the Reindeer Range station under Lee Bryant Post is remarked upon.

**21106. CANADA. DEPT. OF RESOURCES AND DEVELOPMENT.** Water Resources Division. Surface water supply of Canada. St. Lawrence and southern Hudson Bay drainage... climatic years 1945/46-1948/49. Ottawa 1950-52. 2 v. (*Its*: Water resources paper no. 99, 103)

*Includes* data for the southern Hudson Bay drainage, on monthly and daily discharge of the Missinaibi, Mattagami, Abitibi and Harricana Rivers, Oct. 1945-Sept. 1949, at points south of the geographic limits of this Bibliography. For earlier data, see *Arctic Bibliography* No. 2759. *File seen*: DGS.

**21107. CANADA. DEPT. OF TRANSPORT.** Navigation conditions on the Hudson Bay Route from the Atlantic seaboard to the port of Churchill, season of navigation 1948 [-1951]. Ottawa, King's printer, 1949-1952. 4 v. (20th-23d annual reports)

*Contains* annual compilations of data similar in scope and detail to previous years' reports (*Arctic Bibliography* No. 2756): dates of opening and closing of navigation and the conditions of progress of the break-up and the starting of ice formation at various points of Hudson Bay and Strait; information on ice conditions and navigability in these waters, extracted from the log of ships that cruised in the area; particulars of ships using the port of Churchill; list of aids to navigation such as radio, coast and lighthouses. Meteorological data are reported from the patrol vessels and stations at Resolution Island, Cape Hopes Advance, Nottingham Island, Churchill, Chesterfield, Port Harrison, and Coral Harbour on Southampton Island. *Rupert Island* and *C. D. Howe*, new vessels operating in the Canadian Eastern Arctic are noted.

*File seen*: DN-HO.

**CANADA. DEPT. OF TRANSPORT.** Meteorological Division, see Rae, R. W. Climate Canadian arctic archipelago. 1951. No. 25333.

**21108. CANADA. FISHERIES RESEARCH BOARD.** Annual report for 1950. Ottawa, King's Printer, 1951. 138 p., diagrs., text in English and French.

*Contains* reports on work of the biological and fisheries research stations, including (p. 67-70) Eastern Arctic investigations from the *Calanus*' cruise June-Sept. to Hudson Strait and Ungava Bay.

Notes (by M. J. Dunbar) on continued study of cod, seal, arctic char, and on possibilities for fishery resources (seal, shark, cod, beluga, also fresh-water fishes) to be utilized to alleviate the deteriorating economic condition of Eskimos of the Ungava Bay region.

*Copy seen:* CaMAI.

**21109. CANADA. FISHERIES RESEARCH BOARD.** Annual report for 1951. Ottawa, King's printer, 1952.

*Includes* (p. 108-111) report (by M. J. Dunbar) on the work of the *Calanus* during the 1951 season: oceanographic profiles of Ungava Bay and Frobisher Bay, with experimental dredging, trawling and line-fishing; investigation of "Ogak Lake" (at the head of Ney Harbour, Frobisher Bay) and its cod population; work on the arctic char in the Sylvia Grinnell River, Frobisher Bay (p. 111-12); analysis of Ungava Bay plankton copepods, and oceanographic work in the Beaufort Sea (p. 112).

**21110. CANADA. GEODETIC SERVICE.** Report on areas of Northwest Territories (District of Keewatin) visited in 1943 in connection with a program of astronomical observations for map control, required for preparation of Air Navigation charts. November 17, 1943. B. J. Woodruff: Some impressions of Keewatin District adjacent to the Hudson Bay. 10 l. (typewritten), 49 mounted photographs on 23 l.

From his reconnaissance by boat of coastal region and islands in 1942, and of land area north and west of Churchill by air in 1943, the author remarks on vegetation, game and fish, fox and seal hunting. Attempts at vegetable cultivation, life of Eskimos of the region, particularly as affected by trade in white man's goods. Photographs show type of vegetation, archeological remains, aerial views of the region, etc.

*Copy seen:* CaMAI.

**21111. CANADA. GEODETIC SERVICE.** Report on areas of Yukon Territory and Northwest Territories (District of Mackenzie) visited in 1943 in connection with a program of astronomical observations for map control, required for preparation of Air Navigation charts. November 17, 1943. C. B. C. Donnelly. 38 l. (typewritten), fold. map, 141 mounted photographs on 47 l.

*Contains* narrative of 12,000 flights

made in the area, with description of vegetation, wildlife, native and white inhabitants, resources, game, hunting practices and economic returns.

*Copy seen:* CaMAI.

**21124. CARLSON, HARRY.** Calculation of depth of thaw in frozen ground. (National Research Council. Highway Research Board. Frost action in soils, a symposium. Its: Special report, 1952. no. 2 (N. R. C. pub. no. 213) p. 192-223, illus.)

Formulas for depth of freezing calculations were checked against test results and modified for calculating depth of thaw. A correction factor was developed for the relations between air temperatures and various surfaces such as concrete, asphalt, gravel, and vegetation. Factors involved in the calculations include air temperature, type of surface, soil density, moisture and thermal conductivity. Checks on the formulas were made at various airfields in Alaska and at test structures in Fairbanks from 1945 to 1947. The formulas can be used to indicate the relative merits of various materials in preventing frost penetration. Further research is recommended."—SIPRE.

**21126. CARLSON, LUCILE.** The mining district of Kiruna Stad, Sweden. (Scientific monthly, Feb. 1952. v. 74, no. 2, p. 76-83, illus. diags., maps).

Contains an account of the mining town of Kiruna (67°50' N., 20°15' E.) its location, area, population, the iron deposits, their extent and qualities; methods of mining; conditions in winter (with tabular data on temperatures, etc. 1950-1951); production; export and export routes; customers, etc. **Copy seen:** DA.

**21127. CARPE, ALLEN, d. 1932.** Observations. (*In:* Alpine Club of Canada. The Mount Logan Expedition. *Pub.* in: Canadian alpine journal, 1925. v. 15, p. 81-98, incl. tables, 3 plates, diag.)

Contains notes on topographic changes needed on (then) existing maps, concerning certain glaciers, cols and cliffs on the mountain; altitudes; physiological observations on respiration; remarks on cameras and film; glacier, snow and meteorological conditions (including optical phenomena, shadow images and fog-bows or halos); and tabular record of air temperature observations, May 12-July 2, 1925 (several times daily, irregular, with some overnight minimums). **Copy seen:** DGS.

**21128. CARPENTER, FRANCES, 1890-** Canada and her northern neighbors. [New York] American Book Co. [1946, 1953] ix, [1], 438 p. illus. (incl. ports., maps)

Contains a popular geographic and historical survey for young people. An imaginary flight over the area presents the main physical features, locations, climate, and is supplemented by corresponding data and figures. The conquest and opening of the country is outlined. Labrador, the Yukon, Northwest Territories are treated among other areas. Greenland and Alaska are surveyed as "her northern neighbors."

**21131. CASE, R. A. M.** A study of the incidence of disease in a whaling expedition to the Antarctic pelagic whaling grounds 1946-7. (*British journal of social medicine*, 1948. v. 2, p. 1-17, tables, diag.)

Detailed hospital data accumulated aboard the *Balaena* 1946-47 showed that the whaling season exercises a deleterious influence on the health of the crew of the factory ship. The largest increase of diseases occurred in those classified as "suppurative lesions, traumatic lesions without sepsis, non-diarrhoeic alimentary disorders, 'rheumatic' conditions, and dental disorders". Sepsis was often associated with the intestinal flora of the whales, which soon after death cause heavy contamination of the meat; it is therefore suggested that lapse of time between killing and processing the whale be kept at a minimum. Gas gangrene should be considered as a real danger to whalers and hospital stores and equipment organized accordingly.—From author's summary. Bibliography (5 items).

**21132. CASSEL, F. L.** Snow and ice mechanics. (Civil engineering and public works review, Nov. 1950. v. 45, p. 715-17)

General discussion of directions taken in the fundamental research on snow and ice since 1934, the analogy of snow mechanics with soil mechanics, snow sampling and sounding methods, strength tests and theories on snow pressure and creep.

"Objectives of snow and ice mechanics studies include: (1) physical changes involved in the aging of snow, (2) forces exerted by snow creep, and (3) compressive, tensile, and shear strength. The methods of research and instrumentation used in snow and ice mechanics are similar to those used in soil mechanics. Methods of sampling snow consist in obtaining undisturbed cores by means of cylindrical tubes. Both snow fields and soil sediments are sounded with a ramsonde which consists of a rod with a conical tip. Tensile strength is measured by rotating undisturbed specimen until centrifugal force causes fracture. Some pressure theories assume a cohesive, striated, and foliated mass in which failure planes form in planes of discontinuity. Maximum snow pressure is caused by a creeping mass in which the stresses are below the shear strength due to the plasticity of the snow."—SIPRE.

Ocherki po istorii znanii, 2) **Title tr.:** Tribute to M. A. Castrén on the 75th anniversary of his death.

**Contents:** S. F. Ol'denburg. Predislovie (Introduction): Appraisal of the cooperation between Franz Anton Schiefner and Castrén.

V. G. Bogoraz. Kastren, chelovek i uchenyi (Castrén as man and scholar) p. 3-35. A characterization of Castrén's personality with many quotations from his letters and works.

L. I. A. Shternberg. Kastren, altaist, étnograf (Castrén as an altaist and ethnographer) p. 36-56. Discussion of his intuitive ability to discover affinities between linguistic groups, his recognition of agglutination among all the Ural-Altaic languages, his discovery that peoples speaking related languages show also affinities in cultural manifestations, his attitude to theories on social organization of primitive peoples, on development of magic, folk medicine, etc.

D. V. Bubrikh. Kastren, issledovatel' finno-ugorskikh narodnostei (Castrén as investigator of the Finno-Ugric nationalities) p. 57-64. The object of his study was rather Samoyeds than Finns and he was doomed (by early death) to be more collector of material than investigator; nevertheless, he laid the foundation for Finno-Ugric studies.

N. N. Poppe. Kastren, issledovatel' samoedskikh âzykov (Castrén as investigator of the Samoyedic languages) p. 65-75. Sketch of his years devoted to this task, his sojourn 1842-44 among the Samoyeds, his financial support from the

Russian Academy of Sciences and assistance of academician Sjögren; his Samoyedic grammar and vocabulary published posthumously in 1854-55.

A. N. Samollovich. Kastren, turkoved (Castrén and his Turcic research) p. 76-86. Remarks on his investigation of the Koibal and Karagas languages.

B. I. A. Vladimirov. Kastren, mongolist (Castrén and his Mongolic research) p. 87-92. Account of his meeting with the Buryats in 1845-49.

V. G. Bogoraz. Kastren, issledovatel' paleoaziatsk (Castrén as investigator of the Paleosiasatics) p. 93-108. Discussion of his linguistic work among the Yeniseians or Ket.

I. A. P. Koshkin. Kastren, tungusoved (Castrén as investigator of the Tungus) p. 109-129. Remarks on his incidental descriptions made in 1846, of Tungus clothing, tents, dances and games, beliefs about the bear, etc.; his dissertation (1850) dealing with Tungus affixes, and his intention to learn the Manchu language.

L. B. Modzalevskii. Materialy dlia bibliografii trudov M.-A. Kastrena i literatury o M.-A. Kastrene (Materials for a bibliography of Castrén's works and bibliography of the literature about Castrén) p. 130-41.

This volume is reviewed extensively in *M. A. Castrén's memory in Russia* by Kai Donner, 1932, q. v. **Copy seen:** DLC.

**21136. CASTRÉN, MATTHIAS ALEXANDER, 1813-1852.** Samojedische Volksdichtung; gesammelt von M. A. Castrén, herausgegeben von T. Lehtisalo. Helsinki, Suomalais-ugrilainen Seura; 1940. xxv p., 350 p. (Suomalais-ugrilainen seura. Toimituksia, v. 83) **Title tr.:** Samoyed folklore collected by M. A. Castrén, edited by T. Lehtisalo.

These materials were collected by Castrén during his two journeys of 1842-44 and 1845-49. After his untimely death in 1852, only a small part of them was published in 1855 by A. Schiefner as an appendix to M. A. Castrén's posthumous *Wörterverzeichnisse aus den Samojedischen Sprachen*. The present is the complete edition, offering both Yurak and Ostyak-Samoyed songs. Among the 19 Yurak texts are hero, narrative, and drunkenness songs, a shaman's song, a lamentation, and a so-called singing story. Among the Ostyak-Samoyed songs, the four longer ones are hero songs, the other four rather fragmentary. **Copy seen:** DLC; InU.

**21138. CASWELL, JOHN EDWARDS, 1913-** . Materials for the history of arctic America. (Pacific historical review, Aug. 1951. v. 20, p. 219-26)

Review of basic source materials for Alaska and the Canadian Arctic, mentioning the locations in the United States where these publications, or whole collections, are housed.

**Copy seen:** DLC.

**21139. CASWELL, JOHN EDWARDS, 1913-** . The utilization of the scientific reports of United States arctic expeditions 1850-1909. Stanford University, July 1951. 304 p. (*Its:* Technical report no. 2)

"The developments from the work of arctic expeditions are presented by subject field in a series of essays, based on original manuscripts, archives, and government reports. The basic subject fields covered are geography, hydrology, meteorology, geology, magnetic observations, zoology, botany, and anthropology. The scientific accomplishments of specific expeditions are recounted in detail. The origin of popular concepts of the Arctic is traced through an examination of the literature concurrent with the expeditionary era."—SIPRE. Bibliography (250 items). **CHAPMAN, HOWARD,** *see* Arthur, E. R., & others. Moose Factory. 1949. No. 20329.

**21151. CHAPMAN, Mrs. OLIVE MURRAY.** Across Lapland with sledge and reindeer. New York, Dodd Mead & Co., 1932. 5 p. l., xiii-xiv p., 1 l., 212 p. plates (part col.), sketch map.

Originally published by John Lane, London 1932; new ed. 1949 (164 p.); also pub. by Penguin books, Harmondsworth, Eng. 1939 (183 p.)

*Contains* narrative of the author's trip to study the nomad Lapps under winter conditions, traveling from Hammerfest to Bossekop, Karasjok, Kautokeino, Karesuando, Soppero, Kiruna, Abisko and Narvik, during Mar.-May 1931. Description is given of Lappish customs, habitations, costumes, physical types, way of life, etc., noting particularly regional differences in Swedish, Finnish and Norwegian Lapps, nomad and settled communities. The annual Lapp market at Bossekop, Easter celebration at Karasjok, sledges, reindeer herding and driving are treated in detail. Penetration of Swedish and Norwegian influence in Lapland by schools, courts, church, etc. is noted. Author's photographs and water-color sketches embellish the book.

*Copy seen:* DLC (1932, 1939, 1949 editions).

**21152. CHAPMAN, SYDNEY.** Theories of the aurora polaris. (Annales de géophysique, Apr./June 1952. t. 8, no. 2, p. 205-225)

*Contains* a presentation of the neutral ionized stream (or gas) hypothesis of magnetic storms and auroras, as proposed by the author and Ferraro, and of a similar theory developed by Alfvén. The account is preceded by an introductory note on Birkeland's ideas (shared earlier

by the author) on the charged particle nature of these streams emanating from the sun, and the refutation of this theory. Bibliography (12 items).

A textbook for the 7th grade of seven-year schools and high schools. 10th edition. Approved by the Ministry of Education R.S.F.S.R.

Contains concise and comprehensive presentation (at the junior college level) of the essentials of the physical and economic geography of U.S.S.R. Short chapters on the seas, relief, mineral resources, climate (brief general summary of the climatic characteristics of the U.S.S.R.: temperature, precipitation, etc., and more specific description of the climate of the Arctic, subtropical areas and the monsoon climate of the Far East), rivers and lakes, soils, vegetation, etc.; followed by more detailed treatment of European and Asiatic U.S.S.R. in 13 regions. Sections dealing with arctic areas include: Arctic Ocean, its branches and Northern Sea Route (p. 5-7); tundra and taiga (p. 32-37); northern part of European Russia (p. 54-68) northern areas of western and eastern Siberia (p. 139-62), and the Far East (p. 162-74). Previous editions appeared: 6th in 1947, 5th in 1946, 3rd in 1940.

**21161. CHEKIN, V. I. A.** Chto predokhranayet narodnosti Krafnego Severa ot tsyngi. (Priroda, 1950. god 39, no. 10, p. 53) **Title tr.:** What protects the peoples of the far North from scurvy?

Contains a popular discussion of vitamins in general and vitamin C in particular. Natives of arctic U.S.S.R. are claimed (on the basis of the author's observations of natives of Bol'shezemel'skaya Tundra) to cover their need in vitamin C by eating raw meat of the reindeer and drinking its blood. Since cattle have a very low vitamin C content, this idea gained little credence among experts. The author's studies however, showed that reindeer meat contains several times the amount of vitamin C as compared with that of cattle, the blood being about equal. Bibliography (6 items).

**21162. CHEKIN, V. I. A.** Profilaktika tsyngi na Krafnem Severe. (Sovetskaya meditsina, Feb. 1952. v. 16, no. 2, p. 28-29) **Title tr.:** Prevention of scurvy in the far North.

Contains a discussion (by a physician in Komi A.S.S.R.) on the vitamin C content and antiscorbutic activity of fruits and vegetables, items absent from the diet of the people native in the North. The low vitamin C content in cattle is noted and the author's study of the content of this vitamin in reindeer reported. The blood, muscle, liver, brain, etc., of deer and cattle were examined and compared. Except for the blood, all other samples of the reindeer contained several times more vitamin C than those of cattle. This explains the ability of the natives and some travelers in the North to resist scurvy, without a fruit-vegetable component in the diet. After several months of frozen-storage, the vitamin C content of reindeer meat fell considerably.

**21165. CHERNETSOV, VALERIÏ NIKOLAEVICH, 1905-**. Byt khandov i mansi po risunkam XIX v. (Akademiâ nauk SSSR. Muzei antropologii i étnografii. Sbornik, 1949. t. 10, p. 7-33, 26 illus., incl. 6 plates) *Title tr.:* Life of the Ostyaks and Voguls from the drawings of the 19th century.

*Contains* description, with comments, of six tapestries, covered with paintings depicting the daily life of the Ostyaks and Voguls: hunting, fishing, reindeer-sledge and boat travel, camp and tents from outside and inside, etc. The paintings were done not by the natives, but by somebody who knew a little about the technique of art. Some of the paintings bear the signature of Nikolai Shakhov and were evidently done about 1849-1855. The tapestries, stored in Muzei antropologii i étnografii, originated in the Obdorsk District and have ethnographical value because of their naturalism.

ustroïstvo obsko-îgorskogo obschestva. (Sovetskââ étnografiâ. Sbornik statei, 1939. t. 2, p. 20-42, 8 illus.) *Title tr.:* The phratral organization of the Ob'-Ugrian society.

*Contains* study on the social organization of Voguls and Ostyaks before the coming of the Russians, of which some features have survived to the present. Each people is divided into two phratries (*mazum*), one is called *môs*, the other *pôr*; each phratry consists of several clans; members of the same phratry however, are considered to be related and may not intermarry; the totem of the *môs* phratry is the hare, and that of the *pôr*, the bear. There are two centers of cult: that of the phratry *môs* in the village of Belogorye (61° N. 68° E.) and that of the phratry *pôr* in the village of Vezhakorye (Jalp-us) on the Ob' River; the ceremonies and prayers of each are held secretly from members of the other phratry. The article includes texts of religious songs and photographic illus. of objects of cult. Summary in French. *Copy seen:* DLC.

**21180. CHERNYSHOFF, M. J.** Search for underground water in perpetually frozen areas. (American Water Works Association. Journal, May 1935. v. 27, p. 581-93, illus., diags.)

Practical advice, by a professor of mechanical engineering, on practices and methods of getting water from three known sources.

"Water has been found during the past 20 years in permafrost areas, above the permafrost in hidden and open springs, and under the permafrost layer. Subsoil waters above permafrost are formed by the infiltration of atmospheric precipitation and by condensation of moisture in frostless seasons. Hydrostatic pressure results when the ground freezes

above the permeating water. Ice fields may form when water under pressure breaks through the ground. Subsoil water is not a reliable source of water supply. Spring water usually rises to the surface from deep strata on valley slopes exposed to sunlight. The springs' head can be found by borings and underground temperature measurements. The relatively high temperature of the water causes thawing around its source. Spring water offers a more reliable supply of water than subsoil water. Artesian waters result from atmospheric moisture, and are located by borings. Artesian water often has a temperature of +3° C. and care must be taken to avoid freezing the water in the bore hole."—SIPRE.

**21200. CHODZIDŁO, TEOFIL.** Die Familie bei den Jakuten. Freiburg in der Schweiz, Paulus-Verlag, 1951. 462 p. fold. map. (Internationale Schriftenreihe für soziale und politische Wissenschaften. Ethnologische Reihe, Bd. 1) **Title tr.:** The family among the Yakuts.

Contains monographic treatment (dated 1945) of the social organization and family life among the Yakuts: choosing of a mate (woman has little to say), marriage customs, loose sexual attitude before the marriage, bride price and dowry, marriage ceremonies, the position of husband and wife in the family (patriarchal status, the wife working the harder), polygamy, the rearing of children, causes for divorce (sterility of wife is the most legitimate ground for both polygamy and divorce), the position of widows and unmarried girls.

An introductory chapter (p. 23-39) outlines the geography, sociology and religion; the Yakut A.S.S.R. has an area of 4,023,307 sq. km. and over 220,000 inhabitants (87 percent Yakuts); the "republic" is divided into seven districts (*okrug*): Yakutsk, Viluysk, Olekminsk, Verkhoyansk, Aldan, Bulun and Kolymsk (in the first three, Yakuts comprise 94.1 per cent of the population); each district, except Kolymsk, consists of several *ulus*, the latter consisting of many *nasleg's* which again consist of many clans (*aga-usa*), and finally the clan is composed of several individual families (*kargan*). The last chapter (p. 400-421) deals with the origin and former homeland of Yakuts, based on linguistic, anthropological, archeological and ethnographic (legends of origin) research: the Yakuts represent the oldest branch of the Turcic linguistic family, are composed of three ethnic groups, the Urianghai, Sakha and Khoro, and came from the region of the Upper Lena about 700 years ago, driven out of their old homeland by Kirkhiz and later pushed further north by Buryats. Originally a horse-breeding people, the Yakuts of today are going over to cattle breeding (the proportion of horses and cattle is 1:3).

Extensive indexes (personal, ethnographic-geographic) and bibliography (100 items) also an appraisal (p. 40-53) of the ethnographic sources of the study are included.

**21231. CLARK, LLOYD K.** Human waste disposal by small groups and individuals in the Arctic. Report to the Subcommittee on Waste Disposal. Washington, D. C., [1951]. 11 p. (National Research Council, Committee on Sanitary Engineering and Environment).

"Information on waste disposal methods in the Arctic is furnished by various agencies, such as, the Royal Canadian Mounted Police, the Canadian Dept. of Health and Welfare, the Canadian Army, and the U. S. Army. The Canadian Army advocates the use of tin receptacles as urinals which may be set outside to freeze prior to disposal. Information regarding native practices of excreting and disposing is given. It is concluded that where pit latrines are not feasible, metal or other re-usable containers, containing chemicals, should be used. Precautions should be taken to bury excreta wherever possible. A number of recommendations are made including the study of various single-use containers, the feasibility of incineration, and means for digging pit latrines in permafrost."—SIPRE. Bibliography (10 items).

**Copy seen:** DLC (SIPRE Project files).

**21232. CLARK, LLOYD K.** Insulating material for sewage systems in permafrost areas. A report to the Subcommittee on Waste Disposal. (National Research Council, Committee on Sanitary Engineering and Environment. Bulletin, 1950. p. 457-67).

"A composite of the replies received to a questionnaire designed to obtain information on the installation of sewerage in arctic and subarctic areas is presented. Commercial concerns indicated that insulated pipes combined with waterproof seals or coatings would be suitable. Alaskan military establishments use un-insulated pipes installed in utilidors with steam lines; mineral-wood type insulation faced with a vapor seal is used for treatment units and house lines. The utilidors are costly to install and create sanitary hazards. The Fairbanks (Alaska) and Yellowknife (Canada) systems are the sole users of natural insulating materials (peat, moss). The former contains faulty installations; the latter has operated satisfactorily for a year. A report concerning the water lines in Siberia (Permafrost of Permanently Frozen Grounds and Related Engineering Problems, J. W. Edwards, Inc., Ann Arbor, Mich., 1947) is reviewed. Recommendations include inserting thermometers at strategic points in the pipe line and adding auxiliary heat in critical-temperature areas. A study is proposed to determine the heat-loss coefficients of various pipes (vitrified tile, concrete, cement-asbestos) and heat conductivities of naturally occurring earth materials below 32° F."—SIPRE.

*Contains* replies of various agencies which were asked for information on this subject, including commercial concerns, U.S. Dept. of the Army, Navy, Air Force; U. S. Public Health Service, Alaska Dept. of Health, and Canadian government agencies. **Copy seen:** CaMAI; DSG.

**21233. CLARK, VICTOR F.** Icing nomenclature. (*In:* Harvard-Mount Washington Icing Research Report 1946-1947. Tech. Rept. no. 5676, by Harvard U. and Mt. Washington Observatory, Inc. W33-038-ac-15827. June 22, 1948, p. 415-81, incl. illus. graphs).

"Descriptions, distribution of occurrence, and photographs are presented of the various types of ice observed at the Mt. Washington Observatory over a period of five years along with a brief description of the weather conditions favorable for each type of ice. A standard classification of ice based on appearance is proposed. Clear, transparent, and milky ice are considered glazes; opaque, kernel, feathery, and powder rime, and

enamel ice are classed as rimes. An additional classification, made of the shape of the ice deposit on stationary collectors, consists of ridged, curved, flat, grooved, and knife types. A brief section is included on effects of various elements on ice deposition. This report can be considered a preliminary Ice Atlas."—SIPRE.

In the introductory material, author notes the more important figures in the history of polar exploration, synthesizes the disasters, describes succinctly the geographic land and sea units, the ice, climate, environment and resources of the North. Part 1 (p. 37-169) contains annotated chronological lists of exploratory expeditions and research in the Western Hemisphere before 1800, during the 19th century, and in the modern period, with separate treatment of the Northwest Passage and Franklin search, the Northeast Passage and Eastern Hemisphere, and the history of aviation in the Arctic. Part 2 deals with the Antarctic. Bibliography (56 arctic items), chronological index in tabular form, and glossary of terms, p. 206-230.

*Contains* a list of five species of reptiles and five batrachians inhabiting Norway, with synonyms, critical notes and data on distribution. Includes *Lacerta vivipara* (58°-70° N., *Coluber berus* (58°-66°30' N.) and *Rana platyrhina* (58°-70°30' N.). **Copy seen:** DLC; MH-Z.

**21250. COLLETT, ROBERT, 1842-1913.** Bemaerkninger til Hr. Stejnegers gjen-svar. (Archiv for matematik og naturvidenskab, 1879. Bd. 4, p. 271-79, illus.) **Title tr.:** Remarks on the reply of Mr. Stejneger.

Contains a continuation of the discussion between the author and L. Stejneger (see his *Fremdeles om Lanius*, 1879) on the identity of *Lanius major* and *L. excubitor*, shrikes native to northern Norway. **Copy seen:** MH-Z.

**21251. COLLETT, ROBERT, 1842-1913.** Bidrag til kundskaben om Norges Gobier. (Norske videnskaps-akademi, Oslo. Forhandling, 1874, pub. 1875, p. 151-79, plate 3) **Title tr.:** Contributions to the knowledge of Norwegian species of *Gobius*.

Contains a key to the species of ichthyological genus *Gobius* and a list of nine species native to Norwegian waters, with synonyms, Norwegian and Latin diagnoses, critical notes and data on distribution. Includes *G. minutus* occurring in Tromsø and Lofoten waters. **Copy seen:** DLC; MH-Z.

**21252. COLLETT, ROBERT, 1842-1913.** Hybrids among Norwegian birds and their diagnoses. Christiania, A. W. Brøgger, 1906. 26 p. (Norske videnskaps-akademi, Oslo. Forhandling, 1905, pub. 1906, no. 11).

Contains diagnoses of eight hybrids of Norwegian birds, with dimensions and data on habits, color, plumage, food and occurrence. Includes *Lagopus lagopus* x *Lyrurus tetrix* (Tromsø, Lofoten Islands, Vesteraalen), *Lagopus lagopus* x *L. mutus* (Tromsø) and two other hybrids from Ranen, Nordland. **Copy seen:** MH-Z.

**21253. COLLETT, ROBERT, 1842-1913.** *Myodes lemmus*, its habits and migration. Christiania, A. W. Brøgger, 1896. 63 p. (Norske videnskaps-akademi, Oslo. Forhandling, 1895, pub. 1896, no. 3)

Contains an ecological study of the European lemming, distributed in Norway from 73° N. to 58°30' N. lat., with notes on early history, names, resort, habits and distribution in normal years and breeding condition in prolific years; migration: its causes, centers, direction, extent, frequency and duration; the animal's nature and habits during migration: food, enemies, diseases ("lemming fever"), great migratory years and variability. **Copy seen:** MH-Z.

**21254. COLLETT, ROBERT, 1842-1913.** Nogle bemaerkninger i anledning af Hr. Cand. L. Stejneger "Underslaegten *Lanius* med saerligt hensyn paa dens nordiske arter." (Archiv for matematik og naturvidenskab, 1879. Bd. 4, p. 180-87) **Title tr.:** Some remarks on Cand. L. Stejneger's paper "Subgenus *Lanius* with special reference to its Norwegian species."

Contains a criticism of this paper by Stejneger, 1878, q. v., dealing with systematics and geographic distribution of two Norwegian species of the avian subgenus *Lanius* native to northern Norway. Stejneger replied to Collett in his *Fremdeles om Lanius*, 1879, q. v. **Copy seen:** MH-Z.

**21255. COLLETT, ROBERT, 1842-1913.** Nogle meddelelser om naebhvalen (*Hyperoodon*), og hvidfisken (*Delphinapterus*). (Bergen, Norway. Museum. Aarbok, 1906, nr. 6, p. 1-25) **Title tr.:** Some data on beaked whale (*Hyperoodon*) and beluga (*Delphinapterus*).

Contains a study of biology, ecology and distribution of beaked whale (*Hyperoodon rostratus*) and beluga (*Delphinapterus leucas*) along the western coast of Norway, including Nordland, Tromsø, and Finnmark waters; with data on external characteristics, growth, feeding, reproduction, migration and geographic distribution. **Copy seen:** MH-Z.

**21256. COLLETT, ROBERT, 1842-1913.** Norges fugle, og deres geographiske udbredelse i landet. (Norske videnskaps-akademi, Oslo, Forhandling, 1868, pub. 1869, p. 116-93) **Title tr.:** Birds of Norway and their geographic distribution in that country.

Contains a systematic list of 248 birds, native to Norway, with data on their distribution there, and their wintering and nesting places. Includes many species, occurring in the northern provinces of Norway. A *Supplement*, q. v., was published in 1872. **Copy seen:** DLC; MH-Z.

**21257. COLLETT, ROBERT, 1842-1913.** En ny bastardform blandt Norges Tetraonider, "fjeldrype-orre" (*Lagopus mutus* x *Tetrao tetrix*). (Bergen, Norway. Museum. Aarbok, 1897, pub. 1898, nr. 7, p. 1-7, plates 1-3) **Title tr.:** A new bastard form of Norwegian tetraonid, "fjeldrype-orre," *Lagopus mutus* x *Tetrao tetrix*.

Contains a description and illustration of the new bastard of ptarmigan, *Lagopus mutus* x *Tetrao tetrix*, ("fjeldrype-orre") captured in northern Nordland (Mo) and a comparison with another bastard, *Lagopus lagopus* x *Tetrao tetrix* ("lyripe-orre").

**Copy seen:** DLC; MH-Z.

Contains a systematic list of 126 species of arachnids inhabiting Norway, with Latin descriptions of five new species, synonyms and data on distribution. Includes 25 species native to northern regions. A supplemental paper was published by E. Strand *Die Dictyniden* . . . , 1904 q. v.

**Copy seen:** DLC; MH-Z.

**21265. COLLETT, ROBERT, 1842-1913.** Remarks on the ornithology of northern Norway. (Norske videnskaps-akademi, Oslo. Forhandling, 1872, pub. 1873, p. 189-309, map)

Contains a systematic list of 209 birds, inhabiting the regions north of the Arctic Circle in Norway with data on their habits, ecology and geographic distribution. The plumage succession of a few birds (ptarmigan, grouse, etc.) is described quite extensively as well as some hybrids.

**Copy seen:** DLC; MH-Z.

**21266. COLLETT, ROBERT, 1842-1913.** Supplement til "Norges fulge og deres geografiske udbredelse i landet" (1868-70). (Norske videnskaps-akademi, Oslo. Forhandlinger, 1871, pub. 1872, p. 52-61) **Title tr.:** Supplement to "Birds of Norway and their geographic distribution in that country."

Contains additional data on geographic distribution of 50 species of birds, described in the author's *Norges fugle*, 1869, q. v., including some native to northern regions of Norway.

**Copy seen:** DLC; MH-Z.

**21267. COLLETT, ROBERT, 1842-1913.** *Synotus barbastellus* (Schreb.) og *Phoca foetida*, Müll. nye for Norges fauna. (Archiv for matematik og naturvidenskab, 1897. Bd. 19, nr. 6, p. 1-7) **Title tr.:** *Synotus barbastellus* (Schreb.) and *Phoca foetida*, Müll. new to the fauna of Norway.

Contains a record of the capture of a specimen of rough or ringed seal (*Phoca foetida*) in Vardø, Varanger Fiord, and data on its wide (circumpolar) distribution in northern waters.

**Copy seen:** MH-Z.

**COLLIER, DONALD, see Martin, P. S., & others.** Indians before Columbus. 1947. No. 24201.

**21268. COLLIER, WILLIAM ROSS, and E. V. WESTRATE.** The reign of Soapy Smith, monarch of misrule in the last days of the Old West and Klondike Gold Rush. New York, 1935. vi, 299 p., port., illus. **Copy seen:** DLC.

**21269. COLLIN, JAMES E.** A new arctic species of *Fucellia* (Diptera, Anthomyiidae) with maculated wings. Report no. 4, from the zootopographical investigation of Greenland. (Entomologiske meddelelser, 1951. Bd. 26, hefte 2, p. 187-90, illus.)

Contains a diagnosis of *Fucellia vibei* n. sp., taken at Bay Fiord (79° N. 84° W.) on the west coast of Ellesmere Island on May 15, 1940 by Ch. Vibe, with some critical notes and comparison with another related species *F. picti-*

*pennis*, recorded from the Northwest Territories of Canada, Greenland and Grant Land (northern Ellesmere).

**Copy seen:** MH-Z.

**21270. COLLINDER, BJÖRN, 1894-** . Jakagirisch und Uralisch. Uppsala, 1940. 142 p. (Uppsala. Universitet. Årsskrift 1940, no. 8) **Title tr.:** Yukaghir and Uralian languages.

Contains a comparative linguistic morphological study of Yukaghir in its relationship to the Finno-Ugric, particularly Samoyedic languages. A review is given of earlier studies, general principles of the present investigation and data on the location (Kolyma River region), number (443 by "last census"), etc., of the Yukaghirs (p. 1-19). Then follows (p. 20-108) detailed comparative treatment of the noun declension; the verb (root formation, conjugation); the pronoun; lexical studies; phonetics. Reading material in Yukaghir (from Joehelson) with German translation and comments by the author follow (p. 109-132) also notes and bibliographical data (about 45 items). The author believes that the affinities in morphology of Yukaghir and Uralic languages can be explained only by assumption of an old relationship. The Yukaghir language is pretty closely related to the Finno-Ugric and Samoyedic languages, and all together can be considered as a unit.

**Copy seen:** DLC.

**21271. COLLINDER, BJÖRN, 1894-** . Lappisches Wörterverzeichnis aus Härjedalen. Uppsala, 1943. x, 110 p. (Uppsala Universitet. Årsskrift, 1943. no. 1) **Title tr.:** A Lappish vocabulary from Härjedalen.

Contains in the introduction, suggestions on how dialectal material should be collected; then follows vocabulary of 3-4 thousand Lappish words with phonetic pronunciation and German equivalent. The Lappish material was collected in 1941. **Copy seen:** DLC.

**21272. COLLINDER, BJÖRN, 1894-** . The Lapps. New York, Princeton University Press for the American Scandinavian Foundation, 1949. 252 p., plates, maps.

Comprehensive survey (first in English since 17th century) on the basis of author's study and sojourns as linguist, among Lapps over many years. Chapters on territory of Norwegian, Swedish, Finnish, and Russian Lapps, their history, language, race and national char-

acter; material culture: clothing, dwellings, food, reindeer husbandry; religious beliefs and practices; Lappish art, music and literature. Includes an informative discussion of ancient and modern observers and studies on the Lapps, also extensive bibliography. Throughout, author indicates varying local distinctions in customs, attitudes and lore, the intermingling of Scandinavian elements with traditional Lappish culture. Reviewed by R. H. Pehrson in *Arctic*, Dec. 1950. v. 3, no. 3, p. 187-88.

*Copy seen:* DLC.

**21273. COLLINDER, BJÖRN, 1894-** . Über den Begriff der Quantität mit besonderer Rücksicht auf die lappische Sprache. (Suomalais-ugrilainen Seura. Aikakauskirja, 1928. v. 42, no. 1, p. 1-24) *Title tr.:* On the concept of quantity with particular attention to the Lapp language.

*Contains* discussion of the psychophysical conditions in language; and an attempt made to find out how far Weber's law is useful for judgment over the length of sounds. The Lapp language offers very good material for such an investigation and the author bases his paper on the data published in Frans Äimä's work *Lautlehre und Phonetik des Inarilappischen*, Helsinki, 1914. Quantity and intensity belong to the acoustic-philological category of concepts, therefore, a certain degree of subjectivity in measuring by ear is inevitable.

*Copy seen:* DLC.

**COLLINDER, BJÖRN, 1894-** , *see also* Äimä, F. G., & B. Collinder. *Zur Lautkombinationslehre*. 1928. No. 20052.

**COLLINDER, BJÖRN, 1894-** , *see also* Manker, E. M. Study preserv. Lapp culture Sweden. 1947. No. 24156.

**21274. COLLINS, HENRY BASCOM, 1899-** . Archaeological excavations at Resolute, Cornwallis Island, N. W. T. (Canada. National Museum. Annual report for 1950-51, *pub.* 1952. *In its:* Bulletin no. 126, p. 48-63, plates 7-13)

*Contains* descriptions of author's second season's work at Resolute, assisted by William E. Taylor. Most of the house ruins belonged to a rather late stage of the Thule culture, but one small house contained earlier materials, identical with early Thule-Punuk types from Alaska, and another yielded Dorset type implements.

*Copy seen:* DLC.

**21275. COLLINS, HENRY BASCOM, 1899-** . Excavations at Frobisher Bay, Baffin Island, Northwest Territories (preliminary report). (Canada. National Museum. Annual report for 1948-49; *pub.* 1950. *In its:* Bulletin no. 118, p. 18-43, incl. 9 plates)

*Contains* descriptions of ruins and excavated artifacts of Dorset and Thule cultures found, in July-Aug. 1948, at a prehistoric Eskimo site (called Crystal II after the airbase of that name) at the head of Frobisher Bay, with discussion of the age of the site; bibliography (12 items).

**21276. COLLINS, HENRY BASCOM, 1899-** . Excavations at Thule culture sites near Resolute Bay, Cornwallis Island, N. W. T. Preliminary report. (Canada. National Museum. Annual report for 1949-50, *pub.* 1951. *In its:* Bulletin no. 123, p. 49-63, plates 9-16)

*Contains* description of three former Eskimo dwelling sites excavated by the author (Smithsonian Institution) assisted by J. P. Mischea (National Museum of Canada) near the weather station at Resolute in 1949. The material recovered (1100 specimens) was typically Thule culture, much of it similar to that from northwestern America (Thule-Punuk sites in Alaska). Few stone but various metal-bladed implements were found. Animal bones show seal to have been the principal food supply of the Eskimos formerly on this island. The age of the houses is believed to be not more than a few centuries.

**21277. COLLINS, HENRY BASCOM, 1899-** . The origin and antiquity of the Eskimo. (Smithsonian Institution. Annual report for 1950, *pub.* 1951. p. 423-67, illus., plates). Reprinted, with the addition of a map, in Yearbook of Physical Anthropology 1951, vol. 7, Wenner-Gren Foundation for Anthropological Research, Inc., 1953, pp. 75-123.

Following a survey of various theories (and their exponents) on the North American or Asiatic origin of the Eskimos, author summarizes recent archeological discoveries and their implications. Prehistoric Eskimo cultures: Thule, Cape Dorset, Birnik, Old Bering Sea, Punuk and Ipiutak, are sketched briefly and their relationships indicated. On the basis of excavations in Alaska and Siberia, cultural analogies are shown between prehistoric North American

Eskimos and early Neolithic peoples of Lake Baykal and the Mesolithic peoples of northern Europe. In summary author postulates later Neolithic peoples, moving from east-central Asia down-river to the arctic coast, "developed the rudiments of a maritime culture which found its fullest expression among the Eskimos" in the Bering Strait area. The data of physical anthropology and linguistics are summarized from the viewpoint of their evidence on the Eurasiatic origin of the Eskimo. Previous theories deriving the Eskimos from a North American Indian stock, based solely on metrical resemblances between certain Eskimo and Indian groups, some of whom are mixed bloods, are criticized along with the theory that the Eskimo skull form is the result of functional adaptation. Recent finds by Giddings and others in Alaska of the "Denbigh Flint Complex", pre-dating known Eskimo remains, are discussed in relation to the problem of early man in America also to Eskimo archeology. Bibliography, p. 462-67. Expanded from a paper prepared for *Encyclopedia arctica*. **Copy seen:** DLC.

**21281. COMITA, GABRIEL W.** *Cyclops magnus* from Amchitka, Alaska. (Hydrobiologia, 1952. v. 4, no. 4, p. 337-40, illus.)

Contains data clarifying the status of a cyclopoid copepod, *Cyclops magnus*, some specimens of which were taken from a tundra seepage-pool on Amchitka Island in the Aleutians; measurements from these specimens are presented. Summary in Italian. **Copy seen:** DGS; MH-Z.

**21282. CONIBEAR, FRANK.** The beaver's lodge. (Beaver, Sept. 1951. Outfit 282, no. 2, p. 36-37, diagrs.)

Contains "little known facts about beaver architecture . . . by a trapper of thirty years' experience." Author describes site, materials, lay-out, structure, and use of the beaver lodge, noting also other animals (muskrat, mink) which frequent it.

**Copy seen:** DSI-M.

**21283. CONLEY, C. LOCKARD, and J. L. NICKERSON.** Effects of temperature change on the water balance in man. (American journal of physiology, Mar. 1945. v. 143, no. 3, p. 373-84, 2 fig., 8 tables)

Contains a study on three pairs of adult males, each pair being under constant observation for about a week, half of this period under low, and half under high environmental temperature. The extrarenal water loss was quite constant during any period of uniform temperature; upon change of ambient temperature, extrarenal water loss and skin temperature attained new levels; there was no evidence of slow acclimatization. On exposure to cold, plasma volume was reduced; exposure to heat caused a prolonged increase

of plasma volume. Renal excretion of sodium and chloride seemed to reflect the difference between the intake of these substances and the loss in the sweat. Bibliography (11 items).

**21284. CONRAD, V.** Polygon nets and their physical development. (American journal of science, Apr. 1946. v. 244, p. 277-96, illus., 2 plates)

"There are 3 hypotheses explaining the formation of soil structures: (1) B. Högbom's, the pushing forces of freezing water; (2) O. Nordenskjöld, A. R. Low, and K. Gripp who consider convectional currents in a stratified soil with an instability caused by temperature differences; and (3) H. Steche's, stressing colloidal properties of the soil and the consequent swelling forces. There is evidence that freezing processes account for the formation of stone rings and that the clay spots, forming the nuclei for new rings are entirely dependent upon their homogeneity. Hence, there is a tendency toward a certain amount of regularity. Thirty-seven polygons, quadrangles, pentagons, hexagons, and heptagons were surveyed and their angles and frequency distribution were tabulated statistically. The quasi-regularity of stone nets could be verified from these calculations."—SIPRE. Bibliography (23 items).

**21285. CONSTANTINI, OTTO.** Durch Finnland und Lappland ans Nördliche Eismeer. München-Solln, Herold-Verlag, 1942. 159 p., 116 illus. on plates, 6 maps. *Title tr.:* Through Finland and Lapland to the arctic sea.

Contains account of the author's trip accompanied by his wife "shortly before the war," first pub. in 1941, this second (1942) edition having an added chapter on Vipuri (Viborg). The itinerary is given with a description of the country traversed, and the people, their life, habits and occupations. Landing at Helsinki the author proceeded by train to Lahti and thence to Rovaniemi, "the capital of the Lapps." From here he continued northward by bus along the Arctic Road to the coast, making numerous stops and side-trips to study the various groups of Lapps. These are described in detail and the account rounded out by chapters from the literature on the history, culture, race, economy of the Finns and Lapps. A short list of these sources, and other works by the author are listed p. 7-8.

Based on data collected on the Cambridge Expedition to West Finnmark in 1947. Calcicolous communities of plants are those growing on "soils of high base status" or "calcareous soils," especially on the dolomite outcrops near Talvik (about 70° N. 23° E.) on Alten Fiord and in the Porsangerfjord region to the northeast. Communities on well-drained, wet and other soils are described, with discussion of the calcicolous habitat; peat formation on or near calcareous areas is discussed and the resultant restriction of calcicolous flora. Bibliography (27 items). **Copy seen:** DLC.

**21290. COOPER, JOHN MONTGOMERY, 1881-**. The northern Algonquian supreme being. Washington, D. C., 1934. 78 p. (Catholic Univ. of America. Anthropological ser. no. 2; also pub. in Primitive man, 1933. v. 6, nos. 3-4, p. 41-111)

Contains field data (p. 4-44) on beliefs and rites collected by the author mainly in 1933 among Cree-speaking Indians of the west coast of James Bay (Attawa-

piskat, Albany, Moose and Keskami Rivers), together with similar material from Montagnais-speaking Indians of the Eastmain River (east Hudson Bay) and Labrador, the last collected by W. D. Strong while with the Rawson-Mac-Millan Expedition of 1927-28, in the region of Nain. Author analyzes these data to find the extent of Christian influence (profound since 1840) on aboriginal beliefs and practices, (and incidentally gives a brief but efficient historical sketch of explorers' and missionaries' activities in the area). He characterizes the persisting concept of the supreme being and practices associated therewith, as conforming to Indian and non-Christian patterns rather than Christian ones. Algonkian and Ojibway influence on the theism of these Bay Indians is dismissed. **Copy seen:** DLC.

**21306. CRARY, ALBERT P., and others.** Preliminary report on scientific work on "Fletcher's Ice Island", T3. (Arctic, Dec. 1952. v. 5, no. 4, p. 211-23, incl. illus., graphs) Other authors: R. D. Cotell and T. F. Sexton.

"T3 is an ice island in the Arctic Ocean on which a permanent campsite was erected in 1952 for scientific operations. The investigations, other than meteorological, in progress from April 1-Oct. 1, included studies of the physical structure of the island, the movement of the island and the ice pack, seismic profiling and other miscellaneous data. T3 is 31 mi. in circumference and has a minimum width of 5 mi. A 52-ft. hole was dug in which 58 dirt layers were found, the contents of which were weighed and microscopically examined. Lakes appeared in the hollows during the thaw period (late June to mid-Aug.). A map presents the track of T3, indicating the changes of island azimuth to true and magnetic north and the geographical longitudes. A tentative ice thickness of about 160 ft. was obtained through seismic soundings of the ice and the ocean bottom. Ocean depths ranging from 5000-12,000 ft. were obtained."—SIPRE. Samples of surface dirt, flora and fauna were collected, including large

boulders of granitic rock, plant fragments (stems, leaves, blossoms), mollusc shells, fishbones, caribou antlers, etc. A few birds and bear and arctic fox tracks were seen. Continuing research on T-3 is indicated. *Copy seen:* DLC.

**21307. CRAWFORD, H. D.** Alaska can ease our newsprint shortage. (American forests, 1951. v. 57, no. 11, p. 6-9, 46, 48, illus., map)

*Contains an account of the present paper shortage and its causes. The first Alaska paper mill (producing pulp for cellophane manufacture), conditions for additional paper mills, especially for newsprint, transport and communications of the proposed area, are described with outline of the new paper mills in southern U.S.A.* *Copy seen:* DA.

**21311. CRISMON, J. M., and F. A. FUHRMAN.** Studies on gangrene following cold injury, IV. The use of fluorescein as indicator of local blood flow: distribution of fluorescein in body fluids after intravenous injection. (Journal of clinical investigation, Mar. 1947. v. 26, p. 259-67, 5 fig.)

*Contains an account of experiments with normal rabbits, intravenously injected with fluorescein, in order to study its distribution in the blood and body fluids, the extent of its penetration into cells, and the factor influencing fluorescein equilibrium. Data are offered on the time, and circumstances when maximum concentration is reached in various regions of the body. There was no evidence in skeletal muscle that the dye penetrated the intracellular phase, though surface absorption may have taken place on erythrocytes, in vitro. Bibliography (12 items).*

*Copy seen:* DLC.

**21312. CRISMON, J. M., and F. A. FUHRMAN.** Studies on gangrene following cold injury, V. The use of fluorescein as an indicator of local blood flow: fluorescein tests in experimental frostbite. (Journal of clinical investigation, Mar. 1947. v. 26, p. 268-76, 3 fig.)

*Contains a study of distribution of intravenously injected fluorescein in frost-bitten and normal ears of rabbits. Both the dye's entrance into, and exit from the injured regions were slower, the maximum intensity lower, than in the controls; the exchange of dye also became progressively slower after injury. Procaine blockade of the stellate ganglion caused earlier and higher maxima of fluorescence in the damaged ears than in controls. Edema fluid showed twice as great concentration of fluorescein as the blood. The problem of impaired dye-exchange in the damaged area due to development of stasis in the true capillaries, is discussed. Bibliography (10 items).*

*Copy seen:* DLC.

**21313. CRISMON, J. M., and F. A. FUHRMAN.** Studies on gangrene fol-

lowing cold injury, VI. Capillary blood flow after cold injury, the effects of rapid warming, and sympathetic block. (Journal of clinical investigation, May 1947. v. 26, p. 468-75)

Contains a report on a microscopic study of blood-flow in the ears of rabbits during the first hour after freezing; also in ears treated by rapid thawing and by procaine blockade. Paralysis of vasomotor activity was produced in the frozen regions. After thawing in air of 25° C. blood flow was reestablished and all vessels became dilated; stasis began in the true capillaries with the return of blood flow and was complete in ten minutes. Rapid thawing in warm water (42° C.) delayed the development of stasis until maximal swelling was reached in about two hours; procaine block also delayed the onset of stasis by 50-60 minutes. Information is also offered on: blood flow in arterio-venous anastomoses and arteriolar-venular capillaries; lymph flow; interstitial fluid formation, etc. Bibliography (25 items). **Copy seen:** DLC.

**21314. CRISMON, J. M., and F. A. FUHRMAN.** Studies on gangrene following cold injury, VIII. The use of casts and pressure dressings in the treatment of severe frostbite. (Journal of clinical investigation, May 1947. v. 26, p. 486-96, 2 fig.)

Contains a report on experiments with casts and pressure dressings, and combinations of these with rapid warming. The best results were obtained by rapid warming followed by cast applied before swelling occurred, or by pressure dressings applied after maximum swelling. Casts and pressure dressings alone produced "significantly favorable results." Multiple incisions through the damaged skin, maintenance of low temperature, pulsating pressure, etc., were of doubtful value or ineffective. Bibliography (17 items). **Copy seen:** DLC.

**21319. CYRIAX, RICHARD JULIUS.** The position of Victory Point, King William Island. (Polar record, July 1952. v. 6, no. 44, p. 496-507, illus., map)

Contains an extensively documented study on the position of Victory Point (69°37'49" N. 98°40'49" W.), first visited by Sir James Clark Ross in 1830. For many years it was considered as the place where members of Franklin's last expedition under Captain Crozier encamped after abandoning ship in April 1848 and left records. Author comes to the conclusion that the Point is in all probability a headland about three miles to the north of the place where Crozier landed. *Copy seen:* CaMAI; DLC.

**21320. CYRIAX, RICHARD JULIUS.** Recently discovered traces of the Franklin Expedition. (Geographical journal, June 1951. v. 117, p. 211-14, map)

Contains discussion of the relics reported by Royal Canadian Mounted Police Inspector H. A. Larsen who inspected the coast of King William Island, between Cape Felix and Cape Franklin in Aug. 1949; with many references to the proceedings of Sir John Franklin's expedition of 1845-47 and to some of the

search expeditions. Bibliographic footnotes.

*Copy seen:* DGS; DLC.

**21321. CYRIAX, RICHARD JULIUS.** Sir John Franklin's last arctic expedition; a chapter in the history of the Royal Navy. London, Methuen & Co., 1939. xviii, 222 p., 4 maps (3 fold.)

On the basis of published and mss. records (among the latter especially Admiralty documents and journals, etc., of McClintock), the author presents an exhaustive and extensively documented account of Franklin's voyage of 1845-47. He includes a discussion of the Northwest Passage, pre-Franklin efforts to discover an ocean-to-ocean route through Canadian arctic waters, and the search for Franklin after 1849. Here he concentrates on the information, relics, etc., discovered by the various searchers rather than on their incidental geographic explorations, and he stresses McClintock's finds in Simpson Strait which proved that some of Franklin's people had discovered a passage but died before traversing it. The organization, personnel with biographic data, provisions, etc., of Franklin's expedition are given in detail, and its movements traced on the basis of the sparse evidence remaining, no journals or log books having been recovered. Appendices on (1) monuments, graves and relics (2) biographies of junior officers close the volume. *Copy seen:* DLC.

**21322. CZAPLICKA, MARIE ANTOINETTE, d. 1921.** Aboriginal Siberia, a study in social anthropology with a preface by R. R. Marett. Oxford, Clarendon press, 1914. xiv p., 1 l., 374 [2] p. 16 plates, 2 fold. maps.

Before personally investigating conditions in the country itself, the author prepared a comprehensive and concise handbook for the study of the anthropology, based mainly (and therefore more informative in some areas, less in others) on results of Russian scientists' and explorers' field work. She gives a sketch of the geography and survey of native peoples (with 1897 census data) including Chukchis, Koryaks, Kamchadals, Eskimos, Aleuts, Yukaghirs, Chuvantay, Yenisey-Ostyaks, Finnic tribes (Ugrian Ostyaks and Voguls), Samoyedic tribes, Yakuts, Tungusic tribes. In chapters on social organization, marriage, birth and death customs and beliefs (p. 23-165); on shamanism (p. 166-206) and on arctic hysteria (p. 307-325), the data available

are arranged according to tribe or area. A bibliography of about 200 Russian and 150 other works is added.

**Copy seen:** DLC.

**21323. CZAPLICKA, MARIE ANTOINETTE, d. 1921.** My Siberian year. London, Mills & Boon, [1916] xii, 315 [1] p. front. 32 plates, fold. map.

Narrative of the author's thirteen-month expedition in 1914-15, with an English party of four from Leningrad by railway to Krasnoyarsk, thence up the Yenisey by steamboat to Yeniseysk, then down the river to its mouth; the summer months spent in the tundra region around Golchikha, a sojourn at Turukhansk, the wintering among the Tungus in the stony tundra north of Nizhnyaya Tunguska River. Author comments on characteristics of Yakuts, Samoyeds, Yeniseians, met during her travels, describes in more detail with many illustrative anecdotes, customs of the Tungus in reindeer husbandry, marriage, hunting and fishing, social organization and law, religion, shamanism. She discusses the "Sibiriaks," colonists of European ancestry, also recent Russian migrants to Siberia (traders, exiles, etc.) and remarks throughout on native practices as affected by European influences as well as traditional customs. At the end is an historical account of Siberia as a Russian colony and a glossary of (mainly) Russian and Tungus terms. Plates are (mainly) photographic illustrations of northern Siberian natives.

**Copy seen:** DLC.

**21324. CZAPLICKA, MARIE ANTOINETTE, d. 1921.** Ostyaks. (*In:* Hastings, James, ed. *Encyclopaedia of religion and ethics*, 1917, v. 9, p. 575-81)

*Contains* note of three different tribes of northwestern Siberia: the Ugrian, "Samoyedic," and "Yenisey" Ostyaks, together numbering about 24,000; the second group actually Samoyed, and the last a small group, actually Yeniseians, linguistically and probably racially distinct from the others. The Ugrian Ostyaks (17,000 in 1897) are discussed as to origin, area (Ob'-Irtysh basin), their heroic period, later history and conquest, their material culture with economic and physical deterioration as Russian colonization advances; social customs, religious lore, beliefs and shamanism. The Yeniseians are likewise described, their admixture with Russians and others in modern times and their de-

terioration noted. Social and material culture (briefly), religion (in detail) and shamanistic practices and accoutrements are discussed.

**Copy seen:** DLC.

**21325. CZAPLICKA, MARIE ANTOINETTE, d. 1921.** Samoyed. (*In:* Hastings, James, ed. *Encyclopaedia of religion and ethics*, 1921, v. 11, p. 172-77)

*Contains* a survey of Ural-Altaic tribes living along the coast from Cheskaya Bay eastwards to the Khatanga, numbering about 20,000, and divided into Ostyak or Forest Samoyeds, and Yenisei or Eastern Samoyeds. Both groups are described as to their language, origin, physical type, cultural type (reindeer-breeding, nomadic life); their religious beliefs and practices; mythology and folklore.

**Copy seen:** DLC.

**21326. CZAPLICKA, MARIE ANTOINETTE, d. 1921.** Siberia, Sibiriaks, Siberians. (*In:* Hastings, James, ed. *Encyclopaedia of religion and ethics*, 1921, v. 11, p. 488-96)

*Contains* an outline of the region: origin of its name, its geographical position, exploration, and classification of its inhabitants; remarks on the Paleo-Siberians and their cultural affinity with Northwest Amerinds; the Chukchi country and people (about 12,000 living in the far northeast of Siberia from the River Indigirka to Bering Strait on the east, and to Anadyr' River in the south). Their physical characteristics, economy, material culture and social organization, religious beliefs and practices are treated briefly but specifically, cultural elements derived from or related to Eskimos, or Northwest American Indians are noted.

**Copy seen:** DLC.

**21327. CZAPLICKA, MARIE ANTOINETTE, d. 1921.** Tungus. (*In:* Hastings, James, ed. *Encyclopaedia of religion and ethics*, 1922, v. 12, p. 473-76)

*Contains* comprehensive outline of this mongoloid (?) people, numbering about 75,000 in 1911, living in small groups throughout Siberia from River Taz in the west, to Sakhalin Island in the east, from the arctic coast southward and to the middle of Manchuria. The northern Tungus are at the stage of reindeer culture although they know the use of iron. The southern Tungus are horse nomads, cattle-breeders, and fishermen, in some places agriculturists. They represent a case of degeneration under the influence of environment. Author

treats area, distribution, number and history; linguistics, physical type, skills and crafts: fur tents, horse- and also reindeer buck-riding, tattooing, decorated aprons, birch-bark canoes. Social culture and religion are discussed: clans, marriage, birth, burial, initiation of a shaman, his clothes and drum; gods and spirits: animism, sacrifices, animal worship.

**Copy seen:** DLC.

**21328. CZAPLICKA, MARIE ANTOINETTE, d. 1921.** Yakut. (In: Hastings, James, ed. Encyclopaedia of religion and ethics, 1922. v. 12, p. 826-29)

Contains an account of this branch of the Turcic race numbering about 245,000 in 1912 and living in north-central Siberia, along the Lena, reaching the Amur and Sakhalin in the south, and as far northwest as the Yenisey. Their distribution, physical type, horse- and reindeer-breeding culture and seasonally nomadic life, are noted. Northern Yakuts are hunters, fishermen and reindeer-breeders. They understand the smelting of iron and are the cleverest traders in northern Siberia. Their social organization, religious customs and shamanism are described and their folklore, the richest of all Siberian natives.

**Copy seen:** DLC.

**21329. CZEKANOWSKI, JAN.** Zur Anthropologie der Ugrofinnen. (Suomalais-ugrilainen seura. Toimituksia. 1933. no. 67, p. 65-71) **Title tr.:** On the anthropology of Ugro-Finns.

Contains an account of racial affinities on basis of physical characteristics. The Lapps and Samoyeds are brachycephalic, the Finns midway between Lapps and Swedes in regard to skull index. The paleo-asiatic race is best represented among the Ostyaks. Voguls show strong influence of the arctic anthropological type, although the paleo-asiatic race components are prevailing. Typical representatives of the arctic race are the Eskimos. The Zyryans show many elements of nordic and lapponoid races which overshadow their paleo-asiatic anthropological type. The most typical representatives of the lapponoid race are the Samoyeds and the Lapps living on the arctic shore of Kola Peninsula. The Scandinavian Lapps, having now some nordic racial influence, may be considered as ugro-finnized Samoyeds.

**21332. DADYKIN, V. P.** Nekotorye opyty po peredvizheniiu vody v merialoi pochve. (Pochvovedenie, Sept. 1952. no. 9, p. 794-801, diagr., tables) **Title tr.:** Some experiments on the movement of water in frozen ground.

Contains a report on experiments de-

signed to test the possibility of plants being able to take up water directly from frozen ground. Vetch seeds were placed directly into holes drilled in frozen ground and covered with it, or into clay, sand, etc., kept at various, below-freezing temperatures, or into ice blocks kept under similar conditions. There was swelling and gain in weight of the seeds placed in frozen ground, suggesting a possibility of movement of water in frozen ground and an uptake of it by the seeds. Whether in this and in the other media, the water was taken up directly from the ice crystals could not be ascertained. Bibliography (5 items).

**21345. DALE, GEORGE A.** Northwest Alaska and the Bering Sea coast. (*In*: Sanders, I. T., ed. *Societies around the world*, 1952, p. 111-130)

Contains a sketch of the process of Eskimo acculturation as noted during 1935-49 by this officer of the Alaska Native Service: changes in the fishing and hunting techniques, new forms of dwellings and domestic utensils such as lamps, stoves; mixture of the old type skin clothing with imported commercial garments; transport by aircraft as well as dog team and umiak. Eskimos' skill with automotive equipment and their employment by whites, use of English language, developments in schools, etc., are outlined. Changes in social organization: behavior problems resultant from contact with the whites (rise in tuberculosis, illegitimacy, etc.) are noted. Community organization in native villages, social control, attitudes and beliefs are characterized under the rapid expansion of the present-day Alaskan economy.

**21346. DALE, ROBERT F.** Alaska co-operative weather observer. (Alaskan agriculturist, June 1951. v. 3, no. 2, p. 20-22, graph)

"Synoptic reporting network in Alaska is described, and the cooperative observer network and its purpose are outlined. A series of frequency curves are presented, which show chances of spells of dry weather of 3, 5 or more days in June-October based on 31 years of record at Palmer, Alaska, as an example of the possible uses of such data as are collected daily by 34 unpaid cooperative observers of Alaska. Names of observers at each station are listed, one with 20 years of service."—*Meteorological abstracts and bibliography*, Apr. 1952. v. 3, p. 317.

**21347. DALGETY, CHRISTOPHER THOMAS, and P. SCOTT.** A new race of the whitefronted goose. (British Ornithologists' Club. Bulletin, May 1948. v. 68, p. 109-121, illus., 2 plates)

Contains detailed notes on characteristics, especially of bill color, of *Anser albifrons* and proposal of a new race, *A. a. flavirostris*, for the goose which nests on West Greenland and winters in Ireland.

**Copy seen:** DSI-M.

**21348. DAL'NE-VOSTOCHNYY KRAY. ISPOLNITEL'NYĖ KOMITET SOVE-TOV.** Dva goda raboty Dal'ne-Vostochnogo kraevogo ispolnitel'nogo komiteta Sovetov RKK i KD za 1926/7-1927/8 g g.; materialy k otchetu 3-mu kraevomu s'ezdu Sovetov. Pod. red. P. I. Neznakhina, M. P. Kopytina, P. A. Shishl'annikova. Khabarovsk, 1929. xii, 401 p., diags. **Title tr.:** Two years' work of the Far-Eastern executive committee of the Soviets of RKK and KD, for 1926/7-1927/8; materials for the Report before the 3d district convention of the Soviets. Edited by P. I. Neznakhin [etc.]

Contains an extensive collection of data on developing the economy of this area including its northern parts, particularly under the heads: forests and timber industry, fisheries and canning, hunting and fur protection. In addition, problems common to all parts of the area are discussed, such as names, trade, communications, socio-cultural development.

**Copy seen:** DLC.

**21349. DAL'NE-VOSTOCHNYY KRAY. SOVET NARODNOGO KHOZĖISTVA.** Materialy rabot 1-go plenuma Dal'ne-Vostochnogo kraevogo soveta narodnogo khozĖistva (13-18 apreĖa 1929 g.) Khabarovsk, Izd. P.E.U., DKSNNK, 1929. 101 p., tables. **Title tr.:** Materials on the activities of the first plenary of the Far Eastern Soviet of National Economy (April 13-18, 1929).

Contains, in addition to reports on the previous year, and as the larger portion of the book, an outline of the 5-year plan (1928-33) for the development of the economy of the Far East. Includes in data on such industries as fur production, forest and timber products, fisheries and canning, materials on the northern regions.

**Copy seen:** DLC.

**21350. DAL'NE-VOSTOCHNYY KRAY. "During cruises in Arctic and northern waters and in SW. North Atlantic numerous observations of dry and wet bulb temperature were made at 0-30 ft. above sea. These are set out in detail with associated wind and weather. Mean profiles of temperature and vapor pressure are shown graphically. The theory of evaporation is set out and Montgomery's 'evaporation coefficient' and rate of evaporation are calculated for unstable and stable, rough and smooth conditions, from vapor pressure at 0 and 20 ft. Results are erratic but in general agreement with theory."—*Meteorological abstracts and bibliography*, Nov. 1952. v. 3, no. 11, p. 1159.

*Journalist's account in three parts, with photographic illus., of bases developed in the North American Arctic during and since World War II, particularly the "outposts" consisting of weather station and airstrip at Mould Bay (Prince Patrick Island), Isachsen (Sverdrup Islands), Eureka Sound and Alert (Ellesmere Island) and Nord (North Greenland.) The first part outlines "Operation Nord", the construction of the newest of these, the joint Danish-U. S. installation at Nord on Princess Dagmars Peninsula in Peary Land which the author and the photographer, Lew Merrim, as Colliers' personnel visited. The second part called "Our sub-zero heroes" describes conditions of life at these outposts, outlines the development of these joint stations in Canada and Greenland as the Arctic Project of the U. S. Weather Bureau, and pays tribute to Charles Hubbard who initiated the project. Hubbard's work establishing airfields on the route across northern Canada-Greenland-Iceland to Britain during World War II is sketched. (See also Polar record July 1951. v. 6, no. 42, p. 280).*

*The third part, called "Outpost, alert at 'Alert'" deals with the activities, personnel and daily life at this station.*

Institut etnografii. Trudy, novaiia seriia, t. 17) **Title tr.:** Anthropological investigations in the Kamchatka Oblast. Northeastern Expedition, Proceedings I.

*Contains* an account of the work conducted by the Northeastern Expedition in Kamchatka from March 1947 through the summer of 1948 on the reindeer-breeding Koryaks, the Itelmens (Kamchadals), Lamuts (Tungus), and the Russian-speaking people. The findings are compared and integrated with the same expedition's work on the Chukotsk Peninsula and vicinity commenced earlier (1945), and with its work in the Amur estuary, also with craniological material from various Russian museums. The aim of the whole project was to elucidate the "genetic relationship of the physical types of the so-called Paleo-Asiatic people (including the Eskimos and Ainus)" and to compare them with other types from Asia and America, and with ancient types. The account includes sections on: the material (p. 5-9); ethnogeographical differentiation of specific characters: pigmentation, hair, face, nose, etc. (p. 10-58); the problem of classification of the mongoloid types of northern Asia (p. 63-118). An appendix (p. 123-258) contains tabulated data concerning the somatology and craniology of material from Siberia, American, non-Russian Asia, etc. Arctic peoples dealt with in the tables include: Aleuts, Tlingits, Eskimos, Chukchis, Koryaks, Itelmens, "Kamchadals," Yukaghirs, Lamuts, old Russian

**21379. DEBETS, G. F.** Antropologicheskoe issledovanie na Kamchatke; predvaritel'noe soobshchenie. (Akademiia nauk SSSR. Institut étnografii. Kratkie soobshcheniia, 1949. t. 5, p. 3-18) **Title tr.:** Anthropological study in Kamchatka; preliminary information.

Contains an account of the results of an expedition in Jan.-June 1947, organized by Institute of Ethnography. The party started from the village Markov on the Anadyr' River, proceeded to the seashore on Penzhina Bay, thence southward along Kamchatka Peninsula to the village of Khairûzovo. Anthropological measurements were made of 40 Chukchis, 201 Lamuts, 614 Koryaks, 175 Itelmens (a Kamchadal group), 165 Kamchadals, and 181 old Russian settlers (starozhily). The author gives an anthropological characterization of each group, tables with measurements, and stresses the tasks for further investigations.

**21380. DEBETS, G. F.** Paleoantropologiya SSSR. Leningrad, 1948. 392 p. illus., diagrs., maps. (Akademiia nauk SSSR. Institut étnografii. Trudy, 1948. Novaya seriia, t. 4) **Title tr.:** Paleoanthropology of the U.S.S.R.

Contains on p. 155-56 notes on excavations made by S. V. Shmidt on Bol'shoy Oleniy Island near the Murmansk coast: the graves belong to the transition from the Arctic "neolith" to the "neo-metallic" epoch (about 1000 B. C.); two male and three female skeletons were excavated. They were thoroughly investigated by S. D. Sinitsyn in 1930, who concluded from the form of skull, that the early inhabitants of this island (69°13' N. 33°29' E. in Kola Bay) were very close to the recent Lapps.

**21381. DEBETS, G. F.** Proiskhozhdenie korennykh naseleniia Ameriki. (Akademiia nauk SSSR. Institut étnografii, Trudy, 1951. Novaya seriia, t. 16, p. 323-38) **Title tr.:** The origin of the native population of America.

On the basis of linguistic, ethnographic and anthropological considerations, the author concludes that America was settled via the Bering Sea area some 10-25

thousand years ago by people of a Mongoloid type; some groups claimed to be of Oceanic origin also entered America through the Bering Sea, according to the author. A settlement directly from the Pacific Ocean, if it took place, was only on a very small scale and occurred relatively late. Bibliography (14 items).

**Copy seen:** DLC.

**21382. DEBETS, G. F.** Races néolithiques de la Sibirie orientale. (Antropologicheskii zhurnal, 1930. t. 19, vyp. 1-2, p. 49-50) **Title tr.:** The neolithic races of Eastern Siberia.

Contains results of author's investigation on neolithic skulls excavated in the district of Irkutsk during 1880-1927. Conclusions: there are five types of male skull and four types of female; the neolithic population was composed of two different elements; the so-called Baicalian type was found in the Tungus graves of the iron age in the Transbaykalia region; the Uralian (Voguls and Ostyaks) and North-American types form the Paleo-Siberian (Mongoloid) race.

Contains a study of this lichen living as epiphyte on spruce and birch in Norway, in connection with an investigation of the problem of glacial survival of spruce in Scandinavia; based on material from Nord-Trøndelag and Nordland.

**Copy seen:** MH-A.

**21387. DEGELIUS, GUNNAR NILSSON.** Das ozeanische Element der Strauch- und Laubflechten-Flora von Skandinavien. Inaugural-Dissertation. Uppsala, Almqvist & Wiksell, 1935. xii, 411 p. illus., diagr., 4 plates, text maps. (Acta phytogeographica suecica, 7) **Title tr.:** The oceanic element in the flora of the fruticose and foliose lichens of Scandinavia. An inaugural dissertation.

Contains a discussion of the concept of the "oceanic element" in the study of the fruticose and foliose lichens of Scandinavia, a survey of oceanic elements in the flora of Europe and especially of Scandinavia. 22 lichens of the oceanic group in Europe are enumerated with data on distribution in Scandinavia, Europe and outside of Europe, vertical distribution and variability (p. 36-186). The types of distribution in Europe,

Scandinavia and throughout the world are presented (p. 187-282), with explanation of the distribution (p. 233-305). Scandinavian localities, including those in Swedish and Finnish Lapland and northern Norway, given for 22 oceanic lichens enumerated (p. 306-370). Bibliography (about 800 items) and index of species.

**21391. DELACOUR, JEAN THEODORE, 1890-** . Preliminary note on the taxonomy of Canada geese, *Branta canadensis*. New York, 1951. 10 p. (American Museum of Natural History, N. Y. American museum novitates, no. 1537)

Discussion of present limitations to knowledge of breeding places, fly-ways, interbreeding and other habits, and a list of twelve (including with descriptions, three new) subspecies of the Canada goose, which occur throughout the North American Arctic and the east coast of Siberia. **Copy seen:** DGS; DSI-M.

**21392. de LAGUNA, FREDERICA, 1906-** . A pottery vessel from Kodiak Island, Alaska. (American antiquity, 1939. v. 4, no. 4, p. 334-43, 2 plates)

Contains description (and illus.) of a pot, found near Three Saints Bay by a local Eskimo; this vessel 31 cm. high was used for cooking; it is the finest example of Eskimo pottery known to the author; it was built up by patch modeling. Pottery of the surrounding area (Eskimo and Aleut, of which finds are very rare) is surveyed, also other scientists' finds in other areas. Eskimo pottery can be divided into three main groups: southern (age as yet undetermined), ancient northern, and modern northern. This unique pot from Kodiak must be assigned to the southern group. Bibliography. **Copy seen:** DLC.

**21393. de LAGUNA, FREDERICA, 1906-** . Preservation of archeological and ethnological material in Alaska. (In: Alaskan Science Conference . . . 1950. Selected papers, 1952. p. 52-59)

Contains an outline of the Preservation of American Antiquities Act (1906); its application in Alaska where rate of transformation of aboriginal culture is recently accelerated and need for preserving remains is acute. Sources of damage to cultural remains (particularly of Es-

kimos) are indicated, critical areas (where money economy prevails) noted, and suggestions are made towards program of effective salvaging of records of native life. **Copy seen:** DAI, DLC.

**21394. de LAGUNA, FREDERICA, 1906-** . Some dynamic forces in Tlingit society. Albuquerque Univ. of New Mexico Press, 1952. 12 p. (Southwestern journal of anthropology, Spring 1952. v. 8. no. 1)

Author analyzes and evaluates the three groups of factors which determine the structure of the communities and the orientation of the individual: factors of territory, kinship and class. Organization based on kinship is most important and through it territorial and class differences are manifested. The organization into moieties, sibs, subsibs, etc., is outlined and its effect upon social and individual behavior patterns traced. Similarly an analysis of family bonds and organization is given, with notes on the position of children in the sib, and on joking, festivals, etc. The data on which this paper is based was gathered by the author and Dr. Catharine McClellan among the northern Tlingits of Alaska on an ethnological and archeological expedition, supported by the Arctic Institute of North America with funds of the Office of Naval Research and several other agencies. Bibliographical footnotes. **Copy seen:** DAI; DSI.

**21395. de LESSE, HUBERT.** Coléoptères du Groënland. Expédition Polaire Française. Zoologie, 3e. note. (Entomologiste, Mai-Juin 1950, t. 6, no. 3, p. 73-76) **Title tr.:** Coleoptera from Greenland. French Polar Expedition. Zoology, 3d note.

Contains information on the way the collecting was done (summer 1949), the nature and surroundings of the locality at Ege (rising from the sea to the inland ice, at about 69°45' N. on the West Greenland coast), and the biotopes the beetles are living in. This is followed by an account of seven species found, with date, location and substrate of the find. **Copy seen:** DSI-M.

**21396. de LESSE, HUBERT, and others.** Expéditions Polaires Françaises, Missions P. É. Victor. Zoologie, 5e note, 1951. (Société entomologique de France. Bulletin, Avril 1951, t. 56, p. 53-61, illus., tables) **Other authors:** R. Strenzke and A. Thienemann. **Title tr.:** French

Polar expeditions (Missions of P.-É. Victor) Zoology, 5th note, 1951.

Contains a description of the material collected by the senior author on the west coast of Greenland in 1949. Nine forms of terrestrial chironomides (midges) are described by Strenze, mostly the larval stages; a reconstruction of their distribution in Europe is attempted; ecological notes on the localities where the finds were made is attached. Bibliography (8 items).

**Copy seen:** CaMAI; DSI.

**21397. de LESSE, HUBERT.** Notes zoologiques et botaniques sur l'ouest du Groenland. Expéditions polaires françaises, missions P.-É. Victor. (Terre et la vie. Oct.-Dec. 1950. v. 20, no. 4. p. 175-201, 3 plates, table) **Title tr.:** Zoological and botanical notes from western Greenland. French Polar Expeditions, P.-É. Victor Expeditions.

Contains a brief report on the insects and plants collected at Ege at the base of Atå Sund (69°45' N.) during this expedition's 1949 summer trip, in which author participated as entomologist. The itinerary (voyage on the *Fjellberg*) is given briefly, and notes on the climate of the area, ecology of the local plants, biotopes, local fauna especially insects, and the biogeography of Greenland in general. Bibliography (29 items).

**Copy seen:** CaMAI.

**21398. de LESSE, HUBERT.** Observations sur l'époque d'apparition et le comportement des lépidoptères du Groenland occidental et remarques sur leur homochromie. Expéditions polaires françaises, missions Paul-Émile Victor. (Revue française de lépidopterologie, Nov.-Déc. 1949, t. 12, no. 9-10, p. 163-69, plate) **Title tr.:** Observations on the time of appearance and on the behavior of the Lepidoptera of West Greenland with notes on their homochromy. French Polar Expeditions, Paul-Émile Victor Expeditions.

Contains itinerary of the Victor party Apr.-May 1949, to the point of study, Ege 69°45' N. on the West Greenland coast; summary of the collection of butterflies during June-Aug.; and note on the period of their appearance with the species arranged in chronological order of their collection and the location of the finds. This is followed by a section on homochromy, i. e. the monotony in colors, very strongly developed among the

observed butterflies. Bibliography (20 items).

**Copy seen:** DSI.

**21399. de LESSE, HUBERT, and P. VIETTE.** Zoologie, premier note: Microlepidoptera. Expéditions polaires françaises (Missions Paul-Émile Victor). Campagne 1949 au Groenland. (Société entomologique de France. Annales, 1946, pub. 1949. t. 115, p. 81-92, 14 illus.) **Title tr.:** Zoology, 1st note: Microlepidoptera. French Polar Expeditions (Paul-Émile Victor Expeditions). The campaign of 1949 in Greenland.

Contains an account of the small moths collected and studied at Ege on the western coast of Greenland at latitude 69°45' N. Five species are dealt with in detail, one of them *Agonopterix victori* n. sp., new. Taxonomical data, synonyms, ecology (in brief), related species, metamorphosis, etc. are discussed. Bibliography (6 items). **Copy seen:** DSI-M.

**21400. de LESSE, HUBERT.** Zoologie, 4e. note, Macrolepidoptera. Expéditions Polaires Françaises, Missions Paul-Émile Victor. (Société Entomologique de France. Annales, 1948. t. 118, p. 51-78, illus.) **Title tr.:** Zoology, 4th note, Macrolepidoptera. French Polar Expeditions Paul-Émile Victor Expeditions.

Contains descriptive notes on 19 species of butterflies collected on the West Greenland coast (69°45' N. lat.) during the second (1949) sojourn of the Victor Expedition in the Ekip Sermia region. A new species of geometrid moths, *Operophtera groenlandica*, n. sp. is isolated and described in full. For all the species, data on dates of appearance, area and altitude, vegetation, etc., are included. A summary of previous parties' collecting of Lepidoptera in the region introduces this report. Bibliography (over 40 items). **Copy seen:** CaMAI.

**21419. DENMARK. GREENLAND DEPT.** Report on Greenland 1951. Copenhagen, 1951. 115 leaves, illus., tables, diagrs. Process printed.

**Contains** in this third annual report presented to the United Nations, a comprehensive account of the country and its conditions (mainly as of 1950-51, but some statistical data from 1947) noting particularly progress in implementation of recommendations of the Greenland Commission 1948-50 (chairman H. H. Koch, q. v.) In 4 parts: 1. General information (p. 1-12): population and vital statistics for 1949; government; legal development and human rights. 2. Social conditions (p. 13-37): racial and cultural relations; labor and employment; public health, sanitation, hospitals, etc.; housing; relief and welfare; crime and penal administration. 3. Educational conditions (p. 38-54): school and church activities; training of Greenlanders in Denmark; scientific research; press, radio, libraries, films, clubs, etc. 4. Economic conditions (p. 55-113): agriculture, animal husbandry, hunting, sealing and fishing; industry, including mining, power production, canning, handicrafts, etc.; standard of living; communications and transport; public finances; banking and credit; trade, including exports 1947/48-1949/50, and comment on inauguration of Danish non-governmental trade in Greenland. 37 photographic illus. of Greenlanders and their activities are included. For 1949 report, see *Arctic Bibliography* No. 2367.

**Copy seen:** CaMAI.

**21420. DENMARK. GREENLAND DEPT.** Report on Greenland 1952. Copenhagen, 1952. 113 leaves, 36 tables (process print).

**Contains** the fourth annual report presented to the United Nations on the country and its conditions (mainly in 1950-52, with some data however, going back to 1923). In four parts: 1. General information (p. 1-7): population and vital statistics (1950); government. 2. Economic conditions (p. 8-52): agriculture, forestry, fisheries; mining; power and power production; industry; transport and communications; finances; trade. 3. Social conditions (p. 53-91): race and cultural relations; human rights; status

of women and labor; standard of living; town and rural planning; social security; public health, etc. 4. Educational conditions (p. 92-113): administration and organization; adult education; buildings and equipment; youth and cultural organizations; research; nature protection; press, radio, movies, etc.

"Snow metamorphism is a process during which freshly fallen, flaky snow changes in time to a grainy aggregate. Grain size was found to be one of the most important snow characteristics in addition to density, temperature, and grain binding. The sedimentation method of determining grain size is found to be the most advantageous. An elutriating vessel, 100 cm. long and 225 cm<sup>3</sup> in cross-section, is filled with petroleum. A slide plate separates a cylindrical space 8 cm. in height and is filled 2/3 with petroleum from the main vessel. A stirring mechanism is built into the space and a scale balance, connected to a spring scale, is suspended on steel wire in the vessel. Experiments are performed in a laboratory maintained at -10° C. A 5g. snow sample is inserted in the upper space and stirred. The slide-plate is opened, the grains enter the vessel, and slowly descend onto the scale. The deflection of the scale is measured photographically as a function of time as the particles accumulate. The size of the particles may be determined from deflection data and Stoke's law. Grain size diagrams and a distribution table of size in different heights above ground in a thick layer of snow are obtained for different snow types. Results indicate that the method is readily reproducible for identical samples."—SIPRE.

the U. S. A. Ottawa, Feb. 1950. 70 p. incl. illus., tables, graphs, maps, diagrs. appendices A-C. (National Research Council of Canada. Division of Building Research. Tech. Rept. No. 5)

"Problems of snow, ice, glaciers, snow-drifts, avalanches, atmospheric icing, and permafrost in Canada are reviewed. Economic aspects, such as snow removal on highways, airports, railway tracks and city streets, transportation, and ice pressure on dams and hydraulic structures, are presented, with recommendations for investigations and/or treatment. The institutions for snow and ice research in 11 countries in Europe, Asia and North America are listed with the names of directors, addresses, and brief summaries of the activities. An international snow classification system is recommended. Suggestions are made for a classification scheme of the literature. A description of D. C. Pearce's tour to snow and ice research institutions in Canada and U. S. in 1948-49 is appended."—SIPRE.

**21451. DEUTSCHE MILITÄRARZT.** Beobachtungen über das seelische und körperliche Verhalten einer Truppe im subarktischen Klima Nordnordwegens, nördlich des 70. Breitengrades. (Deutsche Militärarzt, 1941. v. 6, p. 555-56, chart) **Title tr.:** Observations on the psychic and somatic behavior of a troop in the subarctic climate of northern Norway, north of 70° latitude.

Contains report on a battalion which spent 18 months between 70° N. and

Nordkap, by a doctor who had been attached to the unit for two years, and so had comparative data. Information on diet, vitamins, alcohol, housing, way of life, etc., is offered. No "polar tantrums" were observed. Except tiredness at late morning hours and sleeplessness during first half of night, which were common in November and December, no psychic disturbances were observed. An increase in intestinal disorders is noted and is attributed to the poor cooking of the field kitchens. **Copy seen:** DSG.

Hamburg, 1950. p. 1., 24 p. 34 charts on 28 p. folio. (Nr. 2335) **Title tr.:** Ice atlas of the North Atlantic Ocean and summarized ice charts of the North and South Polar regions.

Compiled and written by J. Büdel.

Text contains discussion of formation and distribution of sea ice; occurrence of river, glacial and sea ice in oceans and bordering seas; ice conditions in the Arctic Ocean and seas, North Atlantic and Barents Sea, large inland or peripheral seas (e. g. Hudson Bay, White Sea, Gulf of St. Lawrence, etc.) and the Antarctic Ocean; geographic types of sea ice (polar, polar-oceanic, icebergs, polar shelf and bay ice, and the pure marine to "extreme continental" types of ice in peripheral or inland seas). Bibliography (37 items).

**Charts:** mean monthly limits, and types of ice for North Atlantic (no. 1-13), Arctic Ocean (no. 14-26), and mean limits, 1929-39, for Jan., Feb., Mar., Apr.-June, July-Sept., Oct.-Nov. and Dec.; also types of ice for the Antarctic Ocean, no. 27a-h.

**21453. DEVIK, OLAF MARTIN, 1886-** . Ice formation in lakes and rivers. (Geographical journal, May 1944. v. 103, p. 193-203, incl. diagrs.)

"Considering the heat loss by radiation, convection, and evaporation from a water surface at 0° C with an air temperature at -10° C, the net heat loss when the sky is clear and the sun's altitude is 5° is shown to be 23.1 cal/cm<sup>2</sup>/hr. In 1 hr. this would cause formation of an ice sheet 3.2 mm thick. The 'black body' property of water for infra red radiation was used to determine water temperatures during the freezing process with a Moll thermopile. A sheet of ice was allowed to form and was suddenly covered by a thin layer of water with a temperature slightly above freezing. After 2 min. the surface temperature had decreased to -1.5° C and after 5 min. had increased to 0° C where it remained constant. Supercooling is necessary in the freezing process which is slowed considerably by the release of heat of solidification. In addition to the heat balance and supercooling, turbulence is important for ice formation in running water since it produces thermal gradients and distributes currents of supercooled water throughout the stream or river. These currents assist the formation of frazil and anchor ice. Precautions against damage by such ice formations include measures to reduce turbulence and to encourage formation of an ice covering over the water surface."—SIPRE.

**21454. DEVIK, OLAF MARTIN, 1886-** . Ice formation in lakes and rivers. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. Assemblée générale d'Oslo, 1948. Procès-verbaux des séances. t. 2, Travaux de la Commission de la Neige et des Glaciers, pub. 1950? p. 359-66, diagrs.)

Brief discussion of "loss of heat from a water surface" and "the corresponding growth of ice under some typical meteorological conditions;" including growth of a sheet of ice, ice formations and supercooling of the water surface, ice formation in running water, and some practical applications of this knowledge in dealing with frazil and anchor ice and ice dams in connection with river traffic and water-power installations. **Copy seen:** DGS.

**21455. DEVIK, OLAF MARTIN, 1886-** . Supercooling and ice formation in open waters. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. Assemblée générale d'Oslo, 1948. Procès-verbaux. t. 2,

Travaux de la Commission de la Neige et des Glaciers, pub. 1950? p. 380-89, illus., tables, diagrs.)

Discussion of measurements in 1941-42, of super-cooling in static ice formation (in still water) and dynamic ice formation (in running water), carried out by means of revised apparatus for measurement of surface temperature. "An error concerning the determination of the thermal sensitivity of the receiver (Moll thermopile) was discovered" after the publication of the author's *Thermische und dynamische Bedingungen der Eisbildung in Wasserlaufen*, etc., 1931, making a new investigation desirable. Author includes "chief points concerning the revised apparatus."

**21456. De WINDT, HARRY, 1856-1933.** Russia as I know it. Philadelphia, Lipincott, 1917. viii, 232 p. 12 plates.

Contains a journalist's account of various parts of European and Asiatic Russia as observed on several trips during a 20-25 year period before World War I, partly to observe the Siberian exile system. Includes (chap. 13, p. 135-43) description of his journey from Yakutsk to Verkhoyansk by a deer sledge; notes on shamanism (p. 151-53). Chap. 15 describes "some strange races," among them the Samoyeds (p. 157-58), Ostyaks (p. 158), Yakuts (p. 159-60). The Chukchis (among whom the author lived on two occasions for about three months in all) are described in more detail (p. 161-66, 4 plates).

Contains an account of aerial mapping carried out in connection with investigation of volcanoes, first by Prof. A. N. Zavaritskiĭ in his Kamchatka Expedition of 1946. Methods and equipment are noted, itineraries (and maps) of the flights given and as results of the aerial reconnaissance and mapping, photographs of Klyuchevskaya, Avacha and Krashenninnikova volcanoes (plates 1-3). The results of this experiment were considered excellent and aerial mapping was again carried out in a similar investigation in the Caucasus in 1947.

Miklukho-Maklaia. Trudy, 1951. Novaya seriya, t. 14, p. 95-108) **Title tr.:** Transition from the native tribal bonds to those of a territorial nature in the history of the peoples of the northern Siberia.

Contains an account of the social organization of Chukchis, Koryaks, Eskimos,

Ainu, Tungus, etc., with a tendency to force the ethnological facts into the framework of the Marxist theory on the evolution of social relations.

**Copy seen:** DLC.

**21500. DOLGIKH, B. O.** Proiskhozhdenie nganasanov; nekotorye predvaritel'nye zamechaniya. (Akademiya nauk SSSR. Institut étnografii. Trudy, 1952. Novaya seriya, t. 18, Sibirskii étnograficheskiy sbornik, t. 1, p. 5-87, 2 illus., 3 maps) **Title tr.:** Origin of the Nganasans; some preliminary observations.

Contains an account of these Samoyedic tribes, also called Tawgis-Samoyeds, about 1,665 persons in 1926-27 in number, living on the Taymyr Peninsula: their occupation (hunting wild reindeer and breeding domesticated ones, of which they had in 1926-27 about 60,000 head, hunting birds and fishing), their dwellings, clothing, and food, shamanism, folklore (epic songs and historical legends), language (toponymics and lexica), their social organization and family (exogamy). Traditional sayings and legends about different tribes and families since the 17th century; taxes paid in sable furs; number of people, etc. The author considers the Nganasan tribes as descendants of the western Yukaghirs who were assimilated by Samoyeds. He mentions that he had the opportunity of observing this people from 1926 to 1938.

**Copy seen:** DLC.

**21501. DOLGIKH, B. O.** Rasselenie narodov Sibiri v XVII veke. (Sovetskaya étnografiya, 1952, no. 3, p. 76-84, fold. map) **Title tr.:** Peoples settled in Siberia in the 17th century.

Contains account of the distribution of various peoples indigenous in Siberia before the Russians came there. Their areas of settlement are shown on a map prepared by Institut étnografii akademii nauk SSSR. The Samoyeds are shown as having extended further to the south at this time. A large area (eastward from the lower Lena to Anadyr' Bay) was inhabited by the Yukaghirs. The Chukchis occupied the Chukotsk Peninsula, also a locality west from the mouth of the Kolyma. The Yakuts lived as a compact mass at the junction of the Lena River with the Aldan and Vilyuy. A large area was occupied by Tungus who were not so much intermingled with other peoples as they are now.

Translation of the author's *Bland samojeder i Sibirien, dren 1911-1914*, Helsingfors 1915 (235 p.) copy at MH; 2d ed. Stockholm 1918 (217 p.) copy at NN; 3d ed. 1922. There is also a Finnish edition of this book: *Siperian samojedien keskuudessa vuosina 1911-1913 ja 1914*, 2d ed. Helsingissä 1923 (263 p.)

Narrative of the author's travels in Siberia in 1911-13 and 1914. The main topics treated are: Tomsk, the town of Narym, the village of Tymskoye, the Samoyeds of Narym, trips to the Samoyeds of the Ob', and the Tym, the Samoyeds on Ket River, their religion and folklore, trips along the Yenisey River, the Samoyeds on Taz, back to the Ob'. The last chapter "Among the disappearing tribes" deals with the author's second journey to the Kamass-Samoyeds in 1914. His ethnographic observations throughout the narrative give a comprehensive picture of the material and social culture of the Samoyed groups and some data on clothing, customs, etc., of Tungus and Yeniseians. The book is illustrated with 61 photographs of these peoples and their country, reproduction of some of their drawings and a map showing Donner's travel route.

**21507. DONNER, KAI, 1888-1935.** Ethnological notes about the Yenisey-Ostyak (in the Turukhansk region). Helsinki, 1933. 104 p., 38 illus. (Suomalais-ugrilainen seura. Toimituksia, 66)

In 1928 a Yenisey-Ostyak student at the Institute for Living Eastern Languages (Institut zhivyykh vostochnykh iazykov) in Leningrad was sent to Finland to assist Donner in his linguistic investigations. This paper contains the descriptions of features of Yenisey-Ostyaks' (Yeniseians') life offered by the assistant in amplification or elucidation of the linguistic data (to be published as a

glossary later). These notes deal with the daily life, dwellings, clothing, food, hunting, fishing, means of communication, numerals, games, etc., reindeer-breeding, marriage and child-birth, calendar, shamanism, religious ideas, bear festival, etc. Fundamental words (about 200) are given in the Yeniseian dialect, occasionally also in Ostyak-Samoyed, throughout the text and listed as an index. Included are the assistant's sketches made in illustration of the various matters he described. **Copy seen:** DLC.

**21508. [DONNER, KAI], 1888-1935.** Forschungsreisen. (Finnisch-ugrische Forschungen. Anzeiger, 1913. Bd. 13, no. 1-3, p. 39-44) **Title tr.:** Expeditions.

*Contains* report of Donner's sojourn in 1912-13 among the Ostyak-Samoyeds living on the Rivers Tym, Tas, Ket, and Chaja; whence he brought home scores of linguistic notes from all the dialects, several hundred tales and proverbs, shamanistic songs and a large epos, also several hundred museum objects and photographs. The most difficult part of the trip was crossing of the territory between Yenisey and Ob'. Report on his 1911 trip in the Tym River region was published in this same journal for 1911, Bd. 11, no. 1-3, p. 35. A similar report on his travels and collections among Samoyed groups on the Narym, Tym, and Ket Rivers in 1911-12 appeared in the same journal 1912, Bd. 12, no. 1-3, p. 142-44. **Copy seen:** DLC; InU.

**21509. DONNER, KAI, 1888-1935.** Kamassisches Wörterbuch nebst Sprachproben und Hauptzügen der Grammatik, bearbeitet und herausgegeben von A. J. Joki. Helsinki, 1944. li, 216 p., illus., map. (Suomalais-ugrilainen seura. Lexica Societatis Fenno-Ugricae, 8) **Title tr.:** Kamassic dictionary with texts and main features of the grammar, worked out and edited by A. J. Joki.

*Contains* outline of the life and work of Donner (p. xii-li) particularly his travels in 1911-13 and 1914 among the Samoyeds; dictionary (p. 1-82), texts (p. 83-118), and main features of the grammar, by Joki (p. 119-90), of the Kamassintsy, a Samoyed group in the upper Yenisey region. Appended (p. 191-99) are supplementary data from Donner's first trip and index in German. **Copy seen:** DLC; InU.

**21510. DONNER, KAI, 1888-1935.** M. A. Castrén's memory in Russia.

(Suomalais-ugrilainen seura. Aikakauskirja, 1932. v. 45, no. 1, p.

*Contains* an extensive review of the Russian Academy of Sciences' publication (*Pamiäti M. A. Kastrena k 75-letiiu dnâ smerti*) in 1927, on the 75th anniversary of the death of Castrén, q. v. Includes as well, an account of Castrén's travels in northern Eurasia 1843-48, among the Samoyeds (mostly), the Tungus, Yenisey-Ostyaks (Yeniseians), and Kotts; also additional notes on several problems, especially on the Yeniseians (or Kets); and some corrections by Donner to his own previous articles on the Yeniseians.

**Copy seen:** DLC; InU.

**21511. DONNER, KAI, 1888-1935.** Quelques traîneaux primitifs. (Finnisch-ugrische Forschungen, 1915. Bd. 15, p. 91-104, 7 illus.) **Title tr.:** Some primitive sledges.

*Contains* a description of several types of very primitive sleighs, pulled by a man or animal in winter or in summer. They were found in 1914 among the Kamasses (Samoyeds) living north of the Sayan Mountains (govn. of Yenisey) and are compared with those of the Lapps and of the Forest or Ostyak-Samoyeds living on the Tym River. A type of sleigh ("le fardier scaphoïde") has a very similar form among the Samoyeds and the Lapps, and probably developed from skis. The Tungus of Narym, living close to the Ostyak-Samoyeds, have a different type of sleigh, although very primitive, too. **Copy seen:** DLC; InU.

**21512. DONNER, KAI, 1888-1935.** Samojedische Benennungen der Russen. (Suomalais-ugrilainen seura. Toimituksia, 1928. no. 68, p. 366-70) **Title tr.:** Samoyedic names for Russians.

*Contains* discussion of the Samoyedic word *lôs*, probably loan-word from the Ob'-Ugrian languages, meaning not only a Russian, but also a familiar spirit of a shaman. Similarly among other peoples of northern Asia: e. g. the Anadyr'-Chukchis use *kačak* as the name for a Russian and as the word for a spirit or devil; so do the Yenisey Ostyaks use *kinš*. Author concludes: these Samoyed and Ostyak words indicate that Christianity was introduced among those peoples by the Russians.

**Contains** 17 lists of Samoyedic words originally published incidentally in explorers' narratives (16-20th centuries) now rare or difficult of access. The word-lists are reproduced from the original publications by a photo-offset process.

**Copy seen:** DLC; InU.

**21514. DONNER, KAI, 1888-1935.** A Samoyede epic. (Suomalais-ugrilainen seura. Aikakauskirja, 1913-18. v. 30, no. 30, p. 1-13, plate)

**Contains** account of Donner's folkloristic discoveries during a sojourn on the Tym River and a trip along the Ket in autumn 1912; including an indigenous Samoyede epic heard (for the first time) from the son of a famous shaman at Metashkina, and an even richer discovery heard in Yenisey province among the so-called Natsko-Pumpokol Samoyeds. The latter is a hero-cycle known among the widely scattered tribes of Samoyeds all along the Tym down to the Ob', on the Yenisey and its tributaries, and on the Tas River. A précis of this cycle is given. Similar sagas are known also among the Ostyaks on the Vakh River.

**21517. DONNER, KAI, 1888-1935.** Ueber das Alter der ostjakischen und wogulischen Renntierzucht. (Finnisch-ugrische Forschungen, 1927. Bd. 18, p. 115-44, 2 illus.) **Title tr.:** On the age of reindeer-breeding among the Ostyaks and Voguls.

The great majority of the Ugrians formerly lived in Europe, westward of the Ural Mountains, and were driven into Siberia by the Zyryans and Russians during the 13th and 14th centuries. The Ugrians then came into contact with the Yurak-Samoyeds and from them learned reindeer-breeding, probably in 15th century.

**21519. DONNER, KAI, 1888-1935.** Ueber die Jenissei-Ostjaken und ihre Sprache. (Suomalais-ugrilainen seura. Aikakauskirja, 1930. v. 44, no. 2, p. 1-32) **Title tr.:** The Yenisey-Ostyaks and their language.

**Contains** a description of reindeer husbandry, shamanism and language of the Yeniseians (or Kets) living in the middle Yenisey basin, based on author's investigations made in the village of Dudinka, near the town of Yeniseysk (58°27' N. 92°10' E.) and on information of a native, Dibikov, brought from Turukhansk to Helsinki, for three months in 1928. According to the author, the Yeniseians' language belongs to the Indo-Chinese group. The Ostyak-Samoyeds have had great influence on the Yeniseians; almost all of whom speak Ostyak-

Samoyedians fluently (but not vice versa), and whose techniques of reindeer husbandry, fishing and hunting have been adopted from the Ostyak-Samoyeds. The shamanism of the Yeniseians, however, has a quite different form and shows some affiliations with Tungus.

"The author points out an important shortcoming of mean monthly charts of pressure and temperature, namely they do not allow one to establish the course of the elements from month to month or from year to year for a specific month. He, therefore, offers a method of graphic presentation of meteorological processes where the mean monthly values are expressed not in figures but in gradients, and the plotting on the same chart of values for a given period of time reveals the long range trend of the element. Charts constructed by this method for pressure and temperature in the eastern part of the Kara Sea [on the basis of data from stations at Dikson, Domashnyi Islands and Cape Chelyuskin] for various periods of time—13 years (1930-1943),

4 years (1930-1934, 1934-1938), etc., disclose the trends of variation of these elements and their inter-relation."—*Metereological abstracts and bibliography*, Apr. 1952. v. 3, no. 4, p. 325.

58-64) **Title tr.:** On the formation of frost wedges.

"Wedge-shaped fissures in rock material near the ground surface are the result of pressure forces which originate during the transition of water into ice in a closed system. Investigations of permafrost structure in Alaska show that the vertical ice veins are not originally contraction crevices, but the result of a single steady freezing process directed downward in a frost-susceptible soil. The process leads to a horizontal and vertical separation and concentration of pure ice masses. The steady addition of water from the unfrozen subsoil and the change into ice causes a vertical heaving of the soil which is greatest in the vicinity of the vertical ice veins."—SIPRE.

**21554. DUFFEY, ERIC, and D. E. SERGEANT.** Field notes on the birds of Bear Island. (Ibis, Oct. 1950. v. 92, p. 554-63)

*Contains* introductory remarks on the birds recorded previously; on predation of the arctic fox (the only land mammal which "must live almost solely on birds during the summer"); on climatic fluctuation, which since 1940 has been reversed from the amelioration of 1900-1940, resulting in a decrease of breeding; on southern species noted earlier; and on non-breeding birds; followed by field notes on 28 species observed during July 18-Aug 20, 1948. Bibliography (18 items).

**Copy seen:** DSI-M.

**21555. DUFFEY, ERIC.** Field studies on the fulmar *Fulmarus glacialis*. (Ibis, 1951. v. 93, no. 2, p. 237-51)

*Contains* observations on marked fulmars, made in Ireland and continued on Bjørnøya in July-Aug. 1948, and on Fair Island in 1949, with records (table 1) and notes on relationship between chick and parent birds, food and feeding habits. For additional information on the behavior of the chicks, see E. Armstrong *Discharge of oily fluid by young fulmars*, 1951.

**Copy seen:** MH-Z.

**21556. DUFFEY, ERIC, and others.** The "rodent run" distraction-behavior of certain waders. (Ibis, Jan. 1950. v. 92, p. 27-33)

Pt. 1, "Field observations on the purple sandpiper," by E. Duffey and N. Creasey, describes in clear detail the behavior of several sandpipers observed on Bear Island in 1948.

Pt. 2, "Interpretation of 'rodent-run' display," by K. Williamson, analyzes the nature and origin of distraction displays, and notes the misleading of arctic foxes and man. Appendix notes eight other species in which the "rodent-run" occurs. Bibliography (23 items).

**Copy seen:** DSI-M.

**21558. DUGAL, LOUIS-PAUL, 1911- . and M. THÉRIEN.** Ascorbic acid and acclimatization to cold environment. (Canadian journal of research. June 1947. v. 25, sec. E, p. 111-36, diagrs.)

Experiments on rats showed large increase in ascorbic acid content of tissues after prolonged exposure and adaptation to cold; a decrease however in rats unable to adapt to cold; and a direct relation between adaptability and the content of ascorbic acid in the adrenals. Bibliography (16 items).

Abstracted in Federation proceedings, 1949, v. 8, p. 156. **Copy seen:** DLC.

**21559. DUGAL, LOUIS-PAUL, 1911- . and G. FORTIER.** Ascorbic acid and acclimatization to cold in monkeys. (Journal of applied physiology, 1952. v. 5, no. 3, p. 143-46, 2 tables)

*Contains* a report on experiments with rhesus monkeys, showing that animals pre-exposed to 10° C. for six months and receiving daily 25 mg. vitamin C, did not resist better to intense cold, than controls kept at room temperature and taking the same amount of vitamin; but monkeys pre-exposed to 10° C. and given 325 mg. of vitamin C daily, resisted better to extreme cold than controls kept at room temperature prior to exposure, and better than the group which received only 25 mg. of ascorbic acid daily. Bibliography (9 items).

**Copy seen:** DLC.

**21560. DUGAL, LOUIS-PAUL, 1911-** , and **G. FORTIER.** Ascorbic acid and acclimatization to cold in monkeys. (*Revue canadienne de biologie*, Mars 1952. v. 11, no. 1, p. 59-60)

*Contains an abstract on experiments with monkeys, showing that animals pre-exposed to mild cold and receiving 25 mgs/day of vitamin C did not resist intense cold better than controls pre-exposed to room temperature; animals similarly treated but given 325 mgs of vitamin daily, withstood severe cold better than their controls kept first at room temperature, and better than the animals pre-exposed to cold and receiving only 25 mgs. daily.*

**21561. DUGAL, LOUIS-PAUL, 1911-** , and **M. THÉRIEN.** Effets de l'acide glutamique et d'extraits de foie sur la résistance du rat blanc à un froid intense. (*Revue canadienne de biologie*, July 1952. v. 11, no. 2, p. 180-84, 2 tables) *Title tr.:* The effects of glutamic acid and liver extract on the resistance of the white rat to intense cold.

*Contains a report on experiments showing that addition of 1 per cent glutamic acid to a normal diet did not increase significantly the resistance of rats to low temperature; commercial liver extract added to a similar diet seemed to diminish their resistance to cold. Bibliography (9 items). Summary in English.*

*Copy seen:* DLC.

**21562. DUGAL, LOUIS-PAUL, 1911-** , and **M. THÉRIEN.** The influence of ascorbic acid on the adrenal weight during exposure to cold. (*Endocrinology*, May 1949. v. 44, p. 420-26)

*Contains a report on experiments with guinea pigs and rats exposed to low temperatures and injected with large doses of ascorbic acid (vitamin C). The typical enlargement of the adrenal, repeatedly observed in cold injuries was "completely prevented" and the resistance to cold increased. Ascorbic acid thus seems to play a compensatory role similar to that of adrenal cortical hormones. These experiments were made at the Research Dept. on Acclimatization, Institute of Human Biology, Medical School, Laval University. Bibliography (22 items).*

*Copy seen:* DLC.

**21563. DUGAL, LOUIS-PAUL, 1911-** , and **M. THÉRIEN.** Relation entre la teneur en acide ascorbique des organes

et l'acclimatation au froid chez le cobaye. (*Revue canadienne de biologie*, 1947. v. 6, p. 552-53) *Title tr.:* Relation between ascorbic acid content of the organs and acclimatization of the guinea pig to cold.

*Contains a report on experiments which demonstrated that groups or individuals which contained more ascorbic acid in their organs, especially in the adrenal, acclimatized much better to cold. Animals exposed to cold also withdrew more ascorbic acid from their organs especially from the adrenal, than those kept at normal temperature; individuals which did not acclimatize well contained little ascorbic acid in the adrenal glands.*

*Copy seen:* DLC.

**21564. DUGAL, LOUIS-PAUL, 1911-** , and *others.* Resistance to extreme temperatures in connection with different diets. (*Canadian journal of research*, Dec. 1945. v. 23, sect. E, p. 244-58) *Other authors:* C. P. Leblond, and M. Thérien.

*Contains a study on the value of different diets for conferring on animals resistance to extreme temperatures. The diets were equi-caloric and equi-vitaminic, and differed only in the proportions of fats, proteins and carbohydrates. The self-selective method of feeding was applied. A diet rich in fat was found to be "decidedly superior" to one rich in carbohydrates, for resistance and adaptation to cold. Bibliography (11 items).*

**21570. DUNBAR, MAXWELL JOHN, 1914-** . Feed-back systems and oceanography. (American scientist, Oct. 1950. v. 38, p. 599-603, sketch map)

Discussion of possible cyclical effects of feedback systems in oceanic circulation, using the Atlantic drift, polar basin, and eastern Canadian Arctic current systems as examples and suggesting effects relating to climate and sea level. Bibliography (10 items). *Copy seen:* DGS.

**21571. DUNBAR, MAXWELL JOHN, 1914-** . On *Themisto libellula* in Baffin Island coastal waters. (Canada. Fisheries Research Board. Journal, Mar. 1946. v. 6, p. 419-34, illus., sketch map, diags.)

Study of the "gross internal anatomy, food habits, local summer ecology and breeding cycle" of a schizopod crustacean collected largely in Lake Harbour, southern coast of Baffin Island, 1939-40, and

from Frobisher Bay, 1940; a planktonic organism serving as the most common food of the ringed seal. Bibliography (14 items) **Copy seen:** DLC; DSI-M

**21572. DUNBAR, MAXWELL JOHN, 1914-** . Our ignorance of the eastern Arctic. (Public affairs, Dec. 1946. v. 10, p. 25-29)

Plea for research into marine and aviation problems; for study and conservation of walrus and seal; and for investigation of effects of amelioration of climate on eastern Canadian arctic waters and their populations.

**Copy seen:** DLC.

**21573. DUNBAR, MAXWELL JOHN, 1914-** . Resources of arctic and subarctic seas. (Royal Society of Canada. Transactions, June 1951. Ser. 3, v. 45, sect. 5, p. 61-67)

Contains discussion of the fundamental importance of the sea for an arctic economy; the physical and chemical properties of arctic, subarctic and boreal seawater; arctic waters as habitat of sea mammals, subarctic as that of fish, and apparent reasons for this difference; differences in productivity between arctic and subarctic seas; differences in water polymer content between the two areas as possible causative factor in productivity. Bibliography (7 items).

**Copy seen:** DLC.

**21574. DUNBAR, MAXWELL JOHN, 1914-** . The Ungava Bay problem. (Arctic, Mar. 1952. v. 5, no. 1, p. 4-16, illus., map)

Contains a presentation of the problem of a disrupted native economy, to be solved by immediate assimilation, or alternately by putting Eskimo life as closely as possible on its original basis. Stressing the advantages of the latter, the author analyzes in detail the poor condition of marine mammal life and hunting; also, similarly, the inadequacy of fresh-water fishes and fisheries to serve as economic basis for Eskimos of Ungava region. He suggests that developing marine fisheries in the Port Burwell area could solve the problem and recommends several measures, including educational, to place the Eskimo economy on a healthy footing.

**21576. DUNCAN, A. C.** Diet and disease in the subarctic. (Lancet, Dec. 20, 1947, v. 253, p. 919-21)

Contains account by physician at St. Mary's Hospital at Dawson (pop. 1,500-2,000) in Yukon Territory, of seeming immunity of people in this area to a number of apparently unrelated diseases. In his 14 years' experience there, no local case of rheumatic fever was observed and one imported case improved remarkably with no acute remissions; tonsillitis, septic throats and upper respiratory infections show the usual or somewhat higher incidence. Only one case of toxemia of pregnancy was recorded during the whole period and premature births are very rare; despite a high alcohol consumption, liver cirrhosis is rare; nephritis and related diseases are unknown; only two cases of cancer were observed. The author attributes the rarity of these diseases to the high protein diet of the populace.

**21577. DUNGAL, NIELS.** Occurrence and manifestations of tuberculosis in

Iceland. (*Acta tuberculosea scandinavica*, 1945. v. 19, p. 275-308, tables)

*Contents:* material; method of work; initial lesions; active tuberculosis; portals of entry; comparison with child tuberculosis in other countries; from conclusions: tuberculosis in Iceland is contracted at any age, the greatest number of infections taking place in the third decade; about 50 percent of the population show no signs of having ever been affected by TB. Resistance is very slight in the young age-groups; re-infections are rare; acute forms of TB are prevalent during the first five decades, especially in the first two; it is relatively common in old people often without conspicuous clinical symptoms; all TB in Iceland is of human origin; respiratory tract is main portal of entry. Bibliography (13 items). *Copy seen:* DSG.

**21578. DUNGAL, NIELS.** Rickets in Iceland. (*American journal of the medical sciences*, 1945. v. 210, p. 70-76, illus., tables)

Report on survey on 253 children (3-24 months old) in Iceland. Each child was examined clinically and with x-rays of wrist and knee, usually also of crus and ankle. "The clinical examination showed definite signs of rickets in 66 percent. Of these, 35 percent had a visible Harrison's groove, 44 percent a rachitic rosary, and definite signs of cranial rickets were found in at least 54 percent. Roentgen-ray photographs showed signs of rickets in 75 percent of the children." Results of clinical and x-ray examinations showed an incidence of 77 percent with rickets. (—From summary). Bibliography (5 items).

Contains a systematic list of 32 species of fresh-water ostracods (four forms described as new) of Sweden, with synonyms, descriptive notes, dimensions and data on distribution. Includes at least seven species occurring in Swedish Lapland.

**Copy seen:** MH-Z.

**21628. ELBO, J. G.** Lapp reindeer movements across the frontiers of northern Scandinavia. (Polar record, Jan. 1952. v. 6, no. 43, p. 348-58, plate, map)

Contains an historical review and analysis (particularly in relation to the reindeer economy) of the treaties between Sweden, Norway, Finland and Russia since the 18th century in regulation of the trans-frontier movement of reindeer-herding Lapps. A treaty of 1751 fixing the boundary between the United Kingdom of Denmark-Norway and the Kingdom of Sweden (then including Finland) contained a codicil confirming established custom in the Lapps' migrations. International changes, population shifts, etc., entailed successive discussions and growing friction. A new agreement was made in 1883 (mainly fixing the months when

Lapps could cross the frontier), and modified in 1905, 1909. On the basis of biological and other data gathered by two Reindeer Pasture Commissions (1909, 1913, Väinö Tanner, chairman) a new treaty was drawn and signed in 1919. This and its 1949 adjustment are discussed. Tribute is paid to the work of the Commissions whose reports (*Renbetes kommissionens af år 1909 handlingar*, and . . . 1913 . . . , in 27 vols.) are basic works on reindeer ecology and economy. Bibliography (36 items).

**Copy seen:** DLC.

**21629. ELBO, J. G.** The war in Svalbard, 1939-45. (Polar record, July 1952. v. 6, no. 44, p. 484-95)

Contains detailed account of Allied activities in this area year by year in the period 1939-45; German operations are dealt in detail only when they directly affect the narrative. The continued operation of the coal mines, then destruction of installations on Bear Island in Aug. 1941, evacuation of the Norwegian population thence and from West Spitsbergen; "Operation Frithamn" and subsequent efforts to forestall and fight off German attempts to use Spitsbergen; the activities of the Norwegian garrison in defense of the island, 1942-45; the fate of the coal mines, their reconstruction, etc. are set forth. *Appendix* notes briefly the seven German meteorological operations in Svalbard during 1941-45. Bibliography (19 items).

**21634. ELENKIN, ALEKSANDR ALEKSANDROVICH, 1873-1942, and others.** Sinezelenye vodorosli SSSR. Monografiia presnovodnykh i nazemnykh Cyanophyceae, obnaruzhennykh v predelakh SSSR. Spetsial'nai (sistematicheskai) chast'. Vyp. I: 1. Chroococaceae Geitl.; 2. Chamaesiphonaceae Geitl.; 3. Hormogoneae (Geitl.) Elenk.; Vyp. II: 3. Hormogoneae (Geitl.) Elenk. (okonechanie). Moskva-Leningrad, Izd-vo Akademii nauk SSSR, 1938-1949. pt. 2, fasc. I-II: I (1938): 1-984 p., illus. (290 figs.); II (1949): 986-1908. front. (port.), illus., (fig. 291-566). (Akademii nauk SSSR. Botanicheskii institut) **Title tr.:** Blue-green algae of the U.S.S.R. A

monograph of fresh-water and terrestrial Cyanophyceae, found in U.S.S.R. Special (systematic) part.

This is the second (taxonomic) part of a work, a copy of whose first (general) part published in 1936 (679 p.) has not been located for this Bibliography. This systematic part contains in fasc. I (1938): a general sketch of Cyanophyceae, tables for the determination of orders, groups, families and species (ord. Chroococaceae, Chamaesiphonaceae and Hormogoneae (in part) and descriptions of all Russian species with the following data: name, synonymy, Russian diagnosis, critical comments, table for the determination of forms (if more than 2 or 3), habitat, detailed distribution in the U.S.S.R., bibliographical data and distribution outside of the U.S.S.R. Fasc. II (1949) containing a continuation of the treatment of Hormogoneae, was prepared in 1939 but because of war published ten years later in 1949, after the death of the senior author (in 1942). It includes also a supplementary bibliography for the years 1931-35 (122 items) p. 1853-59; alphabetic index of Latin names for both fascicles, p. 1860-96. This work includes many species, native to northern regions of the U.S.S.R. The following families were prepared by junior authors: Gloeocarpaceae (p. 165-26) by M. M. Gollerbach; Scytonemataceae (p. 887-974) by E. K. Kosinskai; and Rivulariaceae (p. 997-1184) by V. I. Polianskii. Data on marine Cyanophyceae was published in E. K. Kosinskai *Opredelitel' morskikh sinezelenykh vodoroslei*, 1948, q. v., as a supplement to this work.

**21637. ELIADE, MIRCEA, 1907-**. Einführende Betrachtungen über den Schamanismus. (Paideuma; Mitteilungen zur Kulturkunde, Juli 1951. Bd. 5, p. 87-97) Translation from French. **Title tr.:** Introductory observations on shamanism.

Bearing mostly on shamanism in arctic, Siberian and Central Asiatic regions, this paper coordinates data on many cultures to define the term as a complex of ecstatic practices based in ancient religious concepts and distinguished from such concepts only in degree or intensity. The shaman seeks to give concrete form to the cosmic-theologic scheme which remains symbolic for the whole community. Shamanism represents the most plausible mystic expression of the primitive religious world. Bibliography (20 items).

**21638. ELIADE, MIRCEA, 1907-**. Shamanism. (In: Fernald, V. T. A., Forgotten religions. New York, Philosophical Library, 1950. p. 299-308)

Author characterizes shamanism by its "magico-religious technique... the ecstatic trip to Heaven, to the Lower World, or to the depths of the ocean," quoting descriptions of the shamanistic perform-

ance among several northern peoples of Eurasia and America; and comments on the symbolism common to northern and Indonesian shamanism. Noting briefly its psychopathological origin, author emphasizes that it is the "images and symbols which express and give signification" to the shamanistic trance. Bibliography (14 items).

Abstract of paper presented to the American Physiological Society, first fall meeting Sept. 1948: Findings from laboratory experiments on three healthy men, included more rapid and effective vasoconstriction with successive cold exposures, continuous diuresis and increased chloride loss during period of cold exposure, no significant difference in basal metabolic rate between hot and cold periods, no consistent changes revealed in blood, plasma and "available fluid" volume during hot or cold periods.

**21655. ELLSON, JOSEPH GILES, 1911-**, and others. Exploratory fishing expedition to the northern Bering Sea in June and July, 1949. Washington, 1950. 56 p. incl. 13 maps., illus., diagrs. (U. S. Fish and Wildlife Service. Fishery leaflet 369) *Other authors:* D. E. Powell and H. A. Hildebrand.

*Contains* (in pt. 1) description of the oceanographic and fishery research already done in Bering Sea, especially on water temperatures and currents. Pt. 2 gives results with discussion, of a general sampling by 51 otter trawl drags, of the bottom fish life between St. Matthew and St. Lawrence Islands, Nome - Norton Sound to Nunivak Island and southward to the Alaska Peninsula region. Water temperatures were taken with each fishing trial. Fish and king-crab were most abundant in warmer waters of 2°-4° C., while shrimp were found mostly in water of 0°-2° C. Several areas yielded heavy catches suggesting possibilities for commercial exploitation. Hydrographic and ecological factors, bottom configuration, etc., as well as weather conditions are also reported. Tabular abstract of data for each station is appended. Bibliography (12 items). This paper is summarized in *Polar record*, Jan. 1952, v. 6, no. 43, p. 370-71.

**21670. ENGINEERING NEWS-RECORD.** Earth-fill dam built on frozen ground. (Engineering news-record, Feb. 5, 1948. v. 140, p. 182-84, illus.)

*Description* of problems and operations at the Hess Creek dam 90 miles from Fairbanks, where sprinklers replaced jet sluicing for removal of overburden, and a refrigeration system was installed to speed refreezing of foundations. "... the frozen overburden was removed an average depth of 20 ft. by sprinkling with water at 52° F. The water of the muck-laden runoff was recovered by pumping it upstream and discharging it into tundra beds. The filtered water flowed back into the reservoir. Radiators containing a refrigerant were set up to quickly refreeze the exposed foundation in the summer."—SIPRE. **Copy seen:** DLC.

**21671. ENGINEERING NEWS-RECORD.** Large-scale DDT spraying reduces mosquito nuisance. (Engineering news-record, Nov. 30, 1950. v. 145, no. 22, p. 30-32, illus., map)

*Contains* note of aircraft used for spraying DDT and their special equipment; the composition of the DDT solution; the way of spraying and its effectiveness; dosage, etc. Also an account of large-scale spraying operations at Goose Bay in Labrador, Watson Lake in Yukon Territories and other localities in northern Canada. **Copy seen:** DLC.

**21672. ENGINEERING NEWS-RECORD.** Letter from Alaska. (En-

gineering news-record, Dec. 14, 1950. v. 145, no. 24, p. 112, incl. map)

"Approximately \$400 million was allocated for construction work in Alaska for the 1950-51 fiscal year. Plans call for the following division of expenditures: \$141 million for military agencies; \$80 million for other federal agencies including \$27 million for roads; \$22 million for the Alaska Railway; \$11 million for civilian airport construction; and \$41 million for housing."—SIPRE.

reduced temperatures in injury and repair in man, 2; effect of moderate cold and refrigeration on wound healing and regeneration of human skin. (Plastic & reconstructive surgery, Jan. 1948. v. 3, p. 11-33, 24 fig.) *Other authors:* H. Baxter and R. H. More.

*Contains* a report on experiments on the effect of cold and refrigeration on healing of wounds caused by removal of skin with a dermatome. Moderate cooling immediately after skin removal delayed the rate of epithelization, this delay being directly proportional to the degree of cold and the duration of exposure; the fibrous tissue formation was not similarly affected and appeared to be increased for a few weeks after cooling. Optimal environmental temperatures for healing and the significance of the experiments are discussed. Bibliography (22 items).

*Copy seen:* DLC.

21677. ENTIN, MARTIN A., and H. BAXTER. Influence of rapid warming on frostbite in experimental animals. (Plastic & reconstructive surgery, June 1952. v. 9, p. 511-24, 7 fig., 5 tables)

*Contains* an extensive study with large numbers of rats and some dogs submitted to a standard reproducible, cold injury. Temperature and duration of exposure were correlated with the temperature in deep tissue and ultimate injury. Rapid thawing in bath of 35°-45° C. was most effective in reducing loss of limb; treatment with temperatures higher than 50° C. is detrimental; general hypothermia preceding acute freezing, results in greater loss of tissue. The mode of action of rapid thawing is discussed. Bibliography (25 items).

"Winter roads are built in logging regions by allowing water to freeze in a single deep rut centered in the roadway. Special sleds are equipped with a single main runner for supporting the load and an accessory runner on each side for maintaining balance. The normal width between the lateral runners is 3.4 m. Several such sleds forming a train may be pulled by truck, tractor, or by horses. The coefficient of resistance to motion for single-track ice-roads is 13-17 kg/ton compared with 18-22 kg/ton on 2-track ice-roads, and 35-50 kg/ton on snow-roads. Two single-track roads may be constructed with a minimum distance of 6 m. between the tracks made by the main runner. Single-track ice-roads require a winter of at least 60 days, little variation in topography, and an abundant supply of water. The construction of such roads is economical and a minimum of 25,000 cu. m. of timber should be made available for a 5-yr. period."—SIPRE. Scaled drawings for sledges and bibliography (48 items) are included. Previous edition was published as *Odnokoleinye traktorno-led'nyye dorogi* (Single track ice roads for tractors) 1942 (138 p.). **Copy seen:** DLC (both editions).

"An electric power station consisting of two boilers, each having a heating surface of 300 m<sup>2</sup> and two turbines with a total capacity of 3600 kw., was constructed on permafrost between 1928 and 1930. The building foundation of stand-

ard construction was sunk 8.3 m. below the surface, well into the permafrost layer. The foundations under the boilers and turbines rested on wooden piles, 25 cm. in diameter, and 7.50 m. long. The 1931-1935 survey indicated that the foundations generally settled uniformly up to the summer of 1934, and that settling became accelerated in the fall of 1934. The boiler foundations sank to 32.9 cm. and the turbine foundations to 19.9 cm. A considerable lag in settling was noted for the building foundations. It was determined that the settling was due to excessive thawing of the permafrost by the heat generated in the plant, to the thermal effects of the water supply system, and to the raised level of the nearby lake which was the water source. Fortification of the foundations with cement blocks and the addition of 12 to 18 piles under the turbines and boilers failed to arrest the deformation process."—SIPRE. **Copy seen:** DLC.

**21683. ERICHSEN, EIVIND.** Norway in a nutshell. Illustrated survey with maps and useful hints for visitors. [Bergen] J. Grieg [1951]. 52 p. illus.

Contains comprehensive but concise information for tourists about the country, the people and their social condition. Included are the northern areas of Norway and the dependencies: Svalbard, Jan Mayen also Norwegian Antarctic areas. **Copy seen:** DLC.

**21710. ESKOLA, PENTTI, 1883-** . Malminetsinnästä ja malmityypeistä. (Terra, 1935. 47:2-3, p. 129-46) **Title tr.:** On ore prospecting and ore types.

"A short history of the prospecting for ores in the Pre-Cambrian rock crust of Finland during later years, and a synopsis of the ore types so far known in Finland with a special regard to their bearing in future prospecting work."—English summary, p. 146. Includes data on some ore deposits in northern Finland.

**Copy seen:** DLC.

**21711. ESKOLA, PENTTI, 1883-** . Selostus Ivalojoen alueella 1924-25 tehtyjen kultatutkimusten tuloksista. (Teknillinen aikakauslehti, 1925. v. 15, p. 263-72, tables, map) **Title tr.:** Observations on the results of the 1924-25 Ivalo River area gold studies.

**Contains** an account of placer mining in the Ivalo River area since 1870. On the basis of 100 tests at various localities, the author, a geologist, estimates that 1,000 kilos of gold is available in river bottoms which contain over two grams of gold to the cubic meter of soil. Individual gold-washing (by pan and small sluice box) would not be practical, but use of machinery should be profitable since it can operate on 0.25 g./m<sup>3</sup> soil areas. The amount of gold in the entire area, on the basis of this preliminary survey, is greater than formerly considered, for other rivers than Ivalo contain gold in quantities over this minimum workable amount. **Copy seen:** DLC.

**21712. ESKOLA, PENTTI, 1883-** . Tietoja Pöyrisjoesta ja sen väylänmuutoksesta Vuontisjärven alapuolella. (Terra, 1908. 20, p. 191-200, illus., map) **Title tr.:** Observations on the Pöyris River and its change of channel below Lake Vuontis.

**Contains** geologic sketch of the locality (about 68°30' N. 24° E.) and the story of how this new channel was caused by a farmer digging small irrigation ditch from the top of the esker (holding the lake side at that point) to his lower fields,

just prior to ice-melting time in 1861 when the lake was high with water and ice. As the digging penetrated the frozen moraine to thaw soil near the lake, water appeared in the soil, shortly thereafter, the side of the lake gave way and the entire area was flooded. The lake level was lowered 7 meters, the previous river-bed dried up, and the new channel crossed to a smaller river. The latter has low banks and is subject to floods, which have deposited soil, making the locality (47 years later) the richest farm land in Enontekiö region in Lapland.

**21716. ESTREICHER, ZYGMUNT.** Die Musik der Eskimos; eine vergleichende Studie. (Anthropos, Ephemeris, 1950. Bd. 45, p. 659-720, 2 maps, musical notes) **Title tr.:** The music of the Eskimos; comparative study.

Contains an investigation of the traditional Eskimo music and its different styles among the Caribou, Alaska and Mackenzie delta, Greenland, Copper, Central and Smith Sound region (i. e. Polar) Eskimos. The study deals with melodic, tonal structure, rhythm, tectonic and other musical aspects. The purest Eskimo style is represented in the songs of Padlermiut, a Caribou Eskimo tribe living to the west of Hudson Bay. The oldest dance songs had stanzas, each stanza consisting of a verse and a refrain which had different tunes. The author used material from others' (not his own) field work.

**21724. EL'PIN, A. G.** Ostfâki na Konde. (Talga i tundra, 1928. no. 1, p. 6-9) **Title tr.:** Ostyaks on the Konda River.

Contains a popular sketch by a native Ostyak of present-day (1928) life of Ostyaks on the Konda River, 59°-60° N. lat., their dwellings, occupation (hunting, fishing and animal husbandry), the economic and cultural situation, etc.

**Copy seen:** DSI-E.

**21725. EXPLORERS JOURNAL.** Scientists bring proof 1,325 feet deep Chubb Crater gouged by meteorite. (Explorers journal, Winter-Spring 1952. v. 30, no. 1-2, p. 24-29, illus. sketch map)

Account of the crater in northern Ungava Peninsula discovered by V. B. Meen in 1950 and investigated by the National Geographic Society—Royal Ontario Museum Expedition in summer 1951. Description and dimensions are given; the crater's origin was established by magnetometer survey and the opinion is given that it was formed by a meteorite exploding as it struck earth 3000-15,000 years ago. Remarks on other notable meteorites are added.

**Copy seen:** CaMAI.

**21726. EYERDAM, WALTER J.** Alaskan and Aleutian Island hepatics. (Bryologist, Mar. 1952. v. 55, no. 1, p. 26-35)

Contains a catalog comprising 17 genera and some 85 species (seven of the latter new to the area) of liverworts. The account is preceded by a list of localities searched; general notes on distribution, etc. The catalog is based on many seasons of collecting. **Copy seen:** DLC.

**21727. EYERDAM, WALTER J.** Extended ranges of four Alaskan marine shells. (Nautilus, Apr. 1944. v. 57, p. 142)

Note on three species taken westward of former known ranges on Aleutian Islands and southern Alaska, also one species (formerly known only as far west as western Bering Sea) taken from the mouth of the Yenisey River.

**Copy seen:** DSI-M.

**21728. EYERDAM, WALTER J.** A giant bracket fungus found in southeastern Alaska. (Svensk botanisk tidskrift, 1952. bd. 46, häft. I, p. 131-32, illus.)

Contains a description of the fungus *Fomes applanatus*, found living on a Sitka spruce on Kuui Island, Washington Bay, Southeast Alaska, with notes on habitat and dimensions.

**Copy seen:** MH-A.

**21729. EYERDAM, WALTER J.** *Uloa drummondii* in North America. (Bryologist, 1951. v. 54, no. 1, p. 57-58)

This rare moss, until recently thought not to be found in America, is reported by the author from several localities in Alaska and the Aleutians. A few collections of this moss have also been made on the east and west coast of North America.

**21730. FAAS, VLADIMIR VIL'GEL'-MOVICH.** Lesnaja promyshlennost'. Moskva, Gos. izd-vo, 1925. 90 p., maps, diagrs. (Bogatstva S.S.S.R., vyp. 6) **Title tr.:** Forest industry. (Natural resources U.S.S.R. no. 6)

This work covers (among others) extensive arctic regions, and offers data on the area of forests in each district; the general character and composition of the forests; ownership; timber industries and number of workmen employed; capital; exports. Chapters on: (1) history of the development of forests in

the U.S.S.R.; (2) forest resources of prewar Russia and the U.S.S.R. and their distribution; the forests of (3) the European part, (4) the Asiatic part of the U.S.S.R., and (5) the Caucasus; (6) forest industry and trade of the U.S.S.R. as connected with timber export. Bibliography (55 items). **Copy seen:** DLC.

**21731. FABER, KURT, 1883-1929.** Unter Eskimos und Walfischfängern; Eismeerfahrten eines jungen Deutschen. Stuttgart, Robert Lutz [1916]. xxv, 369 p. front., plates, map. **Title tr.:** Among the Eskimos and whale hunters; arctic voyage of a young German.

Popular edition considerably abridged by the author's brother, was published in 1942 (272 p. col. front. 3 col. plates, fold. map)

Describes the experiences of the author when (a twenty-year-old on his way round the world) he shipped aboard the whaler *Bowhead*; his trip from San Francisco by Bering Strait to Beaufort Sea, Coronation Gulf and Mackenzie River, where he deserted ship and returned by the Mackenzie, Edmonton and Vancouver to San Francisco. Remarks (derogatory) on life aboard the *Bowhead*, whaling in Bering and Beaufort Seas, calls at Nome, Barrow, the winterings at Herschel Island (1903-04), Banks Island (1904-05), visit to winter-quarters of the *Gjoa* expedition at King Point, etc.

The captain of the *Bowhead*, John A. Cook, published his memoirs as *Pursuing the whale*, 1926 (Arctic Bibliography no. 3391)

**Copy seen:** DLC (1916, 1942).

**21732. FABRICIUS-HANSEN, VIBEKE.** Blood groups and MN-types of Eskimos in East Greenland. (Journal of immunology, June 1939. v. 36, p. 523-30)

Contains a report on the first blood-grouping and M-N tests made on 569 pure Eskimos in the Angmagssalik District of East Greenland. The tests were carried out by the author in 1938 as medical inspector for the Greenland Government Office. A sketch is given of the history and present-day life of the Angmagssalik Eskimos distributed over a coastal tract of about 400 km. in length, 67°-64° N. lat., and numbering 708 in 1938. Results of the tests are presented and discussed in relation to studies on races possibly related to Eskimos. Theories on the origin of the Eskimos in East Greenland are also reviewed. Bibliography (21 items). **Copy seen:** DLC.

**21733. FABRICIUS-HANSEN, VIBEKE.** Blood groups and MN-types of Eskimos, 2 (district of Julianehaab, West Greenland). (Journal of immunology, May 1940. v. 38, p. 405-511)

Contains a report on blood grouping of 1063 persons (both pure Eskimos and mixed Greenlanders) in southern Julianehaab District, West Greenland, carried out in summer 1939. An historical sketch is given of the native population of this area in respect to its intermingling with Europeans. The results of the tests are presented, and attention drawn to difference in blood-type distribution of the pure Eskimos and the more mixed Greenlanders. The author's previous observation that a low N-value is a characteristic feature of the Greenland Eskimos is confirmed by the present study. Bibliography (9 items).

**21747. FAUVEL, PIERRE LOUIS ANDRÉ, 1866-** . Campagne du *Pourquoi-pas?* (Islande et Jan Mayen, 1912). Annélides polychètes. (Paris. Muséum national d'histoire naturelle. Bulletin, 1913. t. 19, p. 80-93, illus.) **Title tr.:** Cruise of the *Pourquoi-Pas?* (Iceland and Jan Mayen, 1912). Polychaetous annelids.

*Contains* annotated list of 30 species of polychaete worms, all but one of which were collected in Greenland Sea or Denmark Strait; with station list showing position, depth, type of bottom and species collected. **Copy seen:** DSI-M.

**21748. FEDCHENKO, OL'GA ALEKSANDROVNA, 1845-1920.** Material k florii Arkhangel'skoï gubernii. (Moskovskoe obshchestvo ispytatelei prirody. Bülleten', 1897, pub. 1898. Novaiâ seriia, t. 11, p. 469-83) **Title tr.:** Materials for the flora of Arkhangel'sk government.

*Contains* a systematic list of 171 species of phanerogams and cryptogams collected in 1896 by A. P. Ivanov in the Pechora River region, and by V. F. Kapel'kin on Kheynya-Sari (Aynov) Island (69°50'N. 31°34'E.) and in the Pechenga Bay region (69°40'N. 31°E.), Murman coast, Kola Peninsula.

**Copy seen:** DLC; MH-A.

**21749. FEDÛSHIN, ANATOLIÛ VLADIMIROVICH.** Vostochno-palearkticheskie formy chernogolovoi gaichki (*Parus atricapillus* L.) s tochki zreniia klimaticheskogo ortogeneza. (Akademiia nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1930. t. 31. vyp. 3-4, p. 529-52, illus., text map) **Title tr.:** Eastern palaearctic forms of the blackcapped titmouse (*Parus atricapillus* L.) from the viewpoint of orthogenesis due to climate.

*Contains* a critical study of eight palaearctic forms of *Parus atricapillus*, including *P. a. lönnbergi*, a bird native to the Kola Peninsula and the Arkhangel'sk region, and *P. a. kamschatkensis* from Kamchatka. Biological variations resulting of climatic variations and influencing the coloring of the birds' feathers, are presented. Bibliography (31 items). **Copy seen:** DLC; MH-Z.

**21750. FEDOROV, EVGENIÛ KONSTANTINOVICH, 1910-** . Geophysical and astronomical observations. (Aka-

demiia nauk SSSR. Comptes rendus (Doklady), 1938. nouv. ser., v. 19, no. 8, p. 581-87, tables)

*Preliminary report of the Soviet North Pole Ice-floe Drifting Expedition May 1937-Feb. 1938, covering observations on air temperature, terrestrial magnetism, aurora borealis, atmospheric electricity, gravity and astronomical determinations.*

**Copy seen:** DLC.

**21751. FEDOROV, EVGRAF STEPANOVICH, 1853-1929.** Kratkoe soobshchenie o rezul'tatakh mineralogicheskogo i petrograficheskogo izsledovaniia beregov Bielaia moria. (Vserossiiskoe mineralogicheskoe obshchestvo, Leningrad. Zapiski, 1903. Ser. 2, chast' 40, vyp. 2, p. 211-20) **Title tr.:** A brief report on the results of a mineralogical and petrographic investigation of the coast of the White Sea.

*Contains* a preliminary report on mineralogical content and petrographic structure of the rocks on the southern (Karelian) and northern (Kibirinsk) coast of Kandalaksha Bay (White Sea), based on more than 500 optical determinations of the collected material. The metamorphosis of the rocks on the southern coast was found to be much more pronounced than that on the northern coast.

**Copy seen:** MH-Z.

**21752. FEDOTOV, D. M.** K faune paukov Murmana i Novoi Zemli. (Akademiia nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1911, pub. 1912. t. 16, p. 449-74, plate) **Title tr.:** On the spider fauna of the Murman coast and Novaya Zemlya.

*Contains* a classified list, with synonyms and localities of 43 species of spiders, most of which are recorded from the Kola Peninsula (1910), with a few from Novaya Zemlya (1907). Bibliography (16 items). **Copy seen:** DLC.

**21753. FEDOTOV, D. M.** Ob izmenchivosti sovremennykh peleispod v sviazi s izucheniem iskopaemykh form. (Akademiia nauk SSSR. Paleontologicheskii institut. Trudy, 1932. t. 2, p. 1-16, 3 plates) **Title tr.:** On variability of recent Peleceypoda in connection with the study of fossil forms.

*Contains* a conchological study of variability of the shells of certain molluscs, especially a marine pelecypod, *Chlamys islandica*, common on the Murman coast; a comparison with fossil forms, and notes

on variability of some other forms.  
Summary in German.

**21761. FENNER, CLARENCE NORMAN, 1870-1949.** The chemical kinetics of the Katmai eruption, part I-II. (American journal of science, Sept.-Oct. 1950. v. 248, p. 593-627, 697-725, 4 plates, map)

Discussion occasioned by skepticism among geologists, of the author's earlier writings on pumices ejected in the Katmai eruption, 1912. Fenner here explores "the possibilities of exothermic reactions in the magma," and indicates "the large quantities of heat that may be developed," gives detailed descriptions of the field relations, petrography, and chemistry of the pumices, also comparisons with effects in other volcanic eruptions. Bibliography (22 items).

21776. FEYLING-HANSEN, ROLF W. Changes of sea-level in West Spitsbergen: a new interpretation. (Geographical journal, Mar. 1950. v. 115, p. 88-92)

Contains criticism of W. G. V. Balchin's interpretation of the shoreline features in Billefjord (Klaas Billen Bay) as presented in his *The raised features of Billefjord and Sassenfjord, West Spitsbergen*, 1941 (see Arctic Bibliography, No. 1005); with a reply by Balchin.

**Copy seen:** DGS; DLC.

21777. FEYLING-HANSEN, ROLF W., and F. A. JØRSTAD. Quaternary fossils from the Sassen-area in Isfjorden, West-Spitsbergen (the marine mollusc fauna). Oslo, J. Dybwad, 1950. 85 p., illus., fold. map, tables, diagrs. (Norsk polarinstitutt. Skrifter nr. 94)

Contains result of observations in the Sassenfjord region during the Norwegian Svalbard Expedition, 1948, by two members of the Upsala University Paleontological Institute: description of the fossils from sand-gravel-shingle material and clay-silt material found in raised beaches; characterization of the localities showing raised morphologic features, fossil complexes, local development of the faunas, terrace measurements, and fossil horizons within sequence of raised beaches; some remarks on ancient driftwood and whole vertebra. Includes in the systematic section, remarks on 55 molluscan species collected, and a tabular enumeration of the 84 Quaternary molluscan species known to have been found on Svalbard; with a bibliography (53 items).

**Copy seen:** DGS.

21778. FIEBER, FRANZ XAVIER, 1807-1872. Die Gattung *Ophthalmicus*, monographisch nach der analytischen Methode bearbeitet. (Wiener entomologische Zeitung, 1861. Bd. 5, nr. 9, p. 266-85) **Title tr.:** Monographic and analytical study of the genus *Ophthalmicus*.

Contains a monographic treatment of the bugs of the hemipterous genus *Ophthalmicus* with a key and description of 37 species, including *O. lapponicus* native to Swedish Lapland.

**Copy seen:** MH-Z.

21779. FIELD, D. S. M. Arctic gems. (Gemmologist, Aug. 1950. v. 19, p. 177-79)

Contains notes on mineral specimens from Canadian localities: Baffin Island, Garnet Island (66°12' N. 84°47' W.) and MacDonald Island (63°42' N. 72°40' W.).

**Copy seen:** DGS.

21780. FIELD, D. S. M. Diamond pipes in Canada. (Canadian mining journal, July 1950. v. 71, no. 7, p. 54-57. illus.)

Popular discussion of the possibility of discovering diamonds in Canada, involving the extent of Pleistocene glaciation, and glacial geology of the Canadian Shield.

**Copy seen:** DGS.

21781. FIELD, JOHN, 2d, and VICTOR E. HALL. Physiological effects of heat

and cold. (Annual review of physiology, 1944. v. 6, p. 69-94)

A review article covering chiefly papers published in the U. S. A. and Great Britain between Aug. 1, 1942 and Aug. 1, 1943. It deals with the effect of temperature on excised tissues and on intact animals; with temperature regulation; hypothermia; hyperthermia. Bibliography (129 items). *Copy seen:* DSG.

**21782. FIELD, WILLIAM OSGOOD, Jr.** A gazetteer of Alaskan glaciers. (American Geophysical Union. Transactions, Aug. 1941. v. 22, pt. 3 (Papers, hydrology), p. 796-99)

"The preparation of a gazetteer of Alaskan glaciers by the Am. Geographical Soc., the Committee on Glaciers of the Am. Geophys. Union and the Intern. Commission on Snow and Ice is reported, which will list and describe the glaciers of Alaska and northwest Canada. Each glacier will be described according to size, direction of flow, area at different elevations, gradient, relationship to other glaciers, and the characteristics of its terminus. Each glacier will be given an identification number based on the latitude and longitude of its terminus."—SIPRE. *Copy seen:* DLC.

**21783. FIELD, WILLIAM OSGOOD, Jr. and CALVIN J. HEUSSER.** Glaciers, historians of climate. (Geographical review, July 1952. v. 42, p. 337-45, illus.)

Contains a note on the Juneau Ice Field Research Project, launched in 1948 for the study of the physical character of the glaciers, the mechanics of ice deformation and glacier regimen, also to gather relevant meteorological, geophysical and biological data. 15 photographs, the majority in color, illustrate aspects of the work, the camp and surroundings, research station, etc. *Copy seen:* DLC.

**21784. FIELD, WILLIAM OSGOOD, Jr.** Glaciological research in Alaska. (In: Alaskan Science Conference . . . 1950. Selected papers, 1952. p. 123-35)

Contains remarks on the study, area and place of Alaskan glaciers among those of the world; the last glacial period in Alaska; outstanding studies and students of Alaskan glaciology; the "new era" of current investigations along three distinct lines (characterized), due to activities since 1948 of the Arctic Institute of North America, the American

Geographical Society and several U. S. government agencies; relation of glaciology to geology, climatology and other fields. Bibliography (62 items).

*Copy seen:* DAI; DLC.

**21785. FIELD, WILLIAM OSGOOD, Jr., and M. M. MILLER.** The Juneau Ice Field Research Project. (Geographical review, Apr. 1950. v. 40, p. 179-90, incl. 4 p. of illus.)

"An experimental program of glaciological studies was initiated in 1948 by the Amer. Geographical Soc. aided by a contract with the Office of Naval Research. Two receding and 2 advancing glaciers flowing into the Taku River Valley originate in the Juneau Ice Field, making integrated research and analysis of a large glacier system possible. A field laboratory was established in the center of the ice field at an elevation of 4100 ft. Accomplishments of the 1949 expedition include: (1) studies of meteorological conditions and solar radiation at high and low levels, (2) gathering of accumulation and ablation data together with measurements of ice movements, (3) examination of the geology and botany of nunataks including the compilation of a detailed map of the area, and (4) experiments with physical properties of ice."—SIPRE. *Copy seen:* DLC.

**21786. FIELD, WILLIAM OSGOOD, Jr.** Report on the northern American glaciers. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. General Assembly, Brussels 1951, t. 1, p. 120-28, table)

Presented by P. D. Baird.

Contains a review of conditions of the glaciers of the American Rocky Mts., Cascades, Sierra Nevada and (p. 121-27) of Alaska; observations cover 2-10 or more preceding years; the factors causing recess, advance and other conditions of the glaciers are briefly noted.

*Copy seen:* CaMAI.

**21787. FIELD, WILLIAM OSGOOD, Jr.** The variations of Alaskan glaciers 1935-1947. (International Geodetic and Geophysical Union. Association of Scientific Hydrology. Assemblée générale d'Oslo, 1948. Procès-verbaux des séances. t. 2. Travaux de la Commission de la Neige et des Glaciers, pub. 1950? p. 277-82)

Report is based on a few detailed studies of terminal portions of some glaciers and on many aerial photographs. It cites the recession of most, and oscil-

lations of several glaciers, (in order) from southeastern Alaska around the coast to south-central Alaska, and east-to-west along the interior ranges.

"The methods of measuring snow depth and density, observing the quality of snow cover, recording the first and last observations of snow, and measuring frost penetration are presented. Instructions for reporting information on local road conditions and measuring ice thickness on inland lakes and streams are included. Snow depth is usually measured with a calibrated wooden rod pressed into the snow until the 0 point is level with the ground surface. Snow density is measured by a cylindrical metal gage, 50 cm. long, which is pressed into the snow. The depth of snow can be read by a scale marked on the outer surface of the cylinder. A shovel is used to lift the cylinder with its snow content. The cylinder is inverted and hooked to the scales. The scales consist of a 48 cm. long brass pipe with a sliding weight and a marker showing the equilibrium point of the scales. The scales are calibrated to measure directly the water content of the snow in mm."—SIPRE.

und Niederschläge in Gletschergebieten. (Geologische Rundschau, 1944. Bd. 34, Heft. 7-8, p. 705-712, diagr.) **Title tr.:** Ice economy of glaciers and precipitation in glacial regions.

"Measurements and methods are presented for establishing mean values of glacier economy over a long period of time and mean effects of climatic factors on glaciers. Glacier economy is determined by the net accumulation above the firn line and the amount of the ice that flows through the firn line in a year. The factors to be determined are the total precipitation and the ablation in the firn area. The amount of ice flowing through the firn line is found by making a cross section of the glacier along the firn line, and by measuring the average annual velocity of the glacier at the firn line. The volume of ice flowing through the firn line is the product of the ice velocity and the area of the profile. Accurate values of ablation on the firn area are obtained by the method, as well as mean values of precipitation which are difficult, if not impossible, to obtain by other methods."—SIPRE. **Copy seen:** DLC.

**21813. FINSTERWALDER, RICHARD, 1899-** . Some comments on glacier flow. (Journal of glaciology, Mar. 1950. v. 1, no. 7, p. 383-88)

"Regular, streaming ice flow exists in most European glaciers. It is characterized by regularity of the streamlines, clear and well formed moraines, and an apparent continuity of movement throughout the whole mass. The velocity increases regularly from margin to center. Block-Schollen movement occurs on rapidly moving glaciers. The ratio of velocity (m/year) to the width varies between  $\frac{1}{4}$  and  $\frac{3}{4}$  compared with ratios of  $\frac{1}{20}$  for slowly moving glaciers. The movement consists of a rapid increase in small marginal zones of high mobility from 0 to the maximum in one and the same reach of the glacier. The ice is brought up to a critical point of stress-strain and the ice breaks into blocks. It is shown that below the critical value, ice behaves like a viscous material and not as a plastic material according to Orowan's theory."—SIPRE. Bibliography (16 items).

**21838. FLETCHER, JOSEPH O., and LAWRENCE S. KOENIG.** Floating ice islands. Headquarters 58th Strategic Reconnaissance Squadron (M) Weather . . . Special report no. 5. Seattle, Wash., Sept. 1951. 37 p. illus., maps (process print.)

Contains an account of three ice islands (designated T<sub>1</sub>, T<sub>2</sub>, T<sub>3</sub>) floating free in the Arctic Basin. Their discovery, characteristic features (considerable size and thickness; regular "corrugated" surface pattern and wedged shape), origin, and movement are described. The islands have been followed by aerial reconnais-

sance T<sub>1</sub> since 1946, T<sub>2</sub>, T<sub>3</sub> since 1950 and their track (from the region of 75°N. 170° W. across the Arctic Basin to Lincoln and McKinley seas) is plotted on map. It is suggested that these islands probably originated on the northern Ellesmere coast, where an ice foot exists closely resembling them. They are only slightly affected by melting and have far smoother surfaces than ordinary pack ice. It is theorized that these differences may be due to the glacial origin and fresh water content of the ice islands.

**Copy seen:** CaMAI.

**21839. FLETCHER, JOSEPH O.** Floating ice islands in the Arctic Ocean. (Tellus, Nov. 1950. v. 2, p. 323-24, incl. illus., *Letters to the editor*)

"Radarscope observations indicated the presence of three ice islands in the Arctic Ocean. The surface of each shows a regular corrugated pattern with troughs and ridges 300-600 ft. apart. A drainage system of rivers about 100-200 ft. wide is superimposed on this pattern. The projection of the ice mass above the water was estimated from 30-100 ft. or more."—SIPRE.

**21840. FLIGHT.** On the ice wagon. (Flight, Sept. 1950. v. 58, p. 346-48 incl. illus.)

"The Rockcliffe Ice Wagon is a R.C.A.F. Canadair North Star used to investigate icing during flight. Full-scale de-icing methods are tried on a dorsal appendage which is a symmetrical airfoil surface, 8 ft. high and 10 ft. chord to a leading edge equipped with de-icing media. The leading edge of the dorsal fin is removable to provide quick changes of de-icing pads. Other surfaces are de-iced by standard pneumatic overshoes. A cyclic-timer system provides sufficient heat to melt ice adhesions at regular intervals. Ambient temperature, water content, and water-droplet size are also studied. Water droplets in clouds are photographed in passing an illuminating unit outside the fuselage."—SIPRE.

**21842. FLINT, H. R.** The second winter's experience on the Alaska Highway; organization for combating snow and ice. (Roads and bridges, July 1944. v. 82, no. 7, p. 41-44, 79, illus.)

Description of maintenance work on the Alaska Highway, 1943-44; snow removal, ice control and maintenance of drainage in ditches and culverts by use of steam. "Snow removal equipment consisted mostly of motor graders, mold-board push plows, V-plows, wings, and rotaries. Materials used for sanding icy road surfaces were fine sand, pit-run gravel, crushed gravel or rock from stock piles, and decomposed granite. Culverts were kept open for drainage by wood or oil fires in half-barrel or barrel stoves at the end of the structure, and steam-thawing units. Blasting, and a one-tooth ripper or grader were used to maintain open ditches."—SIPRE.

**21843. FLINT, H. R.** Winter road maintenance on the Alaska Highway. (Engineering and contract record, Aug. 9, 1944. v. 57, no. 32, p. 30-34 incl. illus.)

"Equipment used for snow removal consisted of motor graders, moldboard push plows, V-plows, wings, and rotaries. Sanding started after the first snowfall and continued throughout the winter. Fine sand, pit-run gravel and crushed gravel or rock from stock piles were used. Drainage was improved by the construction of diversion channels, ditches, and small bridges and culverts. Moss was cleared from the ground above the road to divert small surface flows and produce freezing before the water reached the highway. The water flow through culverts was kept open by barrel stoves placed at the ends of the structures until the arrival of steam thawing units. Flame throwers and blasting were used

to clear culverts and open ditches. Other methods included the use of one-tooth rippers or graders. These methods successfully prevented ice formation over the highway during the winter of 1943."—SIPRE.

**21844. FLINT, MAURICE S.** The Arctic, land of snowmen. Field survey no. 2. London, Bible Churchmen's Missionary Society, 1948. 39 p., illus., map inside front cover.

Author, who was B.C.M.S. missionary at Pond Inlet in northern Baffin Island 1936-41, sketches the Eskimo way of life and the work of Anglican missionaries in their efforts to christianize natives and counteract evil influence of other white men in the North. Typewritten slip pasted on title page notes that B.C.M.S. missions and their personnel on Baffin Island are transferred to the Church of England in Canada Mission Society as from Jan. 1, 1951. *Copy seen:* CaMAL.

**21845. FLINT, MAURICE S.** Operation Canon. A short account of the life and witness of the Reverend John Hudspeth Turner . . . missionary of the Bible Churchmen's Missionary Society in its Eskimo field. London, Bible Churchmen's Missionary Society, 1949. x, 86 p., illus., map on end papers.

Tribute to Canon Turner, Anglican missionary in the Canadian Eastern Arctic from 1929 till his death in 1947. Account of his early life and training, work among Eskimos, building of three mission stations on northern Baffin and Somerset Island, translations, etc.; his sledge journeys totaling about 24,000 miles, covering the northern Baffin Island and the region westward to about 95° W. long. Includes brief account of his shooting accident and removal by Royal Canadian Air Force and Canadian Army paratroopers to Winnipeg, and his death.

glaciers. In Wurm ice was much less extensive. Glaciation attributed to lower temperature. [Perennially] frozen ground post-glacial."—*Meteorological abstracts and bibliography*, July 1950. v. 1, no. 7, p. 463. Brief description is included of glaciated areas in northwestern Siberia, mountains of northeastern Siberia (Verkhoyansk, Chersky, Kolyma or Gydan ranges), Chukotsk Peninsula, arctic coast and islands.

"In Siberia glaciers exist today only in arctic-maritime areas and high-mountains. The position of former glaciers was determined partly by high land and partly by prevailing storm tracks. Moisture from Atlantic, Arctic, and Pacific sources building the glaciers was less abundant than that supplied the Scandinavian ice sheet. Siberian glaciers were thin with small ablation. Multiple glaciation is established. Scandinavian and Siberian ice sheets, while synchronous reached their maxima at different times. Distribution of former glaciers is shown in two accompanying maps."—*Geological Society of America. Bibliography and index of geology*, 1945-1946. v. 2, p. 106.

**21847. FLINT, RICHARD FOSTER, 1902-** . Growth of North American ice sheet during the Wisconsin age. (*Geological Society of America. Bulletin*, 1943. v. 54, p. 325-62)

"Labradorean and Keewatin ice-sheets were separate only in very late Wisconsin before that a single Laurentide sheet existed, originating as valley glaciers in highlands of East Quebec, Labrador and Baffin Island and fed by south and west winds. The ice formed broad low domes caused by exceptional concentrations of snowfall. Cordilleran glacial complex a separate system."—*Meteorological abstracts and bibliography*, July 1950. v. 1, no. 7, p. 462-63.

**Copy seen:** DLC.

**21848. FLINT, RICHARD FOSTER, 1902-** . Highland centers of former glacial outflow in northeastern North America. (*Geological Society of America. Bulletin*, Jan 1951. v. 62, p. 21-37, incl. 2 maps, fold. map)

Review of published literature indicating several highland regions which had local glaciers preceding and following the Laurentide ice sheet of the last ice age. Included are notes on Quebec and central Labrador, the coastal mountains of

Labrador and the eastern Canadian Arctic. *Bibliography* (52 items).

**Copy seen:** DGS.

**21849. FLINT, RICHARD FOSTER, 1902-** . The ice age in the North American Arctic. (*Arctic*, Oct. 1952. v. 5, no. 3, p. 135-52, illus., map)

*Contains* remarks on the glacial and interglacial ages together constituting the Pleistocene epoch inaccurately termed the "ice age." Then follow sections on evidence of glaciation; distribution and types of former glaciers; growth and disappearance of glaciers; evidence of repeated glacial ages; glacial lakes; the postglacial sea and rise of the land; chronology and causes of glaciation; glaciation and life. *Bibliography* (over 30 items). **Copy seen:** CaMAI; DLC.

**21850. FLOHN, HERMANN.** Die Zirkulation der Atmosphäre in den Polargebieten. (*Polarforschung*, 1951. Bd. 3, Jahr. 21, p. 58-64, diagr.) **Title tr.:** Atmospheric circulation in polar regions.

*Contains* discussion of important advances in knowledge made in the last five years from observations of recently established aerological stations in the Arctic and expeditions to the Antarctic: "Most important is the discovery of a cold pole in the free troposphere in about 75° N. 80° W. which governs circulation up to 100 mb, and a secondary pole over Alaska. There is probably a similar but weaker asymmetry over the Antarctic. Polar temperatures are tabulated up to 21 km. A possible connection between tropospheric asymmetry and magnetic poles is mentioned. Troposphere is colder in Antarctic than Arctic, due to weaker meridional exchange. Polar stratosphere temperature, glacial anticyclone and glacial inversion are briefly discussed."—*Meteorological abstracts and bibliography*, Mar. 1952. v. 3, no. 3, p. 212-13. *Bibliography* (10 items).

**21866. FOREST AND OUTDOORS.** Alaska on the wire. (Forest and outdoors, 1943, v. 39, p. 297, illus.)

Contains an account of the construction of the Alaskan Highway telephone line, 1,600 miles long; and includes description of climatic conditions; stages of work, crew, clothing and food of the crew; methods of work and some technical details of the line.

**Copy seen:** DA.

**21867. FOREST AND OUTDOORS.** Forest regions of Canada. (Forest and outdoors, 1942. v. 38, p. 239-42, illus., map)

Contains sections on the effect of climate, soil, animal life and man on the range of forest trees and regional distribution of forests; with brief treatment of the Canadian forest regions, their respective areas, soil, main tree species, production of timber, etc. The boreal forest region, the largest and most important in Canada, which extends into the arctic zone, is included.

**Copy seen:** DA.

**21868. FORMOZOV, ALEKSANDR NIKOLAEVICH.** Kratkii obzor rabot po ekologii ptits i mlekopitaushchikh za dvadtsatiletie (1917-1937 g.). (Zoologicheskii zhurnal, 1937. t. 16, vyp. 5, p. 916-49) **Title tr.:** A brief survey of work on the ecology of birds and mammals for twenty years (1917-37).

Contains an historical survey of the study of the ecology of birds and mammals in the U.S.S.R., with critical review of various books and papers published on the subject and a bibliography (about 400 items) p. 942-49. Data on ecological investigations in the northern regions of the U.S.S.R. are included as

well as some papers with arctic material in the bibliography.

**Copy seen:** MH-Z.

**21869. FORMOZOV, ALEKSANDR NIKOLAEVICH.** Ob osobennostiakh arealov russkikh son' (Myoxidae) i burunduka (*Eutamias asiaticus* Gmel.). Moskovskoe obshchestvo ispytatelei prirody. Bülleten', 1928. Otdel. biol. Novaya seriia, t. 37, vyp. 3-4, p. 205-249, 2 text maps) **Title tr.:** Features of the area of the Russian dormouse (*Myoxidae*) and chipmunk (*Eutamias asiaticus* Gmel.).

Contains a zoogeographic study of the areas of dormice and chipmunks in eastern Europe in relation to the geographic distribution of latifoliate forests (oaks, maples, lindens, etc.) shown on map 1; map 2 indicates the geographic limits of distribution of larch and chipmunk in eastern Europe and Siberia, including the northern region; biocoenosis of foliate forests and taiga is discussed. Summary in French, p. 243-49.

**Copy seen:** DLC; MH-A.

**21870. FORMOZOV, ALEKSANDR NIKOLAEVICH.** Snezhnyi pokrov kak faktor sredy, ego znachenie v zhizni mlekopitaushchikh i ptits SSSR. Moskva, 1946. 141, xi p., illus., text maps. (Moskovskoe obshchestvo ispytatelei prirody. Materialy k poznaniyu fauny i flory SSSR. Otdel. zool. Novaya seriia, vyp. 5 (XX) **Title tr.:** Snow cover as an environmental factor and its importance in the life of mammals and birds of the U.S.S.R.)

"The physical properties and biological influences of snow cover are discussed. Data are presented on the depth and duration of the snow cover in tundra, forest, steppe, desert and mountain areas in the U.S.S.R. This information was gathered from hydro-meteorological services, travelers, and other sources from ancient times to the present. The effect of the snow cover on the habits of mammals and birds is analyzed in an attempt to apply the data for the improvement of living conditions for man in the far north."—SIPRE. The animals' mobility, hunt for food, hibernation are dealt with, as well as distribution and migration of certain mammals including reindeer, and the rôle of snow cover in the history of development of Quaternary fauna. Bibliography (203 items). Summary in French, p. i-xi.

**21878. FORSMAN, BROR.** Weitere Studien über die Rassen von *Jaera albifrons* Leach. (Zoologiska bidrag från Uppsala. 1949. Bd. 27, p. 449-63, illus.) **Title tr.:** Further studies of the races of *Jaera albifrons* Leach.

**Contains** a study of a marine crustacean, *Jaera albifrons*, divided by the author into four subspecies distinguishable only in the adult males, including *J. albifrons albifrons* (Greenland waters), *J. a. ishio-setosa* n. ssp. (White Sea) and *J. a. prachirsuta* n. ssp. (Greenland Sea and West Greenland waters). Summary in English. **Copy seen:** MH-Z.

**21879. FORSSLUND, KARL HERMAN, 1900-**, and **BO TJEDER.** Catalogus insectorum Sueciae, II. Trichoptera. (Opuscula entomologica, 1942). Bd. 7, häft. 3-4, p. 93-107, text map) **Title tr.:** Insect catalog of Sweden, II. Trichoptera.

**Contains** descriptions of two new genera and one new subspecies and tabulated data on distribution of 204 species of caddis flies (Trichoptera) in thirty natural regions of Sweden, including five subdivisions of Swedish Lapland. For other parts, see *Catalogus insectorum Sueciae*, I-.

**Copy seen:** DA; MH-Z.

**21880. FORSSLUND, KARL HERMAN, 1900-**. For Sverige och Norge nya Trichoptera och Neuroptera. (Entomologisk tidskrift, 1930. Årg. 51, häft. 1, p. 83-85) **Title tr.:** Trichoptera and Neuroptera new to Sweden and Norway.

**Contains** a list of 18 species new to the fauna of Sweden and Norway, including six found in Swedish Lapland, with data on their total distribution.

**Copy seen:** DA; MH-Z.

**21881. FORSSLUND, KARL HERMAN, 1900-**. *Lygaeonematus subarcticus* Forssl., *L. pallidus* Konow und *L. stecki*. (Entomologisk tidskrift, 1939. Årg 60, häft. 1-2, p. 105-107, illus.)

**Contains** a comparative taxonomic study of these three closely related sawflies, the first species, *Lygaeonematus subarcticus*, native to Swedish Lapland.

**Copy seen:** DA; MH-Z.

**21882. FORSSLUND, KARL HERMAN, 1900-**. Eine neue Fichten-Blattwespe (*Lygaeonematus subarcticus*

n. sp.) aus Schwedisch-Lappland. (Entomologisk tidskrift, 1936. Årg. 57, häft. 1, p. 14-22, illus.) **Title tr.:** A new pine sawfly (*Lygaeonematus subarcticus* n. sp.) from Swedish Lapland.

**Contains** descriptions of imago and larva of this new sawfly, an enemy to young pines, found in Tärna and Stensele parishes in Swedish Lapland; with illustrations, dimensions and data on biology.

**Copy seen:** DA; MH-Z.

**21883. FORSSLUND, KARL HERMAN, 1900-**. Eine neue melanistische *Neuronia varietal* (Trich.). (Entomologisk tidskrift, 1933. Årg. 54, häft. 1, p. 36) **Title tr.:** A new dark-colored *Neuronia* variety.

**Contains** a description of *Neuronia lapponica hyperborea*, a new dark-colored variety of caddis fly from Swedish Lapland.

**Copy seen:** DA; MH-Z.

**21884. FORSSLUND, KARL HERMAN, 1900-**. Om utbredningen av några skandinaviska Trichoptera. (Entomologisk tidskrift, 1928. Årg. 49, häft. 2, p. 51-59) **Title tr.:** On the distribution of some Scandinavian Trichoptera.

**Contains** a list of about 80 Scandinavian caddis flies with localities and occasional critical notes, including 15 species new to the fauna of Sweden and 14 native to Swedish Lapland. Summary in German.

**Copy seen:** DA; MH-Z.

**21885. FORSSLUND, KARL HERMAN, 1900-**. Revision der Zetterstedtschen Trichopteren aus Lappland. (Entomologisk tidskrift, 1929. Årg. 50, häft. 3-4, p. 185-95) **Title tr.:** Revision of Zetterstedt's Trichoptera from Lapland.

**Contains** a critical revision of caddis flies (Trichoptera) described by Zetterstedt in his *Insecta lapponica*, 1840, q. v., based on the study of his collection in the Entomological Museum of University of Lund, with a list of 53 species of *Phryganea* and three of *Hydroptila*. Critical notes, a list of synonyms, a list of seven species not yet found in Lapland are given, also another list of nine species wrongly recorded from Lapland by Zetterstedt. **Copy seen:** DA; OU.

**21886. FORSSLUND, KARL HERMAN, 1900-**. Svenska myror, 1-10 (Schwedische Ameisen 1-10. (Hym. Formicidae)). (Entomologisk tidskrift,

1947. Årg. 68, häft. 1-2, p. 67-80, illus.) **Title tr.:** Swedish ants, 1-10, Hym. Formicidae.

Contains critical notes and data on Scandinavian and total distribution of ten species of Swedish ants, including five native to Swedish Lapland; bibliography (30 items). Pt. 11-14 of this work was published in 1949 (see below). Summary in German.

**Copy seen:** DA; MH-Z.

**21887. FORSSLUND, KARL HERMAN, 1900-** . Svenska myror, 11-14. Schwedische Ameisen, 11-14. (Hym. Formicidae). (Entomologisk tidskrift, 1949. Årg. 70, häft. 1-2, p. 19-32, illus.) **Title tr.:** Swedish ants, 11-14.

Contains descriptions and data on distribution of four species of Swedish ants, including *Formica uralensis*, occurring in Aeksele and Lycksele Lappmark, and a bibliography (24 items). This is a continuation of the author's work (pt. 1-10) published in 1947, q. v.

**Copy seen:** DA; MH-Z.

**21888. FORSSLUND, KARL HERMAN, 1900-** . Über die Gattung *Autogneta* Hull (Acari, Oribatei). (Zoologiska bidrag från Uppsala, 1947. Bd. 25, p. 111-17, illus.) **Title tr.:** On the genus *Autogneta* Hull.

Contains data on characteristic of the genus *Autogneta*, a table for the determination of the species and descriptions of four species of these mites inhabiting Sweden, including *A. trågårdhi* n. sp. found in Abiskojoek, Torne Lappmark.

**Copy seen:** MH-Z.

**21889. FORSSLUND, KARL HERMAN, 1900-** . Zur Kenntnis der Trichopteren Grönlands. (Entomologisk tidskrift, 1932. Årg. 53, häft. 1, p. 56-59) **Title tr.:** A contribution to the knowledge of Greenland Trichoptera.

Contains a list of nine caddis flies (Trichoptera) from Greenland, deposited in the collections of the State Museum at Stockholm, with critical notes and a description of *Limnophilus ornatus* also known from Canada and Alaska.

**Copy seen:** DA; MH-Z.

**21890. FORSSLUND, KARL HERMAN, 1900-** . Zwei neue *Apotelia*-Arten (Trich., Limnophilidae); vorläufige Mitteilung. (Entomologisk tidskrift, 1930. Årg. 51, häft. 3-4, p. 216-18) **Title tr.:** Two new *Apotelia* species (Trichoptera, Limnophilidae); a preliminary communication.

Contains preliminary descriptions of two new caddis flies, *Apotelia hispida* and *A. auricula* n. spp., the first native to Torne Lappmark in northern Sweden, and Saltdalen, northern Norway, and the second found in Kiruna, Swedish Lapland and the Enontekis region of northern Finland. **Copy seen:** DA; MH-Z.

**21891. FORSTER, R. E., II, and others.** The relationship between total heat exchange and blood flow in the hand at various ambient temperatures. (American journal of physiology, July 1946. v. 146, p. 600-609, 7 fig.) Other authors: B. G. Ferris, Jr., and R. Day.

Contains a study based on data obtained with the "Hand Pletysmo-Calorimeter," a new apparatus which measures blood flow and heat loss in the hand by radiation, convection and evaporation. The measurements were made with the entire body exposed to temperatures of 15° to 38° C.; blood flow as low as 0.15 cc. per 100 cc. of hand tissue was recorded after exposure of the body to cold for several hours. Bibliography (12 items).

**Copy seen:** DLC.

**21892. FORTIER, GUY, and L.-P. DUGAL.** Andrénaline et résistance au froid. (Revue canadienne de biologie, Juillet 1952. v. 11, no. 2, p. 185-89, 2 fig., table) **Title tr.:** Adrenalin and the resistance to cold.

Contains a report on experiments with rats kept at 0° C., which demonstrated that adrenalin alone, or combined with ascorbic acid, has no beneficial effect for resistance and acclimatization to cold. Earlier results on the importance of ascorbic acid in the same conditions are confirmed. Bibliography (9 items). Summary in English.

**Copy seen:** DLC.

**FORTIER, GUY, see also Dugal, L.-P., & G. Fortier.** Ascorbic acid & acclimatization cold in monkeys. 1952. No. 21559.

**FORTIER, GUY, see also Dugal, L.-P., & G. Fortier.** Ascorbic acid & acclimatization cold in monkeys. 1952. (abstract) No. 21560.

**21893. FOSLIE, MIKAL HEGGELUND, 1855-1909.** Algologiske notiser, V. (Norske videnskabers selskab, Trondhjem. Skrifter, 1908, no. 7, p. 1-20) **Title tr.:** Algological notes, V.

Contains critical notes of 19 species of marine algae, including *Lithothamnion*

laeve and *Clathromorphum compactum* from northern Norway, Greenland, Spitsbergen and Ellesmere Island waters. Other parts of this work do not include arctic material.

**Copy seen:** DLC; MH.

**21894. FOSLIE, STEINAR.** Håfjells-  
mulden i Ofoten og dens sedimentære  
jern-mangan-malmer. Søndre Ofotens  
malmforekomster II. Oslo, H. Aschehoug  
& Co., 1949. 129 p. illus., 6 plates, 2  
fold. maps, diagrs. (Norway. Geologiske  
undersøkelse. Nr. 174) **Title tr.:** The  
Håfjell syncline in Ofoten and its sedi-  
mentary iron-manganese ores. Southern  
Ofoten's ore deposits II.

**Contains** an account of stratigraphic  
and structural relations, and of petrologic  
and mineralogic features of what is con-  
sidered to be a Cambro-Silurian series  
(region of 68°30' N. 16°40' E.) in northern  
Norway; this has two widely separated  
iron-bearing horizons, the upper of which  
contains manganiferous zones mainly  
recrystallized to silicates. Summary in  
English.

**Copy seen:** DGS.

**21895. FOSS, M. E.** Kul'turnye svyāzi  
severa vostochnoi Evropy vo II tysā-  
cheletii do nashel' éry. (Sovetskaiā  
étnografiā, 1948. no. 4, p. 23-35, illus.,  
map) **Title tr.:** Cultural links of  
northeastern Europe in the second  
millennium before our era.

**Contains** a review and analysis of  
archeological material of the period and  
area concerned. On this basis the author  
concludes that from the neolithic epoch  
the ancient tribes inhabiting the northern  
half of European Russia did not lead an  
isolated life but were in close cultural  
contact with other groups even across  
considerable distances, with interchange  
of tools, raw materials, etc. Probable  
routes of these exchanges are recon-  
structured, including some in the Kola and  
Arkhangel'sk-Pechora region. Bibliog-  
raphical footnotes. **Copy seen:** DLC.

**21896. FOSS, M. E.** Neoliticheskīe  
kul'tury severa evropelskoi chasti SSSR.  
(Sovetskaiā arkheologiā, 1947. v. 9, p.  
29-46, illus., 3 plates, map) **Title tr.:**  
Neolithic cultures of the North European  
part of the U.S.S.R.

**Contains** a summary of investigations  
conducted during the preceding two  
years in this area. The excavations  
suggest that three material cultures  
existed in the North, between the end of  
the third and the middle of the first

millennium B. C.: (1) the Karelian culture,  
in the area between the White Sea and  
Lake Lodoga; (2) the Belomorska culture,  
east of the former, in the basin of Lake  
Lacha, Vozha and Belye, and (3) the  
Kargopolska culture, along the south-  
eastern shores of the White Sea. A  
description of the finds is given and the  
outstanding characteristics of each of the  
three cultures analyzed and evaluated.  
A synchronization with southern cultures  
indicates that the earliest northern  
coincided with the bronze age, the latest  
with the early iron age. Bibliographical  
footnotes. Summary in French.

**Copy seen:** DLC.

**21897. FOSTER, L. B.** A tourist's  
impression of Canada's North. (Weather,  
London, Aug. 1951. v. 6, no. 8, p. 228-32,  
fig.)

Account of a flight from Nova Scotia to  
Resolute Bay, Cornwallis Island to Goose  
Bay, Labrador in June 1950.

**Copy seen:** DWB.

**FOSTER, W. W.,** see Alpine Club of  
Canada. Mount Logan Expedition.

No. 20026.

**21899. FOX, Sir CYRIL SANKEY.**  
1886- . The mineral resources of Soviet  
Russia. (Mining magazine, Oct. 1950.  
v. 83, p. 201-11, 2 maps, tables)

"A brief review, with an assessment of  
the present position in Russia," including  
brief reference to the Kola Peninsula, and  
to the coal, gold and nickel deposits of  
the Soviet North.

**Copy seen:** DGS.

**21900. FRANCK, HARRY ALVERSON.**  
1881- . A Scandinavian summer; im-

pressions of five months in Denmark, Finland, Sweden, Norway, and Iceland. New York, The Century Co., 1930. xvi, 397 p. plates, map on lining papers.

*Contains impressions of an American tourist's trip, including Swedish Lapland (p. 215-43, 6 plates): his visit to the Lapp summer encampment of Aitejokk (near Gällivare), spending the night in a Lapp school-house; comment on costumes, reindeer herd, the religious sect of Laestadius and its repressive effect on the Lapps. Author found Lapps timid and self-contained, never admitting surprise or seeming impressed by foreign things. "Hay socks" are said to be still preferred, woolen socks being used only for sleep. Electrification, motorboats, and tourist camp-hotels in Lapland are noted, and mining of iron at Kiruna.*

*Copy seen:* DLC.

**21901. FRANKCOM, C. E. N.** Shipping operations in the Hudson Bay. (Marine observer, Oct. 1952. v. 22, no. 158, p. 219-22, 2 sketch maps)

*Contains remarks on potential importance of Churchill as a port (only 180 miles farther from Liverpool than the principal Canadian port of Montreal), and on the use of the Hudson Bay route as governed by physical conditions, notably ice and fog. Data are presented on ice conditions to show the port's open season extended from Aug. 10-Sept. 30 in 1933 to July 26-Oct. 10 in 1950. New navigation aids (gyro compass, radar, etc.) and facilities provided by Canadian Government are stated so to have improved conditions as to effect marked reduction in marine insurance rates for the Bay route. Meteorological conditions are noted and average ice conditions for Feb. and Aug. indicated on sketch maps. This paper is based largely on the Great Britain Commonwealth Shipping Committee tenth (1951) Report on Hudson Bay marine insurance rates issued by Great Britain Commonwealth Shipping Committee.*

*Copy seen:* DLC.

**21902. FRANTZ, JOHN A., and J. L. A. ROTH.** Metabolic balances in the cold environment, 2. Energy exchanges. (Federation proceedings, Mar. 1948. v. 7, p. 35-36)

*Contains a report on energy exchange in human subjects, living at a temperature of -32° C. and on a U.S.A.F. emergency ration, with fasting individuals providing controls. The experiments showed that*

"food appears to be of secondary importance to the adequacy of clothing and sleeping-bag for survival in low ambient temperatures."

**21907. FRASER, J. KEITH.** Canadian Ice Distribution Survey. (Arctic circular, Oct. 1952, v. 5, no. 5, p. 56; reprinted in Arctic, Oct. 1952, v. 5, no. 3, p. 195)

Contains brief account of a project of the Geographical Branch of the Dept. of Mines and Technical Surveys of Canada begun in 1948. The project concerns floating ice in Beaufort Sea, Canadian Arctic Islands waters, Hudson and James Bays, Baffin Bay-Davis Strait, Labrador coast, also more southerly waters, and (later) inland waters. Data on ice conditions have been extracted from reports published prior to 1905, and information filed according to regions; 2,700 references have been tabulated on cards, which have been distributed to interested agencies and organizations.

**Copy seen:** CaMAI; DLC.

**21908. FRAZER, J. KEITH.** Identification of Petitot's Rivière La Roncière-le Noury. (Arctic, Dec. 1952. v. 5, no. 4, p. 224-34, illus., maps)

Contains a study of explorations in the Horton and Hornaday River regions of northern Mackenzie District. Evidence is presented to suggest that the river discovered and mapped (excepting lower reaches) by the Oblate missionary Émile Petitot in 1868 is identical with the Hornaday. The latter, discovered by A. J. Stone in 1900 was explored only near its effluence into Darnley Bay. Recent mapping from aerial photographs show the source of the Hornaday (68°40' N. 120°20' W.) and features of its course as similar to those recorded for La Roncière-le Noury by Petitot in his *Géographie de l'Athabaskaw-Mackenzie* . . . 1875 (Arctic Bibliography, No. 13406).

Holms und Amdrups Land (Nordostgrönland). København, C. A. Reitzel, 1950.

97 p., 6 l., illus. (incl. 3 maps), 6 plates, maps. (Meddelelser om Grønland, Bd. 126, no. 3. Issued also as: Copenhagen, Universitet. Mineralogisk-geologiske museum. Communications géologiques. No. 37) **Title tr.:** The stratigraphy and late Paleozoic brachiopod fauna of Holms and Amdrups Land (northeastern Greenland).

Results of the Dansk Nordostgrönlands ekspedition (Danish Northeast Greenland Expedition) 1938-39, making investigations in the land region lying (roughly) between 80°-81° N. 74°20'-78°20' W. under the leadership of E. Munck and E. Knuth. Following a description of six profiles in both Holms and Amdrups Land, based on studies and sketches of Eigil Nielsen, 1938-39, and a discussion of the profiles' correlation, the author describes thirty species of fossil brachiopods; and analyzes the character of the two Permo-Carboniferous marine series occurring in the region on the basis of the described fauna. He correlates the series with the late Paleozoic of southeastern Greenland. West Spitsbergen, Bjørnøya, and Novaya Zemlya; discusses their age in relation to the Russian late Paleozoic and the "middle" carboniferous of Bjørnøya and West Spitsbergen, concluding that both the series are Permian. Finally he remarks on the paleogeography and age of late Paleozoic orogenic phases in the region of East Greenland-West Spitsbergen-Bjørnøya. Bibliography (58 items).

Results of study of ten normal subjects exposed for two hours to temperatures of 20° C. and 15° C. Skin temperatures fall markedly at both temperatures; rectal temperatures show little change for an hour, then fall more rapidly at 20° C. than at 15° C., individuals vary significantly especially in the extremities; rate of fall of skin temperature is independent of initial level of rectal temperature; and the average levels of skin and rectal temperatures are slightly related to each other but in a negative direction.—From authors' summary.

During 1951 the Canadian Dept. of Agriculture sent eleven field parties consisting of entomologists and botanists to Alaska (4), Northwest Territories (5), Yukon (1), Newfoundland (1) "to continue studies of the distribution, relative abundance, and ecology of northern biting flies begun in 1947 . . . and to collect material for the Canadian National Collection of Insects as well as specimens for the Division of Botany's collection of plants. Approximately 125,000 insects and 7000 plants were obtained. These include significant distributional extensions of many species, as well as some new species and subspecies." Brief notes are given on the field work at each locality, 38 in all having been investigated in the course of the Northern Insect Survey 1947-51.

*Contains* summary (by the coordinator) of the Northern Insect Survey, begun in 1947 to study distribution, relative abundance and biology of species of biting flies and other insects in arctic and subarctic Canada. By the end of 1952, 46 areas will have been investigated; each year approx. 125,000 specimens are

collected, including several new species and many extensions of previously known ranges. On the basis of these collections, the close relationship between the palaearctic and nearctic insect faunas, the tundra and forest division, the large variations within the species, etc. are briefly discussed.

**FRIDOLIN, VLADIMIR IUL'EVICH**, *see also* Akademiia nauk SSSR. Khibinskaiia gornaiia stantsiia. Khibinskaiia gornaiia stantsiia. 1934. No. 20100.

**21948. FRIDRIKSSON, ARNI.** Herring marking in European waters. (*Nature*, Apr. 15, 1950. v. 165, p. 593-94, 2 diags.)

Report (in brief) on tagging carried out during 1948-49, in northern Icelandic and southern Norwegian waters, with mention of returns and possible conclusions to be drawn from continued work.

*Copy seen:* DLC.

**FRIEDLANDER, MAE**, *see* Bierman, W., & M. Friedlander. Penetrative effect cold. 1940. No. 20678.

**21949. FRIEDMAN, NATHAN BARUCH, 1911-**, and **K. LANGE.** The pathology of experimental frostbite. (*Federation proceedings*, Mar. 1946. v. 5, p. 220-221)

Abstract of observations on "pathologic changes in the tissues of rabbits subjected to severe cold." These observations "support the view that the fundamental lesions in frostbite involve the vessels."

*Copy seen:* DLC.

**21950. FRIEDMAN, NATHAN BARUCH, 1911-**, and **R. A. KRITZLER.** The pathology of high-altitude frostbite. (*American journal of pathology*, Mar. 1947. v. 23, p. 173-87, incl. 16 fig. on 4 plates)

*Contains* study of morbid anatomy of frostbite incurred by airmen exposed to severe cold at high altitudes: clinical data on 20 patients and microscopic-pathological findings are presented. Most prominent pathological changes were agglutinative thrombosis and vascular lesions; gangrene probably resulted from ischemia, not from freezing. Comparison

with trench foot suggests that tissue reactions to cold exhibit a basic similarity. Bibliography (19 items).

*Copy seen:* DLC.

**21951. FRIEDMAN, NATHAN BARUCH, 1911-** . The reactions of tissue to cold; the pathology of frostbite, high altitude frostbite, trench foot and immersion foot. (*American journal of clinical pathology*, Oct. 1946. v. 16, p. 634-39, 9 illus.)

*Contains* a report on pathologic anatomy and pathogenesis of cold injuries, based on study of more than 100 cases of local injury usually to the extremities, in World War II. No essential dissimilarities were found between lesions of trench foot and of high altitude frostbite. Agglutinative thrombosis is considered the main cause of gangrene in severe lesions but some of the changes may be the direct effect of cold. Bibliography (19 items).

**21962. FRISTRUP, BØRGE.** Danish expedition to Peary Land, 1947-1950. (Geographical review, Jan. 1952. v. 42, p. 87-97 incl. illus., tables, map)

"The objective of the Danish Peary Land Expedition of 1947-1950 was the scientific exploration of the area. A reconnaissance party was sent out in the summer of 1947. Three Catalina flying boats transported 38 tons of goods, the winter party and 20 huskies in the following summer. The winter party was relieved in the summer of 1949 and seven men wintered in 1949-50. The expedition was evacuated in August 1950. Meteorological observations were made every three hrs. in addition to the self-recording measurements. The temperatures ranged between  $-31.3^{\circ}$  C and  $6.0^{\circ}$  C in 1948-1949 and  $-32.0^{\circ}$  C and  $6.4^{\circ}$  C in 1949-50. Pilot balloon observations were influenced by local conditions. Gales and blizzards were frequent in 1948-49. Wind velocities above 30 m./sec. were frequently measured, and some gusts reached 40 m./sec. There were few heavy storms in 1949-50. Glaciological investigations were conducted on Chr. Erichsen Brae, an icecap type glacier extending from 1100 m. to 1300 m. above the sea level. The northern and eastern parts of the glacier were surveyed with a Wild T II theodolite. An annual accumulation of 114 mm. and an ablation of 162 mm. of water were recorded on the highest part of the glacier with a row of stakes. Evaporation was measured by determining the loss of weight of pans filled with ice and snow placed level with the snow surface. The front of the glacier retreated nearly 70 m. from Aug. 1947 to Aug. 1949. Several other shrinking glaciers were investigated."—SIPRE.

**21963. FRISTRUP, BØRGE.** Grönländische Wirtschaft; einige Grundzüge der Wirtschaftsgeographie einer arktischen Kolonie. (Erde; Zeitschrift der Gesellschaft für Erdkunde zu Berlin (Jahres-Heft), 1952. p. 33-52, map) *Title tr.:* The economy of Greenland; some characteristics of the economic geography of an arctic colony.

*Contains* a brief account of the population and its distribution, and of fishing, livestock raising and mining in West Greenland, concluding with some dis-

cussion of Danish administrative policies in relation to the economy of the Greenlanders.

*Copy seen:* DGS.

**21964. FRISTRUP, BØRGE.** Die Klimaänderungen in der Arktis und ihre Bedeutung besonders für Grönland. (Erdkunde, Okt. 1952. Bd. 6, p. 201-212, illus. incl. 7 sketch maps) *Title tr.:* Climatic variations in the Arctic and their significance, with special reference to Greenland.

*Contains* some discussion of the effects produced by amelioration of arctic climate upon sea ice, glacier regime and upon fisheries, sealing and whaling in Greenland; the introduction of livestock raising to compensate in the economy for the decreasing sealing industry is noted. Bibliography (61 items).

*Copy seen:* DGS.

**21965. FRISTRUP, BØRGE.** Peary Land. (Kulturgeografi, Aug. 1950. Årgang 2, nr. 4., p. 153-56)

*Contains* a short description (in Danish) of Peary Land, investigated by the Danish Peary Land Expedition in 1947-50, with the author as glaciologist. Notes are given on geology, climate, glaciers, vegetation and animal life. Seven photographs show Eskimo tent rings, aircraft on Brønlund Fjord, winter quarters, arctic desert landscape in southern Peary Land, muskoxen and glacier in Heilprin Land.

*Copy seen:* CaMAI; DLC.

**21966. FRISTRUP, BØRGE.** Peary Land. En foreløbig redegørelse for geografisk arbejde paa Dansk Peary Land expedition. (Geografisk tidsskrift, 1948-1949, pub. 1950. Bd. 49, p. 41-66, illus. fold. map) *Title tr.:* Peary Land. A preliminary report on the geographical work of the Danish Peary Land Expedition.

*Contains* a résumé of the geographic limits and naming of Peary Land,  $81^{\circ}30'-83^{\circ}30'$  N.  $20^{\circ}-45^{\circ}$  W.; an account of the preliminary expedition in 1947 and subsequent work during 1948-1949, the seaplane transportation; brief report on the topography, meteorology, and glaciology.

*Copy seen:* DGS.

**21967. FRISTRUP, BØRGE.** Physical geography of Peary Land I. Meteorological observations for Jørgen Brønlunds Fjord. København, C. A. Reitzel, 1952. 143 p. incl. tables. (Meddelelser om Grønland. Bd. 127, no. 4) Results of the Dansk Pearyland-Ekspedition, 1947-1950; leader: Eigil Knuth.

Contains tabulations of synoptic observations (taken at 00, 03, 06, 09, 12, 15, 18, and 21 hours GMT) of pressure, wind direction and velocity, air temperature, relative humidity, visibility, weather, past weather, clouds, barometric tendency, and precipitation, from Aug. 1, 1948-Aug. 19, 1950, at 82°10.4' N. 30°29.8' W. on the south coast of Jørgen Brønlunds Fjord, North Greenland.

**21968. FRITZ, MILO H.** Corneal opacities among Alaska natives. (Alaska's health, Dec. 1947. v. 5, no. 12, p. [3-7])

Based on a six-week ophthalmologic survey of 400-odd natives (90 percent Eskimo, 10 percent Indians) along the arctic coast and in the Yukon and Kuskokwim River valleys of western Alaska, June-Aug. 1947. Of the number seen, 127 had corneal opacities. Author discusses medical causes, and contributing factors from poor living conditions; lists recommendations beyond the treatment then being used to combat the disease.

**Copy seen:** DLC.

**21969. FRITZ, MILO H., and PHILLIPS THYGESON.** Phlyctenular keratoconjunctivitis among Alaskan Indians and Eskimos. (U. S. Public Health Service. Public health reports, 1951. v. 66, no. 29, p. 934-39, tables, diagr.)

Contains data on earlier work on the disease in Alaska; clinical picture of phlyctenulosis and statistics, prevalence, etc. The author, like many others, assumes that the tuberculosis bacillus is the etiological factor in the disease and reports dramatic results with cortisone, topically applied. Bibliography (5 items).

**Copy seen:** DLC.

**21970. FRÖDERSTRÖM, HARALD.** The genus *Sedum* L.; a systematic essay, parts I-IV. Göteborg, Elanders boktr. 1930-36. 75 p., illus., 28 plates; 111 p. illus., 65 plates; 126 p., illus., 67 plates; 262 p., illus., 115 plates. (Göteborg, Sweden. Botaniska trädgård. Meddelanden t. 5, bihang; (II) 1931, t. 6, bihang; (III) 1932, t. 7, bihang; (IV)

1935, pub. 1936, t. 10, bihang). The four parts were also issued together as a single volume.

Contains a discussion of the genus *Sedum* (stonecrop or orpine), its systematic position, and a critical revision of all known species, with Latin descriptions of many new species, synonymy, critical notes; a list of twenty-nine important collectors of *Sedum* in China and Mexico, a key to the species (IV: p. 199-215); a bibliography (over 600 items, IV: p. 216-37), and index of the species (IV: p. 238-60); includes some species native to arctic regions of Scandinavia, Siberia, Alaska and Greenland.

**Copy seen:** DA; MH-A.

**21971. FROHNE, W. C., and R. B. WILLIAMS.** Notes on snipe flies of the genus *Symphoromyia* in Alaska. (Mosquito news, Mar. 1951. v. 11, no. 1, p. 32-33)

Contains brief information on the abundance and distribution of two snipe flies, the most common species of the genus *S. atripes* Bigot and *S. kincaidi* Aldrich whose females are bad biters of man. Observations (over the previous four years) on abundance and biting habits refer to Juneau. Differences between the two species are given. Bibliography (2 items).

**Copy seen:** DSG.

**21972. FROST, ROBERT E. and O. W. MINTZER.** Influence of topographic position in airphoto identification of permafrost. (National Research Council. Bulletin, Nov. 1950. No. 28, p. 100-121, incl. illus., diagrs.)

"The development of the use of aerial photographs in the determination of the presence or absence of detrimental permafrost is discussed. . . . Permafrost is defined and the factors affecting the existence or non-existence of permafrost are given in relation to the climatic influence and the topographic position. The topographic types discussed include uplands, transition zones and valley fill, terraces, and flood plains. The essential airphoto-identification elements are delineated. It is concluded that the influence of topographic position is the most important factor in identification of permafrost in subarctic regions."—Author's abstract. Bibliography (31 items).

**Copy seen:** DLC.

**21973. FROST, ROBERT E.** Interpretation of permafrost features from air-

photos. (National Research Council. Highway Research Board. Frost action in soils, a symposium. *Ils*: Special report, 1952. no. 2 (N. R. C. pub. 213) p. 223-46, illus.)

Contains a report of field observations made by Purdue University parties in arctic and subarctic regions of Alaska, on the use of aerial photography for predicting the presence of permafrost and certain of its features. Includes descriptions of these features and indicates that airphotos are useful for prediction of soil textures and permafrost conditions. "The presence of permafrost is indicated by landform, drainage pattern, erosion features, gully characteristics, vegetation, and color tones. Detrital types of permafrost can be identified by recognizing features such as soil polygons and geometric patterns formed by frost action. Depressed-center polygons and raised-center polygons vary in size from 15 ft. to about 200 ft. in diameter and may have 4 to 6 sides with 5 being most common. Pingos or frost mounds, elongated lakes in lower coastal plain areas, thermokarst lakes formed by thawing of large ice masses, earth runs on sides of hills, and mud boils, hummocks, small frost mounds, are characteristic features of permafrost areas."—SIPRE. Bibliography (70 items).

Survey, 1948-50. (Polar record, July 1952. v. 6, no. 44, p. 508-511, tables)

Contains an account of the rations, evolved from those used by the British Graham Land Expedition (1934-37), and used successfully in long distance dog-sledge trips; includes chemical analysis of the rations, modifications, day's menu; subjective response to the rations, etc.

**Copy seen:** CaMAI; DLC.

**21980. FUHRMAN, FREDERICK A.** The effect of body temperature on drug action. (Physiological reviews, Apr. 1946. v. 26, p. 247-74)

Contains a review article dealing with vertebrates and covering the more recent literature; in some cases results obtained at varied environmental temperatures and on isolated preparations are included; both homeotherms and poikilotherms are dealt with and compared; effects of drugs during hibernation are also included. Bibliography (about 225 items).

**Copy seen:** DLC.

**21981. FUHRMAN, FREDERICK A.** The effect of rutin in experimental frostbite. (Federation proceedings, Mar. 1948. v. 7, p. 38)

Contains an abstract on experiments with rutin, given to rabbits by stomach tube prior to, or immediately following severe, local frostbite; the extent of tissue loss due to cold injury was much less in the treated animals than in controls; rutin appears to act by altering the pattern of local blood flow.

**Copy seen:** DLC.

**21982. FUHRMAN, FREDERICK A., and J. M. CRISMON.** The influence of acute hypothermia on the rate of oxygen consumption and glycogen content of the liver and on blood glucose. (American journal of physiology, June 1947. v. 149, p. 552-60)

Contains an account of experiments with adult rats, cooled until their respiration ceased. Oxygen consumption of liver was not significantly decreased as the result of cooling; liver glycogen was rapidly utilized during hypothermia; in animals provided with ample stores of carbohydrate before cooling, blood glucose increased during early hypothermia and remained elevated; in fasted animals and in slowly cooled, fed, animals, blood glucose was maintained or fell during the course of cooling. Animals fasted 24 hrs. could be cooled to a mean rectal temperature of 9.6° C. while fed animals could

be cooled only to 14.3° C. before respiration ceased. Bibliography (27 items).

**21985. FUHRMAN, FREDERICK A., and J. M. CRISMON.** Studies on gangrene following cold injury, III. Edema following cold injury: its magnitude and the composition and sources of edema fluid. (Journal of clinical investigation, Mar. 1947. v. 26, p. 245-58, 6 fig.)

Contains data on the commencement of swelling, its maximum and decrease; subcutaneous tissue pressure; composition of edema fluid; changes in blood composition during swelling. Bibliography (24 items).

**Copy seen:** DLC.

**21986. FUHRMAN, FREDERICK A., and J. M. CRISMON.** Studies on gangrene following cold injury, VII. Treatment of cold injury by means of immediate rapid warming. (Journal of clinical investigation, May 1947. v. 26, p. 476-85, 4 fig.)

Contains a study on the effectiveness of rapid warming in preventing gangrene in frostbitten ears and legs of rabbits. "In the majority of cases this treatment resulted in complete preservation of the frostbitten ear" and feet. The beneficial

effect of rapid warming is attributed to an "alteration in the pattern of local blood flow in the frostbitten part." It is suggested that rapid warming should be supplemented by measures designed to control edema. Bibliography (16 items).

**Copy seen:** DLC.

**21987. FUHRMAN, FREDERICK A., and J. M. CRISMON.** Studies on gangrene following cold injury, IX. The effect of rutin and other chemical agents on the course of experimental frostbite in rabbits. (Journal of clinical investigation, May 1948. v. 27, pt. 1, p. 364-71)

*Contains a study on severe frostbite on ears and feet of rabbits. Rutin, 50-100 mgm. per kg. per day given by stomach tube, limited considerably the extent of gangrene in the feet, but not in the ears; it delayed the development of stasis and apparently altered the pattern of blood flow through the capillary bed; procaine block delayed, but did not prevent gangrene. The following drugs and means were ineffective in preventing gangrene following frostbite: vasodilators, vasoconstrictors, anticoagulants, steroid hormones, whole blood transfusion, administration of plasma albumin and sodium chloride solutions. Bibliography (36 items).*

**21988. FUHRMAN, RALPH E.** Methods and equipment for pit latrine con-

struction in frozen ground. A report to the Subcommittee on Waste Disposal. (National Research Council. Committee on Sanitary Engineering and Environment. Bulletin, 1949, p. 220-22)

*Contains instructions on application, construction, operation and cleaning of pit latrines; summary and recommendation. "Three methods of pit construction in permafrost regions are reviewed: thawing the ground with aeroil burners to make hand digging possible; burning coke on the ground and digging the thawed ground by hand; and digging with pneumatically operated clay spades equipped with blades 6 to 7 in. wide. The first 2 methods were slow, cumbersome, and unreliable. Pneumatic equipment permitted digging with comparative ease without necessitating the removal of moisture. A sufficiently large pit was dug in 4 hrs. The cleaning of pits from waste was accomplished by thawing with steam and removing the contents with diaphragm pumps. Agitation of the deposits in the pit to limit stalagmite growth is recommended."—SIPRE.*

On the basis of works published since 1922, the author states the modern concept of the relation of frost cracks to ice wedges; defines wedge fissures, frost cracks, ice wedges and ice lenses; describes the growth and form of ice wedges under varying conditions, and the formation of ice lenses; then he presents the problem of fossilization of ice wedges which requires their classification into epigenetic and syngenetic, intact or disturbed forms; finally he indicates the significance of this knowledge in the study of previous climates. Bibliography (46 items).

"Ice wedges form in the deeper ground areas as a result of repeated heavy frosts. Such wedges may be maintained in a fossil condition as indicators of paleoclimatic conditions. The various ice wedge forms originate under differing requirements while growing. Changing penetration depths of the ground frost and the changing sediment cover on the ground determine ice wedge formations to a large extent. Epigenetic wedges origi-

nate in case of an unchanging ground surface. Syngenetic wedges, which are long and narrow, form when the ground surface is covered with sediments during frost. Undisturbed and disturbed ice wedges form during fossilization depending upon the type of sediment present. The duration of a frost period may be determined by the width of undisturbed samples of ice wedges."—SIPRE.

**22017. GAPANOVICH, IVAN IVANOVICH, 1891-** . Rossiia v severo-vostochnoi Azii. Chast' 1, Kolonizatsiia severa v proshlom i nastoiashchem. Chast' 2, Bogatstva severa, ikh ekspluatatsiia i vozmozhnosti. Pekin, Pekinskoi Russkoi Missii, 1933-34. x, 186 p. map; ix, 197 p., fold. map. **Title tr.:** Russia in northeastern Asia. Part 1, Colonization of the North, past and present. Part 2, Resources of the North, their exploitation and development.

Contains in the first part, a description of the Russian Northeast, covering the Okhotsk coast, Kamchatka Peninsula, Anadyr'land, and the arctic coast. The seacoast and its navigation hazards, the volcanoes, mountains, climate, flora and fauna are surveyed. History of colonization by the Russians since 1648 is outlined and the population in 1925 indicated: Chukchis 13,000, Koryaks 7,900, Kamchadals 2,200, Tungus 2,000, Yakuts 1,000, Eskimos 1,400, Aleuts 600, Lamuts 300, Chuvantzy 500, Yukaghirs 100; Russians about 12,000 (settled near Petropavlosk and in the valley of the Kamchatka). The Paleo-Asiatics are treated in detail: their fishing economy (on the coast), reindeer-breeding (in the mountain tundra), hunting (Kamchadals are noted as sable hunters); their social organization (a large family), status of women (comparatively independent), belief in numerous spirits and shamanism. Demoralization of the

natives is attributed to Russians and the Japanese fishermen (about 30,000) and American whale-hunters and merchants mentioned as factors in the economy of the area, the Americans having considerable influence, especially in the Chukotsk Peninsula, where the Chukchis like their trade goods and know their language better than Russian. The strategic position of Kamchatka is noted. Administration and government is outlined including that among native groups.

Part 2 deals with recent economic conditions: hunting and fur trade (statistics on p. 14); whale, walrus and seal hunting, reindeer-breeding among the Koryaks (about 8 million head in Kamchatka); the fishing industry (salmon the most important fish, statistics on p. 46-47); the mining industry (gold mines in Okhotsk, surface coal in Kamchatka, oil); the Commander Islands fur trade (sea otter, fur seal, blue fox, handled by Aleuts, a small tribe of about 400); cattle and horse-breeding in the Kamchatka valley; dog-breeding (more than 30,000 dogs consuming about 8 million fish a year. The difficulties of communication by sea and land are touched upon and the sledge noted as the best means of transport. Chapter 7 (p. 161-73) deals with Alaska, and the final chapter with colonial problems and policies in the Russian North. Summary in English pt. 1, p. 174-81; pt. 2, p. 190-197.

*Stressing the local working problems due to the size, climate and transportation difficulties of the Territory, the authors give an outline of the activities*

of a mobile health-truck which carries public health facilities to isolated areas, especially in tuberculosis. Lack of hospital beds, unsanitary conditions, and malnutrition are noted as aiding the advance of this disease. Recommendations follow. **Copy seen:** DSG.

**22050. GEIGER, RUDOLF, 1894-** . The climate near the ground. A translation by Milroy N. Stewart and others of the 2d German editions of "Das Klima der bodennahen Luftschicht" with revisions and enlargements by the author. Cambridge, published for the Blue Hill Meteorological Observatory by Harvard Univ. Press, 1950. xxi, 482 p., illus., maps, tables, diagrs.

An extensive monograph with recent additions by the author, making it equivalent to the third German edition. Following an introductory chapter on microclimate and microclimatic research, part I deals with the microclimate existing near the ground by virtue of proximity to the ground surface, with sections on: heat exchange, temperature relationships and other meteorological elements near the ground; influence of the ground itself on the climate near it. Part II deals with microclimate in its relation to topography, plants, animals and man, with sections on: the influence of topography, and plant cover; relation of animate creatures and man to microclimate. The following chapters deal specifically with cold weather conditions: 16, the air layer near snow (p. 164-74); 18, cold air floods and cold air dams (p. 195-203); 20, cold air winds, down-slope, down-valley and glacier winds (p. 211-14); 39, the conscious modification of the microclimate by man (p. 386-95); 40, destructive frost as microclimatic phenomenon (p. 396-402); 41, the battle against destructive frost (p. 403-412). Bibliography (about 850 items). The first edition of this book appeared in 1927 and was translated into English by John Leighly.

**22055. GELLHORN, E., and J. FELD-MAN.** The influence of cold and heat on the vago-insulin and the sympathetico-adrenal systems. (American journal of physiology, July 1941. v. 133, p. 670-75)

*Contains* a study on normal (A), adreno-demedullated (B), vagotomized (C), and adreno-demedullated-vagotomized (D) rats exposed to cold or heat. On exposure to cold, group A showed hyperglycemia, B showed hypoglycemia and D showed no significant change in blood sugar. The experiments indicated that cold acts on both vago-insulin and sympathetico-adrenal systems. Bibliography (10 items). **Copy seen: DLC.**

**22056. GELTING, PAUL EMILELLIOT, 1905-** . Spørgsmaalet om Grønlands renbestand. (Grønlandsposten, Dec. 1947. Aargang 6, nr. 7, p. 116-18) **Title tr.:** The question of Greenland's reindeer stock.

*Discussion* of the problem of protecting and building the existing stock and importing domesticated reindeer.

**Copy seen: DLC.**

**22057. GENDEL, BENJAMIN R., and J. E. BENJAMIN.** Paroxysmal cold hemoglobinuria. (Connecticut state medical journal, May 1946. v. 10, no. 5, p. 406-408)

*Contains* a report of two cases, males with late syphilis, 25 and 34 years old. Cold hemoglobinuria was present 17 and 8 years respectively, without other deleterious effects. The patients did not respond to standard treatment with mapharsen and bismuth, nor to penicillin. Bibliography (13 items).

**Copy seen: DLC.**

**22058. GENETZ, ARVID, 1848-1915.** Kuollan lapin murteiden sanakirja ynnä kielenäytteitä. Helsingfors, 1891. xlv, 291 p. (Bidrag till kännedom af Finlands natur och folk, Häfte 50) **Title tr.:** A glossary of terms from the dialects spoken by the Kola Lapps and linguistic examples.

*Contains* introduction (in Finnish and German) outlining phonetics, and noting other published results of the author's sojourn in Russian Lapland in July-Dec. 1876; also (in German only, p. xiii-xlv) narrative of his trip with his ethnographic observations. He traveled to Solovetskiy Island and Arkhangel'sk, stopped at Kola and Ponoy, thence through the central and southern parts of the peninsula (Lovozero - Imandra -

Kandalaksha). A description is given of the Tersk Lapps (about 450 in number with 5 to 6 thousand head of reindeer, their material culture, a case of "arctic hysteria", etc.) and of the Semioistrovsk Lapps, particularly their religious practices and beliefs. Then follows trilingual glossary (Kola Lappish-Finnish-German) of 2,077 words, Finnish-German-annotated list of Lappish geographic names; German, also Finnish word indexes; examples (15 tales, 41 riddles, 2 songs) of linguistic usage in four dialects with German translation.

*This work* was reviewed extensively by K. B. Wiklund: *Das Kolalappische Wörterbuch von A. Genetz* (Suomalais-ugrilainen seura. Aikakauskirja, 1892. v. 10, p. 217-46). Wiklund concludes that the vocabulary represents a good collection of material and is useful to science, but that its arrangement is impractical and Genetz's reconstructions of the basic forms of the Lappish words often are unreliable. **Copy seen: DLC.**

"The snow cover in the Cape Shmidt [68°58' N. 179°24' E.] region reaches an

average thickness of 26 cm. in Oct. and a maximum thickness of 84 cm. during mid-March. Precipitation is followed by strong winds which drift snow to 2-m. depths. Experiments with a snow dynamometer showed that the snowdrift resistance to compression varied with depth ranging from 0.8 kg./cm<sup>2</sup> at the surface to 1.4 kg./cm<sup>2</sup> at a depth of 5 cm. The resistances of snow crusts ranged from 13.5 to 21.0 kg./cm<sup>2</sup>. Fall and Spring air temperatures, snow surface, and ground surface temperatures indicated that the temperatures of the inner layers of snow gradually decrease during the winter until a minimum was reached in mid-March. Measurements made in October showed air temperatures of -16° C, snow surface temperatures of -19° C, and snow temperatures of -2.7° C at a depth of 1.5 m. The air and snow surface temperatures were identical in March but the snow temperature at a depth of 1.5 m. was -15.2° C.—SIPRE. Previously listed in *Arctic Bibliography*, No. 5647.

Investigation concerns Swedish Lapps. Out of 24 children one-half to one year old, 50 per cent had distinct signs of rickets. In 42 per cent of 69 children, 1-3 years old, skeletal changes due to rickets could be proved. Lack of ultraviolet light during the first year of life, and lack of information on prophylaxis among the Lapps are held responsible for this condition. Bibliography (6 items).

**Copy seen:** DSG.

**22094. GHIGLIONE, ANGELO F.** Problems of icing on roads and airfields. Oct. 23, 1951. 10 l.

Author is Commissioner of Roads for Alaska. "Icing is defined as a mass of surface ice formed during the winter by successive freezing of sheets of water. Icing is common in the permafrost region and occurs as ground icing of the effluent seepage type or as river or stream icing. Natural icing is caused by a rainy season prior to freeze-up, prolonged freezing weather with little snow, or by a severe winter. Icing may also occur as a result of construction activities. Methods of controlling icing on roads and landing strips in Alaska involve careful selection of location for the construction, avoiding permafrost, northern exposures and wet side hills or slopes. Through-cuts, grades and curvatures are to be avoided. Bridge locations are chosen in places where the river is narrow. High level bridges are planned to clear floods and the steel bents are designed without bracing to avoid hanging ice. Roads and airfields in Alaska are maintained in winter by fencing the seepage off the road with wire netting on posts. Interception ditches are used to collect and channel surface seepage flow. River icing can

be prevented by heating the water or by the use of blasting charges."—SIPRE.

**22095. GHIGLIONE, ANGELO F.** Radio units modernize "Operation Snowball". (Pacific builder and engineer, Sept. 1952. v. 58, no. 9, p. 62-63, incl. illus.)

"Low frequency A. M. type mobile radio units are used to augment heavy duty snow removal equipment. The installation is mounted in supervisors' vehicles. Equipment used in Alaska to combat the varying snow conditions includes special-built rotary and V-blade plows, dump trucks equipped with underbody blades, and various graders with snow wings. Special cold-weather lubricants are used on all equipment. Roadside deposits of naturally dry material that can be loaded and spread are used for sanding."—SIPRE.

**22098. GIAJA, JEAN.** Influence de la fatigue musculaire sur la puissance thermogénétique et la résistance au froid. (Annales de physiologie et de physicochimie biologique, 1932. v. 8, p. 535-45, tables) **Title tr.:** The influence of fa-

tigue on the thermogenetic effectiveness and on the resistance to cold.

Contains account of experiments with rats exposed to a temperature of 0° C. Rats tired by forced marching, proved less resistant to cold and their thermogenetic capacity was much reduced. Tiring rats at different temperatures, one observes that the marching rats become cold, while resting rats maintain their normal temperature. The heat of exercise cannot in this case compensate for the heat of chemical thermoregulation, which is strongly diminished by muscular fatigue.

**22099. GIBSON, EDWIN C.** Summer arctic operations. (Military review, Oct. 1952. v. 23, no. 7, p. 50-62, incl. illus., maps)

"The Army Arctic Indoctrination School conducted summer arctic operations in the Big Delta region (Alaska). The polar mountains, highlands, and lowlands within a 50-mi. radius of Big Delta provided terrain over which supplies were moved. Glacier training conducted on the Black Rapids Glacier (150 sq. mi.) consisted of training on the basic principles of military mountaineering and specialized instruction in route selection and movement over glaciers. The experiences gained indicated resemblance of summer arctic operations to jungle operations; the importance of rivers in military transportation; the need for detailed reconnaissance and flexibility of logistics."—SIPRE.

**22100. GIDDINGS, JAMES LOUIS.** 1909- . Ancient Bering Strait and population spread. (In: Alaskan Science Conference . . . 1950. Selected papers, 1952. p. 85-102)

Contains an analysis of several broad anthropological problems, based on recent findings at Cape Denbigh (64°30' N. 162° W.) on the west Alaskan coast: early man in Alaska, migrations, the Eskimos, spread of population, etc., with conclusions: The Denbigh flint complex was probably laid down by as much as 6000 years ago; the "Eskimo physical type", found in the central and eastern Arctic, shows many differences from most of the western Eskimos; the theory of "the mechanics of population spread" permits the conclusion that Bering

Strait has never been subject to wide-scale migrations of peoples from Asia to America, but has served as a narrow conduit through which diffusion has freely vibrated in both directions at all times. *Copy seen:* DAI; DLC.

**22101. GIDDINGS, JAMES LOUIS, 1909-** . The Arctic Woodland culture of the Kobuk River. Philadelphia, University of Pennsylvania, 1952. x, 144 p. 43 text illus., 46 plates, maps. (University of Pennsylvania, Museum monographs)

*Contains a study of "Eskimo-speaking dwellers in a heavily forested area where an Athapascan material culture has proved more practical than that of the coastal Eskimo . . . [and of] a high degree of culture entity within the region through at least 700 years . . . of neither Eskimo nor Athapascan patterns but of a third, possibly older combination of cultural elements."* The study is based on archaeological excavations and observations of present-day life made by the author and others in 1940/41 and 1947 along the Kobuk River in northwest Alaska just north of the Arctic Circle, 156°-164° W. Five major sites, chronologically extending from 970 A. D. to the present, were explored, namely, Ambler Island, Intermediate Kotzebue, Old Kotzebue, Ekseavik, and Ahteut; nearly eighty house pits were excavated, several thousand artifacts, representing four major phases of culture were found; record was taken (about 200,000 words in shorthand) of ethnographic accounts and stories from the oldest people of the region, and tree-ring research was carried out which enabled precise dating of the Kobuk River sites. The technique of tree-ring dating is described in detail (p. 105-111) showing that a quite precise dating of archaeological sites is possible wherever conifers grow under extreme temperature stress in the North. The inhabitants of the Kobuk River region are Eskimos having no connections with the Indians. Detailed description and analysis is given of following aspects of their life (for each of the five localities separately): villages and houses, fishing, land-hunting, sea-hunting, travel and transportation, tools, and manufactures, skin working and tailoring, food preparation, personal adornment, communal activity, clay working. The five sites are discussed comparatively then considered compositely as representing Arctic Woodland Culture; this culture's complex of traits

is placed into its circumpolar and circum-boreal perspective, with conclusion that a pattern of culture exists within the forest edge that does not conform to wholly Eskimo or Athapascan patterns, that it is a phenomenon of the environment, a predictable combination of sea-river-forest hunting, and further research should disclose it in other areas where the environment is similar.

**22102. GIDDINGS, JAMES LOUIS, 1909-** . The Denbigh flint complex. (American antiquity, Jan. 1951. v. 16, no. 3, p. 193-203, illus.)

*Contains an account of flint artifacts isolated during the summers 1948 and 1949 at a site called Iyatayet, Cape Denbigh, north Bering Sea coast of Alaska. Following a brief note on the discovery and stratigraphy of the excavated area, a description and appraisal of the flint artifacts is given. The artifacts include: burins, knives, scrapers, various kinds of blades, points, etc. These artifacts have little in common with Eskimo culture; they represent an older culture and show distinctive Old World characteristics, thus supporting concretely the theories of a Bering Strait gateway to America in remote times. Bibliography (20 items).*

**22103. GIDDINGS, JAMES LOUIS, 1909-** . Driftwood and problems of arctic sea currents. (American Philosophical Society. Proceedings, Apr. 1952. v. 96, no. 2, p. 129-42, illus. diagrs., maps)

*Contains a discussion of driftwood and of tracing it by means of annual tree-ring records, as a contribution towards elucidating some problems of sea currents. Methods of dendochronology and tree-ring indexes are outlined, the origin of arctic driftwood indicated; and some data from dated driftwood tabulated. Samples from the area of Point Barrow appear to originate from the Yukon and Mackenzie Rivers, suggesting currents from their mouths toward this area. Data thus obtained from driftwood studies confirm those obtained earlier on currents by other methods. Suggestions are made on the possibilities of driftwood studies, especially if the methods become more refined. Bibliography (30 items).* *Copy seen:* CaMAJ

Bay, Alaska. (Tree-ring bulletin, July 1951. v. 18, no. 1, p. 2-6)

Contains a report on a tree-ring study made in July 1950 incidentally to the author's archeological reconnaissance as part of the Bering Strait Expedition. The purpose was to obtain a sample of the forest for crossdating and climatic reference to other timberline collections in the arctic area. These forests on the West Alaskan coast ( $64^{\circ}40' \text{ N. } 161^{\circ} 30' \text{ W.}$ ) "represent the westernmost coniferous trees in America, and thus are of interest as an extreme timberline reaching toward arctic cold." An analysis of the increment cores suggests that the forests examined are controlled in their growth by the stress of temperature of the growing season. They offer a good object for the study of climatic change and forest stability over several centuries.

**22105. GIDDINGS, JAMES LOUIS, 1909-** . Observations on the "Eskimo type" of kinship and social structure. (Alaska. University. Anthropological papers, 1952. v. 1, no. 1, p. 5-10)

Contains account of the kinship systems among the Nunivagamiut (Nunivak Island), Angmagssalik (East Greenland) and other Eskimo groups, based on the works of Lantis, Holm, Murdock and on the author's own observations among West Alaskan Eskimo groups on Norton Bay, especially those speaking Unalik and Malemiut dialects. There is no common pattern among all the Eskimo groups, e. g. for "cousin terminology", and an "Eskimo type" cannot be constructed (the cousin terminology of Nunivagamiut, for instance, is of Iroquois type). The author concludes that cultural unity between Eskimo-speaking groups cannot be assumed; the term "Eskimo" is primarily the name of a linguistic group and a customary division of Eskimos into eastern and western groups is hardly more satisfactory. Bibliography (8 items).

**22106. GIDDINGS, JAMES LOUIS, 1909-** . Traces of early man on the north Bering Sea coast. (Pennsylvania. University. University Museum. Bulletin, June 1950. v. 14, no. 4, p. 3-13, 5 plates)

Report on two seasons of excavations (1948-49) at Cape Denbigh, sponsored by the Arctic Institute of North America in cooperation with U. S. Office of Naval

Research: review of earlier work in Alaskan archeology, description of the sites (Nukleet and Iyatayet) excavated, remarks on remains found of houses, tools, pottery, animal bones, carvings, etc. At the lowest level, microlithic remnants, apparently the earliest traces of man yet located on the Alaskan coast, were uncovered. The relation of the latter finds at Iyatayet to similar finds in America (Folsom points and Yuma blades in southwestern U. S.) and the Old World (upper Paleolithic burins, etc.) are discussed. **Copy seen:** CaAI.

**22109. GILL, JAMES EDWARD, 1901-** , and R. L'ESPERANCE. Diabase dykes in the Canadian Shield. (Royal Society of Canada. Transactions, June 1952. Ser. 3, v. 46, sect. 4, p. 25-36, illus., sketch map)

Contains a review of published literature on the distribution, composition, age and structural relations, and manner of intrusion of the quartz, olivine and ordinary diabase dikes (and sills) which are mostly the latest group of intrusives in each area and classed as Keweenaw in age. Throughout the Canadian Shield, including northern Quebec, Ontario and Manitoba and the Northwest Territories, the dikes trend northeast, northwest and north, which probably reflects the predominance of these trends in the basic structures. Bibliography (13 items).

**22110. GILL, JAMES EDWARD, 1901-**

. Early history of the Canadian Precambrian shield. (Geological Association of Canada. Proceedings, 1952. v. 5, p. 57-68, 2 sketch maps)

*Contains* discussion of the geologic history of the Canadian Shield in Precambrian time, with conclusion that "many orogenic belts of different ages occur, not less than nine, and probably twenty or more, accompanied by as many igneous intrusive suites; that, except in the earliest stages in the building of the continent, sediments heretofore classed as Late Precambrian formed within the continental mass while Archaean-type sediments were being deposited in marginal geosynclines; that there was no 'Post-Archaean interval' and finally, that correlation of unconformities in widely-separated parts of the Shield is a misleading practice and generally incorrect." Bibliography (18 items). **Copy seen:** DGS.

**22137. GLOBUS.** Das Gebiet der Jakuten in Sibirien. (Globus, Hildburghausen, 1866. Bd. 10, p. 256) *Title tr.:* The region of Yakuts in Siberia.

*Contains* population statistics from census of 1864: 200,149 Yakuts, 10,690 Tungus, 1521 Yukaghirs, etc.; number of houses, cattle and amount of trade is given also.

*Copy seen:* DLC.

**22138. GLOBUS.** In Sibirien bei den Jakuten und Tungusen. (Globus, Hildburghausen, 1862. Bd. 1, p. 161-67, 7 illus.) *Title tr.:* In Siberia among the Yakuts and Tungus.

*Contains* notes on the reindeer or nomadic Tungus, their tents, mode of life, and beliefs (shamans, divination); the climate of the land of the Yakuts, their religion, physical and psychological characteristics, animal husbandry, hunting of the wild sheep called Argali (*Ovis Ammon*).

*Copy seen:* DLC.

**22139. GLOBUS.** Ein Jahr zu Beresof in Westsibirien. (Globus, Hildburghausen, 1863. Bd. 4, p. 214-17) *Title tr.:* A year in Berezhovo in Western Siberia.

*Contains* impressions of a political deportée, a Polish woman, Felinska, in this city on the Ob' River (63°55' N. 65°05' E.), the climate, physical characteristics of Samoyeds, the ornaments of their women; more details are given on the Ostyaks: their filthy huts, heathen religious practices, bear hunting, clothing and ornaments, tattooing, marriage customs, etc.

*Copy seen:* DLC.

**22140. GLOVER, R.** Cumberland House. (Beaver, Dec. 1951. p. 4-7, illus., map)

*Historical* notes on the extension of the Hudson's Bay Co. fur-trading operations into the interior, signalized by the founding in 1774 of its first inland trading post Cumberland House on the Saskatchewan River. Includes ground plan and illustration of the post in 1812, 1875 and 1951.

**22141. GODFREY, W. EARLE.** Birds of Lake Mistassini and Lake Alabanel, Quebec. Ottawa, 1949. 43 p. illus., table, map. (Canada, National Museum, Bulletin no. 114. Biological series, no. 38)

*Contains* sections on the location of the lakes (50°30'-51°20' N., 72°45'-74°25' W.) their drainage, relief and geology, climate, etc.; habitats and general character of the local bird fauna. This is followed by a systematic list (p. 13-41) of birds observed by the author and earlier investigators in the area, with dates of observations, age, sex, nests, etc. Many arctic forms are included. Bibliography (38 items).

*Copy seen:* DSI.

**22142. GODFREY, W. EARLE.** Birds of southern Yukon Territory. (Canada, National Museum. Bulletin 123, its Annual report for 1949-50, pub. 1951, p. 88-119, illus. map)

*Contains* results of two months' fieldwork in summer 1949, in three collecting localities at Klunene Lake, Kathleen River and Carcross. The vegetation pattern of each is described and a systematic list of about 130 birds presented, with details of plumage, habit number of individuals observed with dates and location. Some important unpublished information including a few specimens collected from the area by others, is incorporated in this record.

**22144. GODSELL, PHILIP HENRY.** 1889-. Is there time to save the Eskimo? (Natural history, Feb. 1952. v. 61, no. 2, p. 56-62, illus.)

Contains an account of the present economic plight of the Eskimos, in particular those of the Mackenzie delta and Coronation Gulf regions. The apparent increase in crime and loss of initiative among them is noted. The causes of their deterioration are outlined: destruction of animal resources and merciless exploitation by traders and whalers, especially around the turn of the century; the effects of "civilization and disease; decimation of the caribou; shift to trapping arctic foxes. Suggestions for improvement by some reorganization of trade, supervision of caribou hunting, etc., are made. **Copy seen:** DLC.

**22145. GODSELL, PHILIP HENRY, 1889-** . The nearing North. (Forest and outdoors, 1943. v. 39, p. 141-42, illus.) *continued as:* The nearing north. The boom invoked by the Alaska road (*ibid.* p. 163-64, illus.) *and as:* New empire of the North (*ibid.*, p. 215-16, map, illus.)

This series of three articles deals with opportunities which the North will present after World War II. In the first article, author outlines the development which followed World War I; in the second, he indicates the importance of roads in opening new areas to development in general, and briefly sketches the benefits of the Alaska Road (started in Feb. 1942) to the country. In the third article, an outline is given of the road from Peace River to Fort Providence and Fort Norman and the winter highway from Grimshaw in northern Alberta to Hay River. These new highways, as well as the revitalized branch of the Northern Alberta Railways, running from Edmonton to Dawson Creek, will in the author's opinion, open the Mackenzie-Athabaska region and help develop its natural resources.

**22154. GOLDTHWAIT, RICHARD PARKER, 1911-**. Development of end moraines in east-central Baffin Island. (Journal of geology, Nov. 1951. v. 59, p. 567-77, illus. incl. sketch map, 3 plates)

*Results of observations made during the Arctic Institute of North America's Baffin Island Expedition, 1950. "Five steps in the accumulation and deposition of end moraines are postulated from observations of profiles and ablation features around the south end of Barnes Icecap. This end of the icecap is generally more expanded than it was throughout the past century, but a retreat, producing end moraines, has begun on the southern and southwestern sides. Dirt is raised to the surface on shear planes along a narrow fringe of black ice around the edge of the icecap. This is till, exposed in small amounts by 5-7 ft. of ablation each summer. This film of debris slips and slides down the 10°-30° marginal slope and gathers over the lower ice slope. Where the ice becomes blanketed by 3 ft. of ablation moraine, and dirt-filmed ice above melts back rapidly, a trough develops parallel to the margin, isolating a steep-sided moraine on an ice core. After many years this material is let down irregularly to solid ground by flow of the till cover, cuts by transecting streams, and lateral undermining of the exposed core ice." (Author's abstract). Bibliography (6 items).*

**22175. GORODKOV, BORIS NIKOLAEVICH, 1890-** . Moroznaya treshchinovatost' gruntov na severe. (Vsesoyuznoe geograficheskoe obshchestvo. Izvestiya, 1950. t. 82, no. 5, p. 487-500) **Title tr.:** Cracking of the ground in the North, due to frost.

"Polygonal structures in arctic and sub-arctic soils are caused by alternate freezing and thawing. The surface configurations consist of cracks in clay, rings of angular stones around clay and gravel, stone rings in heterogeneous material, and closely packed, even-sized hollows in gravel. Permafrost does not greatly influence the formation of structural soils, but such soils were found in temperate and tropical climates along high mountain slopes. A genetic classification of polygonal nets in the Arctic is presented."—SIPRE. Bibliography (51 items). **Copied seen:** DLC.

**22197. GREENAWAY, KEITH ROGERS, 1916-** Arctic air navigation. [Ottawa] Defense Research Board [1951] 138 p., illus. *For official use.*

A monograph "intended to act as a guide and reference manual for navi-

gators and pilots . . . and to supplement, not replace basic navigation textbooks." *Contents:* introduction; maps and map projections; direction; the magnetic compass in the Arctic; asco-gyro system; dead reckoning; fixing aids; twilight; flight planning; cruise control.

*Copy seen:* CaMAI.

**22198. GREENAWAY, KEITH ROGERS, 1916-** Experiences with arctic flying weather. [Toronto] 1950. 2 p. l. 12 numb. l. (Royal Meteorological Society, Canadian Branch. Papers. v. 1, no. 9) mimeographed.

The author (in Arctic research section of the Defence Research Board of Canada) presents practical navigational information, in the course of discussing general characteristics of arctic weather throughout the year, wind velocities, fog, clouds, blowing snow, temperature, turbulence, visibility, forecasting for flights relative to the type of aircraft and operation. Finally he comments on available navigational aids, and difficulties experienced in forecasting flying weather.

**22199. GREENAWAY, KEITH ROGERS, 1916-** The R. C. A. F. high latitude twilight computer. (Arctic circular, Jan. 1952. v. 5, no. 1, p. 2-5)

Following an outline of the problem of twilight in general and at high latitudes in particular and difficulties of air navigation in polar regions due in part to twilight, the author describes the computer developed in 1948, used to flight plan the first Royal Canadian Air Force flight to the North Pole in May 1949, and on high latitude flights subsequently. Instruction is offered in its use. The apparatus is claimed to compound "the speed and flight direction of the aircraft with the earth's rotation. The aircraft's track in space is presented in graphical form and is shown in relation to the twilight belt."

**GREENAWAY, KEITH ROGERS, 1916-**, *see also* Koenig, L. S., & others. Arctic ice islands. 1952. No. 23348.

**22200. GREENE, RAYMOND.** Cold in the treatment of damage due to cold. (Lancet, Dec. 12, 1942. v. 243, p. 695-97, illus.)

*Contains* descriptions and pathology of (1) true frostbite, (2) chilling, (3) "state of physiological reaction" to cold. Principles of treatment are discussed and the

recommended cooling unit described. The author claims that in true frostbite "most of the affected tissue is doomed and no treatment can save it," whilst in chilling, "ancient tradition and modern experiment combine to suggest that while the patient himself is kept warm, the affected tissue should be cooled." Abstract by F. H. K. Green in *Bulletin of war medicine*, Oct. 1943. v. 4, no. 2, p. 74.

**Copy seen:** DLC.

**22201. GREENE, RAYMOND.** Frostbite and kindred ills. (*Lancet*, Dec. 6, 1941. v. 241, p. 689-93)

*Contains the text of a lecture delivered at the British Postgraduate Medical School, London, Feb. 6, 1941, discussing frostbite in military campaigns; true frostbite, trench-foot, shelter-foot, and immersion foot, their symptoms and pathology. Causes of cold injuries are individually considered: cold, warmth after cold, damp, wind, circulatory stagnation, anoxia, nutritional deficiency and trauma; their prevention and therapy are outlined. Bibliography (about 30 items). Abstract by C. Wilcocks in *Bulletin of war medicine*, Mar. 1942. v. 2, no. 4, p. 309. **Copy seen:** DLC.*

**22202. GREENE, RAYMOND.** Frostbite and trench foot. (*Lancet*, Feb. 17, 1940. v. 238, pt. 1, p. 303-305)

*Contains an account of the common characteristics of frostbite and trench foot; their etiology, pathology, prophylaxis and treatment. Bibliography (19 items). **Copy seen:** DLC.*

**22203. GREENFIELD, A. D. M., and others.** Circulatory response to cold in fingers infiltrated with anesthetic solution. (*Journal of applied physiology*, 1952. v. 4, no. 10, p. 785-88) *Other authors:* J. T. Shepherd, and R. F. Whelan.

*Contains a report of experiments made on three normal men; cold vasoconstriction, cold dilatation and the Lewis effect could be observed in the infiltrated region. The reaction of the infiltrated finger was more affected than the control by the temperature to which it was exposed before cooling, a condition similar to that of a chronically denervated finger. Bibliography (6 items).*

**Copy seen:** DLC.

**22204. GREENFIELD, A. D. M., and others.** Heat loss from toes and forefeet during immersion in cold water.

(*Journal of applied physiology*, July 1951. v. 4, p. 37-45, diags.) *Other authors:* G. A. Kernohan, R. J. Marshall, J. T. Shepherd and R. F. Whelan.

*When toes of a warm subject are placed in water at 0°-6° C. there is almost complete arrest of circulation followed by a vasodilatation and by alternating periods of vasoconstriction and vasodilatation. At height of cold vasodilatation, heat loss of toes is less than of fingertips. If subject is heated, the heat loss is about doubled, and, if cooled, it is reduced. The blood flow during cold vasodilatation in a heated subject is probably as great as in uncooled toes, in a comfortable subject, however, the blood flow is only about one half as great as in the heated subject.—From authors' summary. Bibliography (9 items).*

Physicians of Philadelphia. Transactions, 1930. v. 52, p. 73-95)

Following an outline of the author's work and experience among the fishermen of the North Sea, Newfoundland and Labrador, an outline is given of their hygienic, social and economic conditions, a general summary of the diseases encountered. *Leprosy*: not a single case has been seen in 40 years. *Tuberculosis*: of all the tissues, is "still very common", and takes "far the largest toll of our people". Insufficient diet, lack of light and air in the cabins and holds of the fishing vessels, and in the huts ashore, are contributing factors. *Syphilis* and *gonorrhea*: rare among the Newfoundland fishermen, the residents of the Labrador coast and the Eskimos, they developed into a devastating epidemic when a shipload of Eskimos returned from the World's Fair at Chicago (1892). American fishermen were another source of infection. *Malaria*: not a single case of it, or yellow fever, was observed. *Dysentery*: rare despite "utter lack of sanitation". *Tapeworm*: various intestinal parasites prevail, oxyurids and ascarids being very common. *Typhoid*: several outbreaks were recorded. *Smallpox*: has always been of a very mild type and has never been a cause of death. *Diphtheria*: has once or twice been very fatal. An account of these fatal outbreaks is given. *Influenza*: the epidemic that struck nearly the whole world soon after World War I proved the most fatal in Labrador. In one community of 365 Eskimos, 300 died, including all males. Neuroses, psychoses, tumors, etc., are touched briefly.

**22217. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Cephalopods from the west coast of Norway. (Bergen,

Norway. Museum. Aarbok; naturvidenskabelig rekke, 1933. no. 4, p. 1-25, illus., plates 1-4)

*Contains* critical notes on 14 marine molluscs of the class Cephalopoda from the western coast of Norway, with dimensions, illustrations and list of stations; includes at least four species distributed along the whole Norwegian coast or in northern part of Norwegian waters.

*Copy seen:* MH-Z.

**22218. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Decapoda Crustacea from the west coast of Norway and North Atlantic. (Bergen, Norway. Museum, Aarbok; naturvidenskabelig rekke, 1926, pub. 1927, nr. 7, p. 1-53, illus.)

*Contains* description of 84 species of rare decapod crustaceans taken in recent years on the west coast of Norway. The many decapods collected by the Michael Sars from 1900 to 1914 along the Norwegian coast and in the North Atlantic are included (but not the larvae), "no proper list of all the decapods" having been published before. Stations are listed chronologically for every species. At least 25 of the species are native to northern waters. Bibliography (58 items).

*Copy seen:* DLC; MH-Z.

**22219. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Echinodermer fra den norske kyst. (Bergen, Norway. Museum. Aarbok; naturvidenskabelig rekke, 1930, pub. 1931, nr. 10, p. 1-13) *Title tr.:* Echinoderms from Norwegian coast.

*Contains* a list of eight species of echinoderms, collected in 1922-29, by the Dept. of Fishery survey ship Johan Hjort, with a list of echinoderms arranged by stations up to Varanger Fiord (70° N. 33°17' E.) and descriptive notes, dimensions and data on habitat and distribution of collected species.

*Copy seen:* MH-Z.

**22220. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Grönlands ophiurider. (Bergen, Norway. Museum, Aarbok, 1892, pub. 1893, no. 3, p. 1-12, plate) *Title tr.:* Ophiuroidea of Greenland.

*Contains* a critical revision of Ophiuroidea of Greenland based on the study of collections in the University Museum at Dundee, Scotland; ten species, collected in various stations in Baffin Bay and Davis Strait are studied with special attention given to *Ophioglypha nodosa*.

*Copy seen:* MH-Z.

**22221. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** *Lagopus urogallus-albus*, ein neuer Moorschneehuhn-Bastard. (Bergen, Norway. Museum. Aarbok, 1889, no. 5, p. 1-13, illus., plate 5) **Title tr.:** *Lagopus urogallus-albus*, a new bastard ptarmigan.

Contains a description of a cross (new to the fauna of Norway) between a ptarmigan *Lagopus albus* and the common capercaillie *Tetrao urogallus*, found in Nordland, also a comparison with other known hybrids.

**Copy seen:** MH-Z.

**22222. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Malacological notes. (Bergen, Norway. Museum. Aarbok; naturvidenskabelig rekke, 1933, no. 3, p. 1-8)

Contains a list of three marine molluscs of the suborder Pteropoda, *Clione limacina*, *Limacina helicina* and *L. retroversa*, with a list of stations where they were collected in Svalbard waters; the third species is very rare in arctic seas and belongs to more southerly boreal regions.

**Copy seen:** MH-Z.

**22223. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Nogen asteriders alder og aarklasser. (Bergen, Norway. Museum. Aarbok; naturvidenskabelig rekke, 1916-1917, pub. 1917, nr. 1, p. 1-21, [1-2]) **Title tr.:** Age and age classification of some asteroids.

Contains a study of the age of asteroids, based on the material from Greenland, Barents and Kara Seas, with five tables of tabulated data on various species and a list of stations (2 p. at end).

**Copy seen:** MH-Z.

**22224. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Nogle bemaerkninger om *Pentagonaster granularis* Retz. (Norske videnskabers selskab. Trondhjem. Skrifter, 1905, no. 6, p. 1-14) **Title tr.:** Some notes on *Pentagonaster granularis*, Retz.

Contains critical notes on this echinoderm found along the western coast of Norway from Kristianiafiord to Varangerfiord, and in Greenland and Murman coastal waters; bibliography (28 items).

**Copy seen:** DLC; MH.

**22225. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Nogle cetologiske notiser. (Bergen, Norway. Museum. Aarbok, 1897, pub. 1898, no. 6, p. 1-11) **Title tr.:** Some cetological notes.

Contains descriptions of three species of cetaceans of Norwegian waters, including *Globiocephalus melas* with dimensions of a specimen of this black fish caught in 1890 in Østnaesfjord, Vaagø, Lofoten Islands.

**Copy seen:** MH-Z.

**22226. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Nudibranchiate molusker indsamlede av den Norske fiskeridamper "Michael Sars". (Norske videnskabers selskab, Trondhjem. Skrifter, 1912, pub. 1913, no. 13, p. 1-13) **Title tr.:** Nudibranchiate molluscs collected by the Norwegian fishing steamer *Michael Sars*.

Contains an enumeration of 28 marine nudibranchiate molluscs collected by the *Michael Sars* during 1900-1908, with list of stations and data on habitat for each species; includes some species native to Greenland Sea, where the ship cruised in 1900 and 1901.

**22227. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Oversigt over det nordlige Norges echinoderm. (Bergen, Norway. Museum. Aarbok, 1902, no. 1, p. 1-38, illus. plate) **Title tr.:** A revision of echinoderms of northern Norway.

Contains some historical and statistical data, a systematic list of 66 species of echinoderms collected in the sea along the coast of northern Norway, with dimensions, data on habitat and distribution, and a table of distribution in Norwegian waters, Greenland, Spitsbergen and in the seas of the U.S.S.R.

**Copy seen:** MH-Z.

**22228. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Oversigt over Norske pennatulider. (Bergen, Norway. Museum. Aarbok, 1891, pub. 1892, no. 1, p. 1-24, plate) **Title tr.:** A survey of Norwegian Pennatulidae.

Contains historical notes on the study of Norwegian sea-pens (fam. Pennatulidae), a bibliography (31 items) and a systematic list of 29 species and some varieties, with synonymy, data on geographic distribution and occasional critical notes; includes at least ten species native to northern Norwegian waters (Lofoten Islands, Finnmark).

**Copy seen:** MH-Z.

**22229. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Remarks on Verrill's North American *Alvania* (*Cingula*) *jan-*

*mayeni* (Friele). (Bergen, Norway. Museum. Aarbok; naturvidenskabelig rekke, 1919-20, pub. 1921, nr. 8, p. 1-9, illus.)

Contains a comparative study of two northern forms of a gastropod known as *Alvania* (*Cingula*) *jan-mayeni*, one from Jan Mayen waters and occurring also in Greenland, Barents, Kara and White Seas, and another from North American waters (Gulf of St. Lawrence and New England waters); the latter form is recognized by the author as a different species and the name *Alvania americana* proposed.

**Copy seen:** MH-Z.

**22230. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** To nye Cornularier fra den norske kyst. (Bergen, Norway. Museum. Aarbok, 1887, pub. 1888, nr. 2, p. 1-18, plates 1-2) **Title tr.:** Two new Cornularia from the Norway coast.

Contains Norwegian and English descriptions of two new polyps brought home by the Norwegian North Atlantic Expedition, including *Rhizoxenia alba*, n. sp. collected at the station 251 (68°06' N. 9°44' E.). Summary in English.

**Copy seen:** MH-Z.

**22231. GRIEG, JAMES ALEXANDER-SØN, 1861-1936.** Tre nordiske aleyonarier. (Bergen, Norway, Museum. Aarbok, 1890, no. 2, p. 1-13, plate 1) **Title tr.:** Three Scandinavian Aleyonaria species.

Contains a critical study of three northern species of polyps of Aleyonaria, including *Isidella hippuris* found in Lofoten Island waters and in Vestfjord (68°12' N.) during Norske Nordhavsekspedition, *Anthothela grandiflora* from the same region and *Clavularia arctica* taken by G. O. Sars near Vardø, northern Norway.

**22232. GRIFFIN, DONALD REDFIELD, 1915-** . Alaskan bird migrations. (Research reviews, July 1951. p. 11-20, illus., incl. 2 maps)

Discussion of contemporary trend in the study of bird migration, based on new methods used in Northern Alaska (and elsewhere) to study how accurate a course birds take, how much contact flying, guidance by geographic clues and atmospheric conditions help them, and the reasons why many birds migrate to the Arctic to nest. One possible reason offered is the longer day and consequent briefer nesting period. Bibliography (12 items).

**22235. GRIGOR'EV, B.** Russkie na Shpitsbergene. (Nauka i zhizn', 1952. t. 19, no. 3, p. 42-44) **Title tr.:** Russians on Spitsbergen.

Contains historical notes on numerous trips of Russian fishermen ("pomors") to Grumant (West Spitsbergen) long before it was "discovered" by Willem Barendsz in 1596, and on the Russian camps on that island in the 17th and 18th centuries. Russian scientific expeditions thither are recounted, those of Prof. Korotnev in 1898, Admiral S. O. Makarov on *Ermak* in 1901, Rusanov in 1912, the Grumant Co. in 1913-15. Soviet expeditions on the *Persei* in 1925, the *Krasin* in 1928, and the discovery of coal and minerals on West Spitsbergen are noted. The special rights of the U.S.S.R. on Svalbard and Bjørnøya are pointed out.

**22237. GRIGORE'V, S. V.** Reka Tuloma, istochnik énergosnabzheniia Kol'skogo poluostrova. (Karelo-Murmanskii kraï, 1934, no. 3-4, p. 37-41) **Title tr.:** The Tuloma River as source of energy supply for the Kola Peninsula.

Contains a technical account of the Tuloma as the largest single source of hydro-electric power in the Murman, with data on the power potential of this and of smaller rivers of Kola Peninsula; areas of reservoirs; catchment areas; precipitations, fluctuations of water level, etc.

**Copy seen:** DLC.

**22238. GRIGOROVA, O. P.** Kartina krovi v sviazi s usloviiami zhizni i avitaminozom u russkogo i nenetskogo naseleniia Novoi Zemli. (Antropologicheskii zhurnal, 1933. no. 1-2, p. 163-77, 4 illus., diag.) **Title tr.:** The blood picture as related to living conditions and to avitaminosis of the Russian and Samoyed population of Novaya Zemlya.

Contains a report of a study made in 1928 on 118 individuals (67.5 percent of

the population). An account is given of the people, their food, vital statistics, social and occupational conditions and previous studies of the problem. Environmental conditions were found to exert a stimulating effect on the hematopoietic organs augmenting their regenerative processes. Reduction of the percentage of hemoglobin, increase in number of erythrocytes and decrease of their diameter, hypochromia and polychromatophilia of the red blood cells, lymphocytosis and eosinophilia, were found in the permanent residents. The blood pictures in scurvy in age, sex and racial groups are also discussed. Bibliography (7 items).

**22239. GRIMM, OSKAR ANDREEVICH, 1845-** Fishing and hunting on Russian waters. St. Petersburg, R. Golice print., 1883. 55 p. (International fisheries exhibition, London, 1883)

Contains a survey of the water basins of European Russia and their characteristics, a list of 288 fishes of European Russia, with their geographical distribution, p. 5-18. At least 40 species native to the Arctic seas, White Sea and rivers of the northern regions are included. Commercial fishes are noted with fishery statistics, data on prices, preservation and export of fishing products. Hunting and trapping in Russian waters is summarized with notes on mammals, rodents, cetaceans and invertebrates.

On the basis of material collected in 1915 by Y. Wuorentaus in the Yenisey region, and elsewhere, 93 species of these microscopic algae are listed and a few described; arctic forms are included in the account.

**Copy seen:** DLC.

**22246. GRÖNBLOM, THORWALD.** Eine neue *Selandria*-Art aus Lappland. (Hym. Tenth.). (Notulae entomologicae, 1938, v. 18, no. 4, p. 135) **Title tr.:** A new *Selandria* species from Lapland.

**Contains** a diagnosis of *Selandria flavistigma* n. sp. found by the author near Vålåustari, Petsamo, Finnish Lapland, on July 15, 1935.

**Copy seen:** DLC; MH-Z.

**22247. GRÖNBLOM, THORWALD, and T. H. CLAYHILLS.** Einige Berichtigungen und Nachträge zu den in W. Petersen's "Lepidopteren Fauna von Estland" vorkommenden Angaben über finnische Macrolepidopteren. (Notulae entomologicae, 1924. v. 4, no. 4, p. 99-103) **Title tr.:** Some corrections and additions to the data on Macrolepidoptera of Finland in W. Petersen's *Lepidopteren Fauna von Estland*.

**Contains** a criticism of the data on Finnish distribution of large lepidoptera in Petersen's paper pt. 1 (pub. 1924, not listed in *Arctic Bibliography*). The present authors give a list of species attributed to Finland by Petersen which they exclude; and present another list of Finnish species with distributional data for Finland, Russian Lapland and Karelia, which includes at least nine species from Finnish and Russian Lapland. A tabulation of statistical data on Macrolepidoptera in Finland and Estland is appended.

**Copy seen:** MH-Z.

**22248. GRÖNDAHL, LAURI.** Lumilavit. (Terra, 1911. v. 23, p. 1-13, illus.) **Title tr.:** Snow avalanches.

Discussion of avalanches (mostly in Switzerland), but relevant to those occurring in conditions of heavy snowfall on steel slopes in the Fennoscandian mountain regions. The avalanches are typed as: wind-avalanche, bottom-avalanche, and ice-avalanche. The bottom-avalanche, usually occurring on treeless slopes, grass-covered embankments, gorges and stony ledges, at elevations of 1800-2500 m. in the Alps, is stressed by the author. The use of trees to prevent avalanche damage is described.

**22262. GRUENING, ERNEST HENRY.** 1887-. The political ecology of

Alaska. (Scientific monthly, Dec. 1951. v. 73, p. 376-86)

Contains an address delivered by the Governor of Alaska to the Second Alaskan Science Conference, Mount McKinley National Park, Sept. 1951, dealing with the history and some of the problems of economic, political, and social life in the Territory.

**Copy seen:** DGS; DLC.

**22263. GRUM-GRZHIMAĬLO, GRIGORIĬ EFIMOVICH, 1860-1936.** *Lepidoptera nova vel parum cognita regionis palaearecticae, I.* (Akademiia nauk SSSR. Zoologicheskii muzei. Ezhegodnik, 1899, pub. 1900. t. 4, no. 4, p. 455-72) **Title tr.:** New or little known palaearectic Lepidoptera, I.

Contains Latin diagnoses of new or little known butterflies and moths from various regions, including seven new species and varieties from Yakutia (Lena, Yana, Olenek river basins), and critical notes in Russian. Pt. II (1902) does not include arctic material.

**Copy seen:** DLC; MH-Z.

**22264. GRUNOW, ALBERT, 1826-1914.** *The Diatomeen von Franz Josefs-land.* (Akademie der Wissenschaften, Wien. Mathematisch - naturwissenschaftliche Classe. Denkschriften, 1884. Bd. 48, p. 53-112, 5 plates) **Title tr.:** Diatoms from Franz Josef Land.

Based on a study of bottom sediment samples collected at 100-500 meters depth by the Austro-Hungarian Arctic Expedition, 1872-74, near Franz Josef Land. This collection includes (1) marine species known from many parts of the arctic seas, some parasitic on other algae and some occurring by chance, (2) marine species previously known only from Simbirsk shales and Jutland Pleistocene deposits (altogether 70 species and many varieties), and (3) 30 fresh-water species carried to sea by glacial ice. The author studied also another collection of 39 especially interesting species taken from the underside of an ice-floe west of Matochkin Shar (in Barents Sea) in Aug. 1872, which included many forms already described from Kara Sea and waters eastward (reported by the *Vega* Expedition). **Copy seen:** DGS.

**22265. GRUZDEVA, N.** Developmental cycle of *Izodes persulcatus*, transmitter of the tick encephalitis in the Maritime Province, Far East of the USSR. (Akademiia nauk SSSR. Comptes rendus

**22288. GURINA, N. N.** Kamennye labirinty Belomor'ia. (Sovetskaiia arkhologiya, 1948. t. 10, p. 125-42, 9 illus.) **Title tr.:** The stone labyrinths of the White Sea.

*Contains* description of stone rings in the form of labyrinths (round or oval) at Kandalaksha, on the Solovetskiye Islands, in Finland, and other localities near the White and Barents Seas. These rings (illustrated here with photograph and sketched plans) are several thousand years old and had evidently some magic purpose: to assure good luck in fishing.

**Copy seen:** DLC.

**22289. GURINA, N. N.** Nekotorye dannye o zaselenii ūzhnogo poberezh'ia Kol'skogo poluostrova. (Sovetskaiia arkhologiya, 1950. t. 2, p. 105-127, illus., sketch map) **Title tr.:** Some data on the peopling of the southern shores of the Kola Peninsula.

*Contains* description of work of the archeological expedition, directed by the author in 1946 when excavations were made at several sites (indicated on sketch map) near Kandalaksha, and along the Umba and Varzuga Rivers. Several former settlements and two stone rings (labyrinths) were discovered, and

numerous archeological objects excavated: scrapers of quartz, fragments of ceramic, stone axes and hammers are described and illustrated. **Copy seen:** DLC.

**22290. GURINA, N. N.** Neoliticheskie poseleniia severnogo poberezh'ia Kol'skogo poluostrova. (Akademii nauk SSSR. Institut istorii material'noi kul'tury. Materialy i issledovaniia po arkheologii SSSR, 1951. no. 20, p. 143-67, illus., sketch map) **Title tr.:** The neolithic population of the northern coast of Kola Peninsula.

*Contains* analysis of the archeological objects and other data brought to light since 1925, particularly results from the archeological expeditions sent to the Rybachiy Peninsula and other localities on the northern coast in 1935 and 1937, to search for monuments of the "arctic paleolithic." Some 29 settlements, sites and labyrinths were then unearthed and 35 objects of stone, bone and ceramics (tables on p. 150-51) collected. These objects are characterized according to material and function. Old Lappish earth-dwellings were also discovered. The author discusses the problem of the "arctic paleolithic" and neolithic, also refers to his own discoveries made in 1946 at Kandalaksha and Umba, as reported in his *Nekotorye dannye o zaselenii ūzhnogo poberezh'ia Kol'skogo poluostrova*, 1950, q. v.

**Copy seen:** DLC.

**22291. GURVICH, I. S.** Ėtnograficheskaiia ėkspeditsiia v nizhne-kolymskii i sredne-kolymskii raiony űakutskoi ASSR v 1951 godu. (Sovetskaiia ėtnografiia, 1952, no. 3, p. 200-209, 4 illus., map) **Title tr.:** The ethnographical expedition to the lower and middle Kolyma regions of the Yakut ASSR in 1951.

*Contains* preliminary report on a project organized by the Yakut branch of the Soviet Academy of Sciences, to study the present ethnic composition, life and culture of the inhabitants native to those regions. The author with interpreter-assistant visited during Apr.-Oct. 1951, all but one of the inhabited places traveling 3,970 km. by dog- or reindeer-sledge, horses and boats. Material was collected for an ethnographic map covering the Kolyma, Chukoch'ya and Alazeya River basins. An important group of Chukchis was studied, living (since 1850-52) on the lower Kolyma preserving their own language and indigenous culture. These reindeer-breeding Chuk-

this are now collectivized, and the working people organized into brigades of herds-men, hunters, fishers, woodsmen, etc. Their native clothing has been preserved, but some customs, e. g., the voluntary death and service for a wife have disappeared after collectivization; polygamy has been abolished and the exchange of wives begins to be regarded as a violation of the general norm; the last great slaughter of reindeer for a feast took place in 1930. Another native group, Yukaghirs (those living in the tundra self-named Odul), has adopted the Tungus' mode of living, clothing, etc., though preserving their own language, which has even been adopted by some Tungus. The Tungus (called Khangaev, Khodod'in, Lamut, Eveni) were formerly wild-reindeer hunters. Since collectivization in 1933-34, they and the Yukaghirs are organized for reindeer husbandry like the Chukchis. Tungus women's clothing has been adopted by Chukchis and Yukaghirs, and the Tungus men wear clothes of the Chukchi type. Similar mixture and borrowing is apparent also of sledge and harness types. Some old Russian settlers (storozhily) were found and some russification of the natives. The kolkhoz "Turvaugin" for example is comprised of 123 Chukchis, 75 Yakuts, 36 Russians, 32 Tungus, and 28 Yukaghirs, almost everyone speaking two languages at least. The inhabitants on the Middle-Kolyma are Yakuts (with many Russian words adopted) and Tungus (with language and clothing preserved). They are reindeer- and dog-breeders, fishers and hunters, and are organized into collective farms (kol-khozes). Continuation of this study under the same auspices is planned for the summer of 1952 in the Indigirka basin.

**Contains** discussion of boundary problems: the frontier in Lapland and (mainly) the status of river islands in the Tornio and Muonio on the Swedish-Finnish border and in the Teno and Inari on the Norwegian-Finnish frontier. Summary in German.

**Copy seen:** DLC.

**22311. HAAVIO, MARTTI, 1899-** Das Renttierlied des Miikkali Shemeikka. (Suomalais-ugrilainen seura. Aikakauskirja, 1947. v. 53, no. 3, p. 1-50) **Title tr.:** The reindeer song of Michael Shemeikka.

Contains folkloristic investigation of a hunter's magic song, first recorded in 1893, which has been used throughout several generations by famous hunters and singers of the Shemeikka family, settled on Lake Rudavus in Finland. The song is a charm to draw the wild reindeer from their homeland, "Fiery Lapland", whither the Finns went to learn magic from the Lapps. Includes description of a divination from fire performed by a Lapp. **Copy seen:** InU.

**22312. HAAVIO, MARTTI, 1899-** . Ueber die finnisch-karelischen Klageliedern. (Suomalais-ugrilainen seura. Aikakauskirja, 1934. v. 47, no. 3, p. 1-39. **Title tr.:** On the Finnish-Karelian lamentations.

Contains folkloristic investigation of the laments used at the funeral of a deceased relative and also those of a bride at her wedding. The material is taken from the printed sources and deals chiefly with texts and customs found among the orthodox Karelians in the government of Arkhangel'sk. The custom of wailing on such occasions is very old among the Finns; the texts of laments, however, show considerable Russian influence.

**22341. HÄYRÉN, A. E.** Granbestånden i Finland. Helsingfors, 1899. 34 p. fold. map. (Geografiska föreningen i Finland. Meddelanden, v. 4, no. 7)

**Title tr.:** The spruce stands in Finland.

Contains a brief review of earlier studies, and two main sections dealing with spruce forests and spruce swamps. The genesis, growth and character of the ground vegetation of these forests are analyzed. On the basis of this vegetation, the author divides the forests into those of Finland and Lapland. The characteristic ground plants and epiphytes are listed. In the second section the genesis, growth and characteristics of spruce swamps are similarly discussed. On the basis of criteria used with the trees, the swamps too are classified as those of Finland and Lapland. Summary in German.

Enumeration with notes, of (1) twenty species of parasitic micromycetes, of which 13 are new to the flora of Jan Mayen; with notes on wandering of species (transported by floating ice, wind, etc.); (2) 13 species from West Spitsbergen, with mention of two unidentifiable, badly preserved specimens. Bib-

liography (p. 11, 23 items; p. 24-25, 32 items). **Copy seen:** DGS.

**22348. HAGEN, ASBJØRN.** Uredinae from East Greenland. (Uredineana, 1946. t. 2, p. 62-68)

List, with references, host plants and localities, of 20 species of rusts from the author's collections made in Eirik Raudes Land, 1933 (71°30'-75°40' N.) and from southeastern Greenland collections of the Oslo University Botanical Museum. Bibliography (12 items). **Copy seen:** DA.

**22349. HAGEN, ASBJØRN.** Ustilagineae from East Greenland. (Sydowia; annales mycologici, 1947. Ser. 2, v. 1, p. 283-88)

List, with localities and host plants of 13 species of smuts from collections made by the author in Eirik Raudes Land (71°30' N.-75°40' N.) 1933, or from southeastern Greenland collections of the University of Oslo Botanical Museum. Bibliography (7 items).

**Copy seen:** DA.

**22350. HAGEN, HERMANN AUGUST, 1817-1893.** Beitrag zur Odonaten-Fauna des Russischen Reiches. (Stettiner entomologische Zeitung, 1858. Bd. 19, no. 1-3, p. 96-101) **Title tr.:** A contribution to Odonata fauna of the Russian Empire.

Contains a list of nine dragonflies collected by R. Maak in the valley of Vilyuy River ("Flusse Wilni") northeastern Siberia, and another list of 21 species from various regions of Russia, supplementary to the author's *Odonaten-Fauna d. Russischen Reichs*, 1856, q. v.

**Copy seen:** MH-Z.

**22351. HAGEN, HERMANN AUGUST, 1817-1893.** Hemerobidarum synopsis synonymica. (Stettiner entomologische Zeitung, 1866. Bd. 27, nr. 10-12, p. 369-462) **Title tr.:** Synopsis of Hemerobidae with synonymy.

Contains a synopsis of 56 genera of lace-winged flies of the fam. Hemerobiidae (p. 371-78) and a synopsis of the then known (751) species (p. 378-462) from various regions of the world, with literature citations, synonyms and place of origin. Includes several species from northern regions of Europe, Asia and North America. **Copy seen:** MH-Z.

**22352. HAGEN, HERMANN AUGUST, 1817-1893.** Die Odonaten-Fauna des Russischen Reiches. (Stettiner entomolo-

gische Zeitung, 1856. Bd. 17, no. 11-12, p. 363-81) **Title tr.:** Odonata fauna of the Russian Empire.

Contains historical notes on the study of dragonflies of Russia, description of material, including one species from Arkhangel'sk province, eight from Kamchatka Peninsula and some species from Ayan on the coast of the Okhotsk Sea and from "Russian America" (Alaska and Sitka, i. e. Baranof Island), with discussion of the elements and subdivisions of the fauna. A summary of this paper was published as *Odonates de la Russie*, 1856, q. v. and a supplementary paper as *Beitrag z. Odonaten-Fauna*, 1858, q. v. **Copy seen:** MH-Z.

**22353. HAGEN, HERMANN AUGUST, 1817-1893.** Odonates de la Russie. (Études entomologiques, 1856. t. 5, p. 52-59) **Title tr.:** Odonata of Russia.

Contains historical notes on the study of dragonflies and their distribution in Russia, a general sketch of Odonata fauna based partly on collections of V. Mochulskii and Ménétris, including eight species native to Kamchatka Peninsula and three from Alaska. **Copy seen:** MH-Z.

**22354. HAGEN, HERMANN AUGUST, 1817-1893.** Russlands Neuropteren. (Stettiner entomologische Zeitung, 1858. Bd. 19, no. 1-3, p. 110-22) **Title tr.:** Neuroptera of Russia.

Contains historical notes on the study of neuropterans in Russia and a systematic list of 89 species (30 are new to the science, but mostly undescribed and even not named). A few species are from northern Russia and Siberia; additional data on distribution in Europe, especially in Scandinavia, are supplied by the author. **Copy seen:** MH-Z.

**22355. HAGEN, INGEBRIGT SEVERIN, 1852-1917.** Forarbejder til en norsk løvmossflora. I. Orthotrichaceae. (Norske videnskabers selskab, Trondhjem. Skrifter, 1907, pub. 1908, no. 13, p. 1-100, illus.) **Title tr.:** Materials for the leafy moss flora of Norway, I. Orthotrichaceae.

Contains keys to the genera and species of the leafy moss family Orthotrichaceae and a critical revision of 37 species and some varieties and forms, with lists of localities arranged by counties; includes some species native to Nordland, Tromsø and Finnmark. This work was continued in 1909-1915 under the same title (pta.

II-XX); pt. XXI (see Hagen and Printz) was published posthumously in 1929.

**Copy seen:** DLC; MH-Z.

**22356. HAGEN, INGEBRIGT SEVERIN, 1852-1917.** Forarbejder til en norsk løvmosflora, II, Meeseaceae; III, Geogiaceae; IV, Disceliaceae; V, Neckeraaceae; VI, Pseudoleskeaceae; VII, Thuidiaceae; VIII, Leskeaceae. *Contains* keys to the genera and species of seven families of leafy mosses and description of 44 species and some varieties, with critical notes and lists of Norwegian localities for each form. Some of the forms occur in the North. The preface, critical notes and some general descriptions are given in French.

**Copy seen:** DLC; MH-Z.

**22357. HAGEN, INGEBRIGT SEVERIN, 1852-1917.** Forarbejder til en norsk løvmosflora, IX, Grimmiaceae; X, Timmiaceae; XI, Schistostegaceae; XII, Hedwigiaceae. (Norske videnskabers selskab, Trondhjem. Skrifter, 1909, no. 2, p. 1-114, illus.) **Title tr.:** Materials for the leafy moss flora of Norway, IX-XII.

*Contains* keys to the families and species of four families of leafy mosses and descriptions of 50 species and some varieties, with critical notes and lists of Norwegian localities, including those in Nordland, Tromsø and Finnmark; partially in French.

**Copy seen:** DLC; MH-Z.

**22358. HAGEN, INGEBRIGT SEVERIN, 1852-1917.** Forarbejder til en norsk løvmosflora, XIII, Splachnaceae; XIV, Oedipodiaceae; XV, Leucodontaceae; XVI, Ceratodontaceae; XVII, Encalyptaceae; XVIII, Seligeraceae. (Norske videnskabers selskab, Trondhjem. Skrifter, 1910, no. 1, p. 1-108, illus.) **Title tr.:** Materials for the leafy moss flora of Norway, XIII-XVIII.

*Contains* keys to the genera and species of moss families listed above, and an enumeration of 51 species (in six families) with synonymy, Latin descriptions of five new varieties, descriptive and critical notes and data on distribution in Norway. Partially in French.

**Copy seen:** DLC; MH.

**22359. HAGEN, INGEBRIGT SEVERIN, 1852-1917.** Forarbejder til en

norsk løvmosflora, XIX. Polytrichaceae. (Norske videnskabers selskab, Trondhjem. Skrifter, 1913, pub. 1914, no. 1, p. 1-77, illus.) **Title tr.:** Materials for the leafy moss flora of Norway, XIX. Polytrichaceae.

*Contains* keys to the genera and species of moss family Polytrichaceae, and a critical revision of 22 species and some varieties (three varieties described as new), with extensive data on total distribution. Partially in French.

**Copy seen:** DLC; MH.

**22360. HAGEN, INGEBRIGT SEVERIN, 1852-1917.** Forarbejder til en norsk løvmosflora, XX. Dicranaceae. (Norske videnskabers selskab, Trondhjem. Skrifter, 1914, pub. 1915, no. 1, p. 1-192) **Title tr.:** Materials for the leafy moss flora of Norway, XX. Dicranaceae.

*Contains* keys to the subfamilies, genera and species of the moss family Dicranaceae, and an enumeration of 70 Norwegian species and some varieties, including descriptions of four new genera and eight new species, synonymy, critical notes and data on distribution in Norway, index to the species; includes many species native to northern Norway. Partially in French.

**Copy seen:** DLC; MH.

**22361. HAGEN, INGEBRIGT SEVERIN, 1852-1917, and H. PRINTZ.** Forarbejder til en norsk løvmosflora, XXI. Pottiaceae. (Norske videnskabers selskab, Trondhjem. Skrifter, 1928, pub. 1929, nr. 3, p. 1-96) **Title tr.:** Materials for the leafy moss flora of Norway, XXI. Pottiaceae.

*Contains* keys to the genera of the moss family Pottiaceae and an enumeration of 62 Norwegian species, including many native to northern Norway; this final part of Hagen's work was compiled, corrected and edited by H. Printz from the manuscript found among I. Hagen's papers after his death. Partially in French.

**Copy seen:** DLC; MH.

**22368. HAGMAN, NILS, and T. J. KUKKÄMAKI.** The variations in the catch of salmon and the water levels of the rivers. With a mathematical treatment of the question by T. J. Kukkamäki. Helsinki, 1938. 45 p., tables, diagrs., figs. (Suomalainen eläin-ja kasvitieteellinen seura Vanamo. Eläintieteellisiä julkaisuja. Annales zoologici, 5:6)

**Author** discusses the factors believed to be responsible for the fluctuation in salmon catches in Scandinavia, Finland and generally. An account of the changes in the water levels in Finnish, Swedish and Norwegian rivers follows, together with an analysis of re-ascending salmon, year-classes, catches, etc. A mathematical treatment by the co-author concludes the study, the results of which indicate that the variations of catches depend upon the water levels of the rivers.

Lumi- ja jäätien käytön välistä  
suhteista. (Metsä - taloudellinen aika-  
kauslehti (Finska forstföreningen), 1950.  
v. 65, no. 12, p. 399-400) **Title tr.:**  
The comparative value of snow and ice  
roads.

Author discusses data gathered by  
work of Metsäteho (Forestry Research  
Association) during two years on 24 snow  
roads and 39 ice roads in Finland; and  
compares advantages of the two road  
types from viewpoint of cost and effi-  
ciency, for horse-drawn haulage of logs.

Maan roudantumisesta tilapäistalvianto-  
iden rakentamisen kannalta. (Metsä-  
taloudellinen aikakauslehti (Finska  
forstföreningen), 1948. v. 63, no. 5, p.  
159-65) **Title tr.:** On the freezing of the  
soil with regard to building temporary  
winter auto roads.

Describes work by Keranen and Kok-  
konen in Finland (including northern  
areas) on the changes in temperature of  
the upper soil layers, depths of the frozen  
soil and the physical properties of frozen  
soil; also work of the Swedish scientist  
Beskow on frost phenomena and their  
effect on roads and railroads. Discussion  
of factors affecting the freezing of soil  
and depth of the frost on the basis of work  
by Kaitera and Simola, and data from  
Finnish agricultural engineers, building  
contractors and agricultural societies,

also work of Mitscherlich in Germany.  
Includes data from observations of  
Metsäteho research in Finland during the  
winter of 1947-48, notably the effects of  
freezing on temporary logging roads,  
relationship of temperature, groundwater,  
snowcover, etc., to frost action and frost  
depth on roads. Daily records were kept  
of the soil temperature at various depths  
also of frost depth. Remarks on effect of  
thinning and compaction of the snow-  
cover; results of laboratory work.

ties and opportunities for research at the  
Arctic Health Research Center. (U. S.  
Public Health Service. Public health  
reports, 1951. v. 66, no. 29, p. 941-44)

Contains a general description of the  
Center, at Anchorage, and more detailed  
accounts of the staff, facilities, equipment  
and scope of work of the laboratories of  
physiology, biochemistry, animal-borne  
diseases, entomology, bacteriology, sani-  
tation; also of the library, instrument  
shop and animal house. The help of  
field observers, and facilities available in  
other institutions, including a hospital,  
are noted.

lems of Alaskan Eskimos, Indians, Aleuts.  
(U. S. Public Health Service. Public  
health reports, 1951. v. 66, no. 29.  
p. 912-17)

Contains a brief review of the major  
health problems of Alaska: tuberculosis  
and its very high incidence, severity of  
epidemics, gastroenteric diseases, syphilis,  
alcoholism, crime, nutritional status, etc.  
Author stresses that most basic issues,  
like effect of climate, race, local diet, etc.,  
on disease, have not been studied and  
hence, area offers a good opportunity for  
basic research.

p. (Juneau Ice Field Research Project.  
Report no. 3) Mimeographed. Other

authors: M. G. Marcus, F. A. Small and M. M. Miller.

Contains a report based on summer operations of 1948 (20 days), 1949 (100 days), 1950 (110 days), and winter operations of 1951 (32 days), with 6 to 31 men participating. Data are presented on food requirements, storage, packaging, transportation (by aircraft, with parachute and free-drop); detailed breakdown is given of kinds and amounts of food and condiments; suppliers, etc. Dietetic considerations and recommendations are made regarding foods used.

Contains reports of the 1949 and 1950 field seasons and the 1951 winter party, prepared for use by future expeditions operating in a similar environment. The reports present information on medical supplies and equipment; health of personnel including physical fitness tests; treatment of frostbite and burns, etc.; medical logs; recommendations for the future regarding equipment, medicines, sanitation and food use; appendices provide detailed lists of medicines and medical equipment received and stored, blood types of the personnel, etc.

Geologiska undersökning. Afhandlingar och uppsatser. Ser. Ca, no. 5, pt. 3) **Title tr.:** The glaciers of the Sarek Mts. and their investigation; a short survey.

The Sarek Mts. (approximately 67°20' N. 18° E.) north of the Sulitelma range) cover an area of about 2000 km<sup>2</sup> in Swedish Lapland and comprise about 100 glaciers. The annual accumulation of snow on the Mikka Glacier was measured over a six-year period (1904-1909) by means of a new accumulation meter (fig. 9-10). Methods of measuring ablation and rate of flow are discussed. The Sarek Glaciers advanced from 5 to 6 m. during 1897-1909.

**22402. HANSON, HAROLD CARSTEN,** 1917- , and ROBERT H. SMITH. Canada geese of the Mississippi flyway, with special reference to an Illinois flock. (Illinois Natural History Survey. Bulletin, Mar. 1950. v. 25, p. 67-210, illus., diags. maps)

Study of *Branta canadensis interior* which breed inland from the west coast of James Bay and the south coast of Hudson Bay and which winter in the Mississippi valley, particularly in Horseshoe Lake Game Refuge and environs in the southern tip of Illinois. The study is based on work in this area, on records of the Jack Miner Sanctuary at Kingsville, Ontario, and on reconnaissance in the breeding grounds themselves between Severn and Albany Rivers in the James-Hudson Bay region of northern Ontario. Following an outline of the materials and methods of the investigation, authors discuss the flyway concept: the 4 major lanes of migratory bird travel in North America; eastern populations of the Canada goose; its Hudson-James Bay breeding

range (with data on muskeg types); migrations; winter concentrations in various sanctuaries, etc., noting effect of the Horseshoe Lake Wildlife Refuge in attracting a large proportion (up to 50 per cent) of Canada geese wintering along the Mississippi. Description and data are presented on goose behavior and hunting losses; history of hunting in Illinois; annual bag in the Hudson-James Bay area and elsewhere; differential hunting losses; losses by crippling and other mortality factors; productivity; population survival; protection of the species, etc. *Appendices* offer (1) ecological data on the southeast population and (2) classification of the Canada geese of the genus *Branta*. Bibliography (about 120 items).

**22403. HANSON, HAROLD CARSTEN, 1917-** . A morphometrical study of the Canada goose, *Branta canadensis interior* Todd. (Auk, Apr. 1951. v. 68, p. 164-173, tables)

Report on a study of 414 geese trapped in the autumn of 1943 and believed to be a random sample of the Horseshoe Lake (Ill.) flock. The breeding grounds of this flock lie in the muskeg country of northern Ontario, between the Albany and Severn Rivers. Sex and age of the examined specimens were determined. Length distributions are recorded for the wing, tail and exposed culmen as well as differences associated with sex and age. Variability-taxonomy relations, and comparisons with other samples and races, are discussed. Bibliography (11 items).

**22406. HANSON, HERBERT CHRISTIAN, 1891-** . Characteristics of some grassland, marsh, and other plant communities in western Alaska. (Ecological monographs, Oct. 1951. v. 21, no. 4, p. 317-78, illus., tables)

*Contains* results of ecological and phytogeographic investigations carried out during 1949-50, supported by Arctic Institute of North America with funds provided by U. S. Office of Naval Research. The report covers a large number of plant communities of western Alaska, from Kodiak Island in the southwest to Kotzebue in the northwest and Big Delta in the northeast. These communities include coastal strand and salt-marsh vegetation, several kinds of grassland, upland marshes and bogs, forest and shrub; dwarf shrub-lichens, *Dryas* and *Luetkea* communities. Some of the communities are complexes or mosaics of micro-communities. The vegetation in representative stands is analyzed according to species, cover, frequency, succession, etc. The soil profiles in most of the stands are described. The similarity of many communities with those in other regions, especially Norway, is stressed. A classified list of the communities investigated is given in the table of contents, and in the appendix (p. 376-78) is a check-list of species tabulated according to the 16 classes of communities. Bibliography (about 70 items).

*Copy seen:* DAI; DSI-M.

**22407. HANSON, HERBERT CHRISTIAN, 1891-** . Some relationships of plant communities to physical environment in Alaska. (Arctic, Sept. 1951. v. 4, no. 2, p. 138-39)

News note on studies of plant communities of western Alaska and their relationships to the substratum, carried out in the summers 1949 and 1950.

Major communities, such as forest, marsh, bog, tundra, etc., were readily recognized. Greater difficulties were encountered with minor and micro-communities. Stands in widely separated areas showed striking similarities among themselves and with those of far-off countries (Norway, etc.). Some of these plant communities are briefly described.

**Copy seen:** DLC.

**22408. HANSON, HERBERT CHRISTIAN, 1891-** . Vegetation and soil profiles in some solifluction and mound areas in Alaska. (Ecology, Oct. 1950, v. 31, no. 4, p. 606-630, illus., tables, diagrs.)

*Contains* results of an investigation in 1949 of grassland and other types of vegetation in five localities, (1) Eagle Summit, (2) near Healy, (3) in Mount McKinley National Park, (4) Craigie Creek valley, and (5) near Kotzebue. The term solifluction and occurrence of the phenomenon in Alaska, vegetation types and their relation to solifluction are discussed.

"Vegetation and soil profiles are described in several solifluction and mound, or hummock, areas. The point-contact method was used to obtain quantitative data on the degree of cover and the frequency, or dispersion, of the species in each stand studied. The ground in the solifluction areas was hummocky and saturated with water. Peat and silt layers alternated with increasing depth, the peat indicating former surface horizons. The depth to permafrost varied from about 10-25 in. and was determined by the angle and direction of slope and the amount of insulating plant cover. The role of plants in the formation, building, and disintegration of mounds is described. Factors influencing solifluction and mound formation are degree and direction of slope, abundance of water, upper ground horizons saturated with water, a fine silt or clay horizon below the saturated layer, forces arising from freezing and thawing, an underlying layer of frozen ground or hard material, and the presence of boulders, ridges, vegetation, and other obstacles."—SIPRE. Bibliography (39 items).

A concise, scientific account of auroras (p. 1-79): their appearance, geographic distribution, extent, direction, height, connection with earth-magnetism, etc.; the light spectrum and its interpretation;

theories of the northern lights (with discussion of Birkeland and Störmer); physical condition of the atmosphere in the area characterized by auroras; other phenomena of the night sky in the auroral region; investigation of tides in highest layers of atmosphere in connection with northern lights; the sun and auroras. The Ionosphere (p. 80-106). Bibliography (117 items). **Copy seen:** DLC.

**22416. HARBOE, E. G.** Die Erdbeben-observatorium auf der Disko-Insel. (Beiträge zur Geophysik, 1912, 1915-18. Bd. 11, kleine Mitteilungen, p. 9-28, tables, diagrs.; Bd. 14, kleine Mitteilungen, p. 24-31, tables) **Title tr.:** The seismic observatory on Disko Island.

Description of the location and instrumentation of the observatory, with tabular data on distant and local disturbances, Oct. 1907-July 1909, and on local microseisms of the same period; in the continued section (p. 24-31) are data for Sept. 1910-May 1912, and some astronomical observations.

**Copy seen:** DGS.

**22417. HARDIN, JOHN R.** Engineers rush Alaskan defenses. (Military engineer, Jan. 1942. v. 34, p. 1-3, illus.)

General notes on difficulties encountered in construction of roads and airfields in Alaska: muskeg, permafrost, heavy rain, extreme cold, and problems of supply due to long distances and slow transportation.

**Copy seen:** DLC.

**22418. HARDING, A. E. BERYL.** A state practice in Swedish Lapland. (Lancet, Sept. 10, 1949. v. 257, p. 477-78)

Contains an outline of medical practice of state doctors in Sweden as compared with that in England, based on the author's observation of procedures in the Lapland district of Vilhelmina, served by two doctors and a well equipped hospital in the village of Vilhelmina. The organization of the practice is described: doctors' responsibilities, qualifications, particularly for this northern work, dispensary, clinic (dental, maternity), hospital facilities, work with tuberculosis, nursing service, doctor's salary and patients' payments, etc.

**Copy seen:** DLC.

**22419. HARDY, JAMES D.** Heat transfer. (In: Newburgh, L. H., ed., Physiology of heat regulation and the science of clothing, 1949. p. 78-108, diagrs., tables)

Contains a physical mathematical treatise on the heat exchange between the human body and its environment. Radiation, conduction; convection and evaporation are summarized and practical suggestions offered as to physiological and physical measurements required for determining these phenomena; value and limitations of methods, etc. are noted. Bibliography (39 items).

**Copy seen:** DLC.

**22420. HARDY, JAMES D.** Physiological responses to heat and cold. (Annual review of physiology, 1950. v. 12, p. 119-44)

The present review covers the period of July 1947-June 1949 and is concerned mainly with human response to thermal stress. Much of the material is of practical or military interest. The review has sections on: new methods; response to cold; response to heat; temperature of blood and tissues; vascular responses to heat and cold; studies in thermal sensation; temperature regulation. Bibliography (119 items). **Copy seen:** DSG.

**22421. HARDY, JAMES D., and T. W. OPPEL.** Stimulation of the cold end organs of the human skin by radiation. (American journal of physiology, July 1938. v. 123, p. 89-90)

Contains a summary of experiments made by concentrating "cold radiation" upon the skin with a large silver cone. Areas smaller than 3 cm.<sup>2</sup> could not be stimulated; the number of cold end-organs per unit area appeared to be greater than the number of heat endings; spatial summation of cold sensation follows the same laws as heat sense, but is poorer; heat and cold sensation are not mediated by the same end-organ; data on stimulation threshold, change in skin temperature due to "cold radiation," etc., are also presented.

**Copy seen:** DLC.

**22422. HARDY, JAMES D., and H. GOODELL.** Thermoregulatory phenomena associated with exposure to warm and cold environments. (Federation proceedings, Mar. 1947. v. 6, p. 122)

Contains a report on observations made on 20 medical students exposed, in minimal clothing and for brief periods (3-4 hours), to temperatures of 31° C. and, 16°-18° C. Measurements of metabolic rate, rectal and skin temperature, were made and other values calculated in both situations. **Copy seen:** DLC.

**HARDY, JAMES D.,** see also Wolf, S., & J. D. Hardy. Studies on pain, observations . . . pain due to cooling. 1941. No. 27473.

**22423. HARE, F. KENNETH.** Climate and zonal divisions of the boreal forest formation in Eastern Canada. (Geographical review, Oct. 1950. v. 40, p. 615-35, incl. 4 p. of illus., 4 sketch maps). Reprinted in American Geographical Society. *Readings in the geography of North America*, 1952, p. 446-66.

Contains study of the coniferous forest (south of tundra) region in northern Ontario and Quebec (Labrador - Ungava Peninsula), their characteristic cover and its relationship to climate. Following outline of structure and composition, three forest types are characterized and correlated with I. Hustich (*Arctic Bibliography* No. 7592): close-forest, lichen-woodland, muskeg; four proposed zonal divisions of the area are defined with indication of their dominant forest types. Climatic relations are discussed on basis of potential evapotranspiration of the C. W. Thornthwaite classification, with charts, thermal efficiency and moisture index; climate distributions are correlated with zonal forest divisions (for which potential evapotranspiration is tabulated). *Appendix* lists (with geographic coordinates, elevation and period of data used) about 100 climatological stations in the area.

**Copy seen:** CaMAI; DLC.

**22424. HARE, F. KENNETH.** The Labrador frontier. (Geographical review, July 1952. v. 42, p. 405-424, illus. maps, table)

Contains an account of the physical geography of the Labrador Peninsula, its mineral and other resources and their recent development, largely in the Labrador Trough. A geological outline of the trough, a folded belt consisting of an alternation of parallel ridges and valleys, extending from the central plateau northward to the coast (Cape Hopes Advance), is given; notes on the exploration of J. A. Retty since 1936, discoveries of high-grade iron ore, organization of Canadian-American mining companies since 1942 for exploitation; the Hollinger concessions in the Knob Lake region (approx. 54°40' N. 66°40' W.), problems in developing the mines; transportation, climate, power; projects to build railway (Quebec North Shore and Labrador Railway) from the port of

Seven Islands, also hydroelectric power installations; exploration by Fenimore Iron Mines Ltd. in the Leaf River region and proposal of extension of the railway to Fort Chimo; titanium find in southern Labrador and its development; other prospecting enterprises (sketch maps p. 407, 412). The forest resources of the Peninsula are characterized, and finally the significance is noted of the St. Lawrence seaway, increasing canal capacity, in relation to exploitation of natural resources of Labrador.

**Copy seen:** DLC.

**22425. HARE, F. KENNETH.** The present-day snowfall of Labrador-Ungava. (American journal of science, Sept. 1951. v. 249, no. 9, p. 654-70, 8 fig.)

"Isopleth charts of mean annual snowfall, number of days per annum with snow, November and March snowfall are presented for Labrador-Ungava Peninsula, based on a few older records and a large number of records from stations established during or since the war (station location chart also presented). Mean isobar and wind charts for Feb. 1947 show easterly flow (similar to that presupposed by Antevs for Wisconsin time glacier formation) during a month of apparently exceptionally heavy snowfall. Closer examination of the snowfall and charts for that month, however, shows that the more northerly part where winds were onshore did not receive heavy snow but did have anomalous warmth. Therefore, extreme cold and heavy snowfalls have not occurred with such a circulation pattern. Most of the snow in this region occurs in frontal or cyclonic zones, due to southerly flow overriding the surface easterlies. Effect of frozen vs. open water lakes also considered."—*Meteorological abstracts and bibliography*, Oct. 1952. v. 3, no. 10, p. 1056. Bibliography (10 items).

**Copy seen:** DLC; DWB

**22426. HARE, F. KENNETH.** Some climatological problems of the Arctic and sub-Arctic. (In: American Meteorological Society. Committee on the Compendium of Meteorology. *Compendium of meteorology*. 1951. p. 952-64, map, diagrs.)

"A review of climatological literature is presented. Ecological climatology including the arctic tree line, the forest-tundra ecotone, the boreal forest, and permafrost distribution is discussed. The distribution of sea ice and the climatolog-

ical significance is given. The main features of Hobbs' glacial anticyclone theory are summarized and the present position of meteorologists towards the theory are presented."—SIPRE. See also *Meteorological abstracts and bibliography*, Oct. 1952, v. 3, no. 10, p. 1007-1008. Bibliography (69 items).

**22429. HARLAND, W. B.** Cambridge geological expedition to Spitsbergen, 1949. (Polar record, July 1950. v. 5, no. 40, p. 612-13, illus.)

Contains note by the leader on the 13-man expedition in July-Aug. 1949 to Vestspitsbergen to make stratigraphic correlation of the geology of the northern shores of Sassenfjorden and Tempelfjorden, conduct surveys at Brucebyen, Ebbadalen, and elsewhere. As well as these studies hydrographic and meteorological observations were carried out at the base Brucebyen, and the temperature of soil polygons studied.

**Copy seen:** DLC

**22430. HARLAND, W. B.** The Cambridge Spitsbergen Expedition, 1949. (Geographical journal, Sept. 1952. v. 118, p. 309-331, 3 sketch maps, fold. map)

Contains an account (by the leader) of a thirteen-man geological expedition to the region of West Spitsbergen lying between Dickson and Sassen fiords, at the head of Isfjorden, the party's headquarters being at Brucebyen (map included).

The preliminary survey of Permo-Carboniferous and pre-Devonian rocks is described as well as soil polygons, glaciology, and the hydrographic survey; the party's equipment and food rations are noted. This paper was read at a meeting of the Royal Geographical Society, and the ensuing discussion is given p. 329-31. *Appendices* present (1) records; (2) topographical survey; (3) the topographic map, with a list of 70 additions to place names of Svalbard. This folded map (scale 1:125,000) covers central Vestspitsbergen, 78°25'-79° N. 15°30'-17°30' E.

**22431. HARNOLL, KETIL.** Nordostpassasjen som moderne samferdselsåre. (Norsk polartidende, no. 9-12, Polarboken 1951, p. 48-50, 62) *Title tr.:* The Northeast Passage in modern communication.

*Contains* sections on Norway's economic interests in, and early attempts at the Northeast Passage; recent Soviet regular, commercial traffic on the Northern Sea Route; its importance; transit traffic; ice and weather forecasts servicing the traffic; climatic factors favoring the Route at present; prospects. Summary in English. *Copy seen:* CaMAI.

**22432. HARP, ELMER.** An archaeological survey in the Strait of Belle Isle area. (American antiquity, Jan. 1951. v. 16, no. 3, p. 203-220, illus.)

*Contains* a preliminary, descriptive report on archeological reconnaissance in the summer of 1949 (to be continued in 1950) in southern Labrador and northern Newfoundland, aided by the Arctic Institute of North America and the U. S. Government. The aim of the investigation was to delineate the culture of the Beothuk or Red Indians (who once inhabited Newfoundland) and also to clarify the manifestations of the Cape Dorset Eskimo culture previously noted on Newfoundland by Dr. Jenness and Dr. Wintemberg, and to examine the possibilities of a contact between these two with a view to tracing diffusion of certain traits in the Archaic period. Data are supplied on the location of investigated sites; the discovered major occupation sites, workshop sites, camp sites and the relics found in them, etc., with conclusion that the Beothuks and Cape Dorset Eskimos had prolonged period of contact, and conjecture that this contact may have been the medium

through which certain Eskimo-like traits passed to northeastern Indians in the Laurentian. Bibliography (15 items).

**22434. HARRINGTON, LYN.** The Alaska Highway. (Canadian geographical journal, June 1951. v. 42, p. 238-59, incl. 5 p. of illus., map)

*Opening* remarks on the improved facilities for the traveler along the Highway, and a description of the scenery, populated places, bridges and rivers along the route from Dawson Creek to Fairbanks.

*Copy seen:* DGS; DLC.

**22435. HARRINGTON, LYN, and RICHARD HARRINGTON.** Haida carver of argillite. (Canadian geographical journal, July 1952. v. 45, no. 1, p. 38-40, illus.)

*Contains* description with photographs of the technique of argillite carving which has flourished among Haida Indians of Queen Charlotte Islands since about 1820. The work of Louis Collison "the last of the skilled carvers" is discussed and characteristic small totem poles with traditional motifs are illustrated in process of carving and polishing.

*Copy seen:* CaMAI; DLC.

**22436. HARRINGTON, LYN.** People who live in snow houses. (Forest and outdoors, Mar. 1949. v. 45, no. 3, p. 24-25 illus.)

*Contains* notes on present-day life in igloos and its changes from earlier times with regard to clothing, utensils and food; the advantages the seal-oil lamp, internal arrangement of the igloo, its "maintenance" etc., are outlined.

*Copy seen:* DA.

**22437. HARRINGTON, MICHAEL.** Newfoundland measures history by her sealing springs. (*Atlantic guardian*, Mar. 1952. v. 9, no. 3, p. 25-34, illus.)

Sketch of memorable events (mainly disasters to sealing ships in the spring of the year) by which domestic happenings in parts of Newfoundland are dated "before" or "after."

*Copy seen:* CaMAI.

**22438. HARRINGTON, RICHARD.** The barren land, photographs from latitude 70° North. (*Beaver*, Dec. 1951, p. 26-29, col. illus.)

*Copy seen:* CaMAI.

**22439. HARRINGTON, RICHARD.** The cheerful Eskimo. (*Beaver*, Mar. 1952. Outfit 282, no. 4, p. 7-15, illus.)

*Contains* photographs of eight individuals taken in 1951. They are Netsilik and Baffin Island Eskimos living at Spence Bay on Boothia Isthmus, the latter group migrants from Cape Dorset to find new hunting grounds. Drawings of a few of them by James Houston are also given.

*Copy seen:* CaMAI.

**22440. HARRINGTON, RICHARD.** Coppermine patrol; story and pictures. (*Canadian geographical journal*, Dec. 1950. v. 41, p. 256-69, incl. 4 p. of illus.)

Account of a sledge patrol with the Royal Canadian Mounted Police, in the Bathurst Inlet region of Northwest Territories, Jan.-Feb. 1949, with notes on the Copper Eskimos, traveling, and the work of the police.

*Copy seen:* DLC

**22441. HARRINGTON, RICHARD.** The face of the Arctic, a cameraman's story in words and pictures of five journeys in the far North. New York. Henry Schuman, Inc. 1952. 369 p. plates.

*Contains* photographs presenting "intimate, sensitive illustrations of northern life, indoors and out, day and night, under all conditions," the work of a documentary photographer. The text, based on diary notes, gives matter-of-fact-account of author's visit to Coppermine, coastal and inland dogteam trips with R. C. M. P. and Eskimos in 1949,

his experiences on the west coast of Hudson Bay and northward to Boothia Peninsula in 1950 and 1951, and occasional recollections of two earlier types. The people whom he met, Eskimos, traders, missionaries, etc., their customs and environment, are briefly characterized. Reviewed by Richard Finnie in *Beaver*, Dec. 1952, p. 49.

*Copy seen:* DLC.

**22442. HARRINGTON, RICHARD.** Journey in arctic Quebec. (*Canadian geographical journal*, Aug. 1950. v. 41, p. 90-104, illus.)

Account of a dog sledge trip with Eskimos during the early winter season, and of settlements and people on the east coast of Hudson Bay from Port Harrison to James Bay.

*Copy seen:* DGS; DLC.

**22443. HARRINGTON, RICHARD.** Last man out. (*Fur trade journal of Canada*, Oct. 1951. v. 29, no. 2, p. 14-15, 38-39, illus.)

Author's encounter with the last white fur trapper north of the Manitoba border, after the Canadian government ruled trapping rights to be reserved for natives. Some notes on the trapper's way of life.

*Copy seen:* DL

**22444. HARRINGTON, RICHARD.** The Padleimiuts. (*Canadian geographical journal*, Jan. 1952. v. 44, no. 1, p. 2-15, illus.)

*Contains* a photographer's account of the life of the southernmost tribe of the Caribou Eskimos, who live west of Hudson Bay, Keewatin District. His numerous photographs illustrate their dwellings, clothing, occupations, and amusements, etc.

*Copy seen:* DGS; DLC.

Contains a critical description of the religious beliefs and practices (including customs) of two large groups of Eurasian peoples, many of the latter, native to the far North. The author has arranged the abundant and critically appraised material (from his own investigation and printed sources) not according to the peoples of each group (except chap. 7, p. 100-12 on the Lapp *seides*), but following the objects of worship or categories of deities of each of the cultural cycles.

Part 1 (p. 3-295) *Finno-Ugric*, which covers among others, the Finns, Lapps, Zyryans, Samoyeds, Voguls and Ostyaks, has the following chapters: 1. The belief in souls; 2. Death and burial; 3-4. Memorial feasts; 5. The life beyond; 6. Animal worship; 7. The *seides* of the Lapps; 8. Family gods; 9. Heroes; 10-12. Household, forest and water spirits; 13. Gods of sky and air; 14. Fire; 15. Deities of the earth, vegetation, birth; 16-17. Sacrifices to nature gods among the Volga Finns; 18. The shaman.

Pt. 2 (p. 297-523) *Siberian*, covering among others, the Tungus, Yakuts, Chukchis, Dolgans, Kamehadals and Koryaks, has chap.: 1. World pictures; 2. The origin of the earth; 3. The pillar of the world; 4. The world mountain; 5. The tree of life; 6. Destruction of the world; 7. The creation of man; 8. The fall

of man; 9. The origin of mosquito; 10. The heaven god; 11. The sons of god; 12. The great mother; 13. The stars; 14. Thunder; 15. Fire; 16. The wind; 17. The earth; 18. The "masters" of nature; 19. Dreams, sickness and death; 20. The realm of the dead; 21. Shamanism and totemism. Notes and an extensive bibliography are appended.

**22457. HARVA, UNO, 1882-1949.** The shaman costume and its significance. Turku, 1922. 32 p. 14 illus. (Abo, Finland. Suomalainen Yliopisto. Julkaisuja, ser. B, t. 1, no. 2)

Contains ethnologic study which shows that the Finnish, Lapp, Zyryan and Ob-Ugrian shamans do not wear a special costume, and use only a cap as they shamanize; an elaborated shaman's coat with numerous "iron gewgaws", however, is common among many other northern Siberian tribes: Samoyeds, Yakuts, Yeniseians, Tungus, and Buryats. The purpose of the costume was partly to affect the spectators, but the main purpose probably was directed towards the spirits;

the effigies of helpful spirit-animals increased shaman's magic power. Thus the shaman costume is an attempt at the representation of the soul of the shaman, which wanders during the performance of his art in the form of some animal.

**22458. HARVA, UNO, 1882-1949.** Ueber die Jagdriten der Nördlichen Völker Asiens und Europas. (Suomalais-ugrilainen seura. Aikakauskirja, 1925. v. 41, no. 1, p. 1-53, 7 illus.) *Title tr.:* The hunting rites of the northern peoples in Asia and Europe.

Contains comparative ethnological investigation on the tabus and rites observed by hunters to ensure good luck, especially in bear hunting. Their womenfolk in fertile years must be kept away from the hunting weapons, game may be eaten only with due regard of certain rules. The hunter must purify himself by fumigation, he must kill an animal without torturing, by the first well-aimed stroke or shot, and he must make his excuses to the killed animal, in flattering terms (hunters often avoid mentioning the animal's proper name). The bear festival is like a human funeral, the bones of the killed animal receiving a kind of burial to prevent desecration by dogs or beasts of prey. Domestic animals only are used for sacrifices.

**22459. HARVA, UNO, 1882-1949.** Die Wassergöttheiten der finnisch-ugrischen Völker. Helsinki, 1913. iv, 295 p. (Suomalais-ugrilainen seura. Toimituksia no. 32) *Title tr.:* The water deities of the Finno-Ugric peoples.

Contains an important study which investigates the water spirits of the Lapps, Ostyaks and Voguls, Zyryans, Cheremiss, Mordvins, Estonians, Finns, and Hungarians, each people being dealt with in a separate chapter. Formerly the elements of nature itself were objects of worship (Castrén), "Mother of water" being nothing other than animated water. The entirely human-like deities of the Finno-Ugric peoples are of a later date and common only among the tribes which came in contact with peoples having a higher level of culture. The human-like deity of water developed from the idea of a local protective spirit which often had some connection with a dead ancestor. Water is a more important object in the cult and customs of agriculturists. "Mother of water" means "fertilizer" to

them. Fishers also called on a water deity for help, if such a one was already known to them.

Julkaisuja, 3:3) **Title tr.:** The snow damaged areas of Finland and their forests. This paper was also published (in Finnish) in condensed form under the same title in Terra, 1921, v. 33, p. 1–6, map)

*Contains* outline of methods and the localities (740 observation places, approx. 64°–68° N. lat.) used by the Forest Scientific Experimentation Institute in the winter of 1918–19 in its study of forests prone to snow damage. "... The total area of snow damaged forests was 4308 km<sup>2</sup>. Snow damages were caused by the weight and density of snow collected on the branches of the trees. The snow depth increased an average of 5.5 cm. with each 50 m. increase in altitude. The density of the snow increased with altitude. The average density was approximately 0.205, and the density in the highest areas ranged from 0.226 to 0.307. Approximately 74 per cent to 84 per cent of snow damaged forests were located on hills and mountains 300 m. or more above sea level. The snow on the trees was a mixture of hoar frost and

snow which had an average thickness of 20–40 mm. and a mean density of 0.15. Mild snowy winters favoring hoar frost formation and snow adhesion to the trees were most destructive. Breaking, pressing, bending and thinning of trees are called mechanical snow damages. The physiological damages include the death of the trees, decrease in growth, and subsequent decay and fungus growths."—SIPRE. Bibliography (60 items). Summary in German.

The study is based on a large number of questionnaires distributed amongst the population in which observations should be marked as to: when lands and forests were free of snow in the spring, first snow fall in autumn, snow cover during the winter, time of ice break-up and movement in the spring, etc. A general characterization of snow and ice conditions based on these observations is given, and a comparative study with the previous year (1890) made. Summary in French, 3 p. at end.

Summary of data collected by about 150 voluntary observers throughout Finland (including several in Finnish Lapland) for the Central Meteorological Institute at Helsinki. Tabulation with brief explanatory text, of daily (Oct. 1891-May 1892) measurements of snow depth and density; data on frequency of blizzards, thickness and strength of river and lake ice, duration of ice and snow in various localities. Summary in French.

**22501. HEIZER, ROBERT FLEMING, 1915-**. Incised slate figurines from Kodiak Island, Alaska. (American an-

tiquity, Jan. 1952. v. 17, no. 3, p. 266, illus.)

*Contains* a brief description and illus. of 25 figurines recently supplied by Mr. Donald Clark of Kodiak. They are discussed in relation to petroglyphs from Southeast Asia and British Columbia as "three links of a chain," with remark that at present they "appear to be a distinctive feature of the later, prehistoric Kodiak Island culture." Bibliography (2 items). *Copy seen:* DSI-M.

**22502. HEIZER, ROBERT FLEMING, 1915-** . Notes on Koniag material culture. (Alaska. University. Anthropological papers, 1952. v. 1, no. 1, p. 11-19, 2 illus., 4 plates)

*Contains* description of artifacts from Kodiak Islands to be attributed to the indigenous Koniags or Pacific Eskimos; besides familiar Eskimo items, there are some artifacts of Aleutian and Athabaskan Indian type, imported from the mainland. The collection is preserved at the University of California Museum of Anthropology in Berkeley and resulted from the activities of the Alaska Commercial Company some 60-70 years ago. The items described are: objects of dress and adornment (boots), hunting implements (spear-throwers, arrows, harpoons, lances and other fishing equipment), household implements and tools, and objects for ceremonial use. Bibliography (21 items). *Copy seen:* DLC.

**22503. HEIZER, ROBERT FLEMING, 1915-** . A Pacific Eskimo invention in whale hunting in historic times. (American anthropologist, Jan.-Mar. 1943. v. 45, no. 1, p. 120-22, plate)

*Contains* an account of "the standard Aleutian whale hunt" with lances having points poisoned with a preparation from the roots of aconite plants. This method was known to a select group and served as a basis for their social standing. Descriptions of native sea-otter hunting and its effects on whaling are also included. Bibliographic footnotes.

**22504. HEIZER, ROBERT FLEMING, 1915-** . The sickle in aboriginal western North America. (American antiquity. Jan. 1951. v. 16, no. 3, p. 247-52. illus.)

*Contains* an account of the oldest sickles from the Near East, those of the aboriginal Kamchadals of the Kamchatka Peninsula, those in use on Kodiak Island and the sickles of aboriginal western

North America. The Kamchadal and Kodiak sickles are described as made from the shoulder blade of whales, curved and flat and keen; their possible derivation in this area is discussed. Bibliography (25 items). *Copy seen:* DSI-M.

**22505. HELAAKOSKI, A. R.** Havaintoja jäätyämisilmäiden geomorfologisista vaikutuksista. Helsingfors, 1912. vi, 108 p., illus. (Geografiska föreningen i Finland. Meddelanden, v. 9, no. 1) *Title tr.:* Observations on the geomorphological results of frost action.

*Contains* a study of the influence exerted by the ice cover and freezing, upon the bottom of the sea, lakes, rivers as well as bogs and solid ground. Conditions in the sea were largely investigated on the shores of the Gulf of Bothnia; freezing caused mainly a translocation of stones, gravel and other bottom material. Similar effects were observed in a lake, with trees growing on the shores often being overturned as a result of the lateral pressure of the lake's ice cover. Similar effects were observed in rivers, with the outgoing ice forming, in addition, mounds along the shores and carrying bottom material downstream. The effect of freezing on bogs though fundamentally similar, becomes more complicated when repeated thawing occurs and water penetrating under the ice crust becomes frozen again. The physical effects of freezing on solid ground, manifested largely by dislocations of various kinds, are described in detail. Summary in German. *Copy seen:* DLC.

Contains a critical revision of 26 species (one new) of hymenoptera of subfamilies Ibalinae and Figitinae (fam. Cynipidae) occurring in Finland, including five species native to Finnish and Russian Lapland.

**Copy seen:** DLC; MH-Z.

**22545. HELLÉN, WOLTER, 1890- .** Übersicht der Ptiniden (Col.) Finnlands. (Notulae entomologicae, 1925. v. 5, no. 4, p. 118-23) **Title tr.:** Revision of Ptinidae (Col.) of Finland.

Contains a critical revision of Finnish species of coleopterous family Ptinidae with synopsis of the genera and species and critical notes on 11 beetles of this family, including *Tipnus unicolor*, *Ptinus raptor* and *P. villiger* from Finnish and Russian Lapland (Ponoy 67°10' N. lat.).

**Copy seen:** DLC; MH-Z.

**22546. HELLÉN, WOLTER, 1890- .** Veränderungen in der Kenntnis der Insektenfauna Finnlands bis zum Jahr 1921. (Notulae entomologicae, 1921, v. 1: no. 2, p. 59-64; no. 3, p. 92-96; no. 4, p. 120-28; 1922, v. 2: no. 4, p. 123-28; 1923, v. 3: no. 1, p. 29-32, no. 2, p. 60-64) **Title tr.:** Changes in the knowledge of insect fauna of Finland prior to 1921.

Contains a systematic list of additions to (newly discovered species, varieties raised to the status of species, etc.) and exclusions (wrongly described species, species reduced to varieties or synonyms, species wrongly recorded in Finland, etc.) from the insect fauna of Finland prior to 1921 (ca. 1839-1920). List of abbreviated personal names and periodicals used throughout the text, appears at beginning of the work, a statistical table at the end of the work (v. 3, p. 63); includes many species native to northern regions of Finland. This study was continued as the author's *Verzeichnis . . . in 1921-1925*, 1926, q. v.

**Copy seen:** DLC; MH-Z.

**22547. HELLÉN, WOLTER, 1890- .** Verzeichnis der in den Jahren 1921-1925 für die Fauna Finnlands neu hinzugekommenen Insektenarten. (Notulae entomologicae, 1926. v. 6, no. 1, p. 27-32; no. 2, p. 60-64; no. 3, p. 90-96) **Title tr.:** A list of species added to the insect fauna of Finland for the years 1921-25.

*Contains* in this work with a somewhat misleading title, a systematic list of additions (Zugänge) to, and exclusions (Abgänge) from the insect fauna of Finland for the years 1921-25. The inventory includes some arctic species. Developing out of the author's *Veränderungen in . . . Insektenfauna . . . 1921, q. v.*, this became the first of a series of five-year reviews which continues to the present time. **Copy seen:** DLC; MH-Z.

**22548. HELLÉN, WOLTER, 1890- .** Verzeichnis der in den Jahren 1926-1930 für die Fauna Finnlands neu hinzugekommenen Insektenarten. (Notulae entomologicae, 1931. v. 11, no. 2, p. 51-66) **Title tr.:** A list of species added to the insect fauna of Finland for the years 1926-30.

*Contains* a systematic list of added and excluded species of the insect fauna of Finland for the years 1926-30, including some arctic species.

**Copy seen:** DLC; MH-Z.

**22549. HELLÉN, WOLTER, 1890- .** Verzeichnis der in den Jahren 1931-1935 für die Fauna Finnlands neu hinzugekommenen Insektenarten. (Notulae entomologicae, 1936. v. 16, no. 2, p. 43-63) **Title tr.:** A list of species added to the insect fauna of Finland for the years 1931-35.

*Contains* a systematic list of insect species added to and excluded from the fauna of Finland for the years 1931-35, including some arctic species.

**Copy seen:** DLC; MH-Z.

**22550. HELLÉN, WOLTER, 1890- .** Verzeichnis der in den Jahren 1936-1940 für die Fauna Finnlands neu hinzugekommenen Insekten-Arten. (Notulae entomologicae, 1941. v. 21, no. 1, p. 44-48; no. 2, p. 77-80; no. 3, p. 81-98) **Title tr.:** A list of species added to the insect fauna of Finland for the years 1936-40.

*Contains* a systematic list of insect species added to and excluded from fauna of Finland for the years 1936-40, including some arctic species.

**Copy seen:** DLC; MH-Z.

**22551. HELLÉN, WOLTER, 1890- .** Verzeichnis der in den Jahren 1941-1945 für die Fauna Finnlands neu hinzugekommenen Insektenarten. (Notulae entomologicae, 1946, pub. 1947, v. 26, no. 3-4, p. 122-42) **Title tr.:** A list of species added to the insect fauna of Finland for the years 1941-45.

*Contains* a systematic list of the species added and excluded, during 1941-45: 1026 species were added bringing the number of all known insect species in Finland up to 14,349. Some arctic species are included. **Copy seen:** CU.

**22552. HELLÉN, WOLTER, 1890- .** Verzeichnis der in den Jahren 1946-1950 für die Fauna Finnlands neu hinzugekommenen Insektenarten. (Notulae entomologicae, 1952. v. 32, no. 1-3, p. 59-80) **Title tr.:** A list of species added to the insect fauna of Finland for the years 1946-1950.

*Contains* a systematic list of the added and excluded species, with 687 species added bringing the number of all known species in Finland up to 15,036. Includes some arctic species. This is the latest of the series of such works for five-year periods from 1921-25 (pub. 1926).

**Copy seen:** MH-Z.

**22553. HELLÉN, WOLTER, 1890- .** Verzeichnis der in Ostfennoskandien nur aus den russischen und norwegischen Teilen bekannten Käferarten nebst Bemerkungen über ihr heutiges Vorkommen in Finnland. (Notulae entomologicae, 1930, v. 10, no. 1, p. 1-17, map) **Title tr.:** A list of beetles of eastern Fennoscandia previously known only from its Norwegian and Russian sections with notes on their present-day occurrence in Finland.

*Contains* a discussion of the natural (non-political) limits of Fennoscandia and a list of 71 species of beetles, previously known only from northern Norway or Russian Lapland and Karelia, but now found in Finland; also synonyms, wrongly described and doubtful species (small type). At least 36 species native to Finnish and Russian Lapland are included. Bibliography (71 items).

**22566. HEMINGWAY, ALLAN.** Physiological effects of heat and cold. 1 (Annual review of physiology, 1945, v. 7, p. 163-80)

Review of publications that appeared since 1940 on the subjects of: nervous control of temperature regulation; endocrine control of physiological temperature regulation; circulation; physiological response to warm environment; body temperatures and their variations; age and temperature regulation; comparative physiology of temperature regulation; hypothermia; tissue injury caused by cold (frostbite). Bibliography (58 items).

*Copy seen:* DSG.

**22567. HEMINGWAY, ALLAN.** The standardization of temperature regulatory responses of dogs to cold. (American journal of physiology, Mar. 1940. v. 128, p. 736-46, 2 fig.)

Contains a report of observations on dogs exposed to an environment of a fixed, cool temperature, fixed humidity and air movement, and submitted to measurements of respiratory rate, shivering, rectal and skin temperatures. After vasoconstriction and shivering occurred, the dogs were warmed by diathermy at a heating rate equal to the b. m. r. From the graphs, the skin and rectal temperature thresholds were obtained for vasoconstriction, vasodilatation and shivering. These values, obtained in a controlled environment, with a controlled heating rate, are to be used as "normal standards" in studies on impairment of the temperature regulatory mechanism caused by drugs or lesions. Bibliography (15 items).

**22568. HEMSTOCK, RUSSELL A.** Engineering in permafrost in Canada's Mackenzie valley. (International Conference on Soil Mechanics and Foundation Engineering. 2d, Rotterdam, June 1948. Proceedings. v. 4, p. 62-64, illus. Also pub. as: National Research Council of Canada. Associate Committee on Soil and Snow Mechanics. Technical memorandum no. 13, June 1949)

"Permafrost extends to a depth of 150 ft. at Norman Wells with seasonal thawing occurring in the first 5 ft. Special construction procedures must be observed to avoid settling and heaving damages. Conventional construction during the Canol project resulted in extensive deformation of buildings during the first

six years. Steam jets are used for digging the holes for the piles. The construction plans included an air space between the ground and the floor. Utility pipes are usually placed above ground supported by iron piles at 7-9 ft. intervals. Frost action is diminished on roads and airstrips when moss and scrub are centered in the grade, packed and covered with a filled subgrade. The basic principles of construction are anchoring the foundation in permafrost, the maintenance of the permafrost level, prevention of frost heaves, and provision for adequate drainage."—SIPRE.

tomologisk historie. Kjøbenhavn, Entomologisk forenings forlag, 1921-37.

578 p. illus., ports. (Entomologiske meddelelser, 1921. Bd. 15, hefte 1, p. 1-48, 1922, hefte 2, p. 49-96; 1924, hefte 3, p. 97-144; 1925, hefte 4, p. 145-92; 1926, hefte 5, p. 193-240; 1927, hefte 6, p. 241-88; 1936, hefte 7-8, p. 289-384; 1937, hefte 9-10, p. 385-480; hefte 11-12, p. 481-578) *Title tr.* A review of the history of entomology in Denmark.

*Contains* a history of the progress of entomology in Denmark from olden times until 1937, with biographical sketches of entomologists and collectors, data on their scientific activity, travels, collections and published works; bibliography (about 450 items), p. 546-62; index of the names, p. 563-76. Includes historical, biographical and bibliographical data on some explorers of arctic regions (especially Greenland). *Copy seen:* MH-Z.

**HENRIQUES, OLGA B.,** *see* Henriques, S. B., & others. Influence of cold on blood fibrinogen. 1949. No. 22576.

**22576. HENRIQUES, S. B., and others.** Influence of cold on blood fibrinogen concentration. (Society for Experimental Biology and Medicine. Proceedings, May 1949. v. 71, p. 82-84, fig., table) *Other authors:* O. B. Henriques and H. Selye.

*Contains* a report on experiments with rats exposed to a temperature of 2°-5° C. and fasted 24 hours before being bled. Exposure to cold caused a fall in plasma-fibrinogen concentration; the fall was maximal at the end of 24 hrs., was followed by a slight rise to a subnormal level, which persisted as long as 21 days after the beginning of exposure. Bibliography (7 items). *Copy seen:* DLC.

**22577. HENSCH, AUSTIN, and others.** Some responses to hot and cold test meals. (Journal of applied physiology, Oct. 1949. v. 2, p. 208-216, 4 fig.) *Other authors:* H. L. Taylor, and A. Keys.

*Contains* a report on the effects of hot and cold meals on some body functions which are regulated—at least partially—by the autonomic nervous system. Gastric motility, blood pressure, blood sugar concentration, pulse rate, skin temperature and electrocardiographic responses were measured both before and after internal thermal stimulation by a test meal. Bibliography (19 items).

*Copy seen:* DLC.

**22578. HENSEL, HERBERT.** Auslösung von Kältezittern durch Kohlen-säureatmung. (Pflügers Archiv für die gesamte Physiologie, 1949. Bd. 252, p. 107-110) *Title tr.:* Shivering caused by inhalation of CO<sub>2</sub>.

*Contains* an account of experiments which demonstrated that shivering due to cold exposure of men is much enhanced by breathing air containing CO<sub>2</sub> (3 percent). When the body is kept warm no effect is observed. Alternate inhalation of CO<sub>2</sub> and of pure air caused an alternating appearance and disappearance of shivering, with a lag of 15 seconds. Bibliographical footnotes.

**22579. HENSEL, HERBERT.** Die intracutane Temperaturbewegung bei Einwirkung äusserer Temperaturreize. (Pflügers Archiv für die gesamte Physiologie, 1950. Bd. 252, p. 146-64, 13 fig.) *Title tr.:* Intracutaneous temperature fluctuation caused by external temperature stimuli.

*Contains* a theoretical and experimental study, made with two methods which permit intracutaneous measurement of temperature at an exact depth. A description of the apparatus and methods is given. The data, which represent heat conductivity of the living skin, are in very good agreement with known, theoretical values. Bibliography (over 30 items). *Copy seen:* DLC.

**22580. HENSEL, HERBERT.** Temperaturempfindung und intracutane Wärmebewegung. (Pflügers Archiv für die gesamte Physiologie, 1950. Bd. 252, p. 165-215) *Title tr.:* Temperature perception and intracutaneous heat movement.

*Contains* a report on experiments which enabled simultaneous application of thermic stimuli combined with observations on temperature perception and, intracutaneous temperature fluctuation at an exact depth of 0.06-2 mm. The skin of the arm of five subjects was investigated; thermic stimuli of 15° C. and 40° C. were used, the subjects being kept in a room with constant temperature and humidity. Problems of adaptation, after-sensation, effect of rate in temperature change on sensation, effect of the stimulating area, etc., are investigated and analyzed. Bibliography (about 80 items). *Copy seen:* DLC.

**22581. HENTSCHEL, ERNST, 1876- .** Die Planktonbevölkerung der Meere um Island. (Deutsche wissenschaftliche Kommission für Meeresforschung. Berichte, 1941. Neue Folge, Bd. 10, p. 117-94, 8 plates, diags.) *Title tr.:* Plankton population of the sea around Iceland.

A quantitative and qualitative study of plankton in August, with briefer section of the Feb.-Mar. diatom population, in waters which include a section across Denmark Strait and for a short distance into southwestern Greenland Sea. Bibliography (30 items). *Copy seen:* DL.

**22582. HENTSCHEL, ERNST, 1876- .** Über den Ursprung der Heringsnahrung im Norden von Island. (Deutsche wissenschaftliche Kommission für Meeresforschung. Berichte, 1937. Neue Folge, Bd. 8, p. 201-219, illus., tables, diags.) *Title tr.:* On the source of the food of herrings north of Iceland.

From a study of copepod (*Calanus*) and other plankton from net hauls and stomach contents of herring in the waters along the northern coast of Iceland, the author contributes toward solution of the open question of fluctuations of herring and source of the plankton in this region. Bibliography (15 items).

**22588. HERMAN, LOUIS, and H. LEIN-BACH.** A photographic study of changes of the infrared emission of the polar aurora. [College, Alaska] 1951. 4 p. photos. (Alaska. University. Geophysical Institute. Experimental investigation of the upper atmosphere during periods of auroral activity. Con-

tract AF 19 (122)-431. Scientific report no. 3). Also pub. as: American Geophysical Union. Transactions, Oct. 1951. v. 32, p. 679-82, illus.)

Contains results of a semi-quantitative comparison of two sequences of pictures of the polar aurora made at College, Alaska, with the use of panchromatic film and green filter and infrared film and red filter.

"In changes of color in the rayed bands and draperies observed in auroral displays, the most striking change at high latitudes is the appearance of a red lower edge; this type B aurora is studied by pairs of pictures taken simultaneously of the aurora by two "Robot" cameras. Panchromatic film with a green filter and infrared film with a red filter are used. Measured relative intensity ratios of the infrared and green pictures and sequences of pictures are given and interpreted."—*Meteorological abstracts and bibliography*, May 1952. v. 3, p. 470.

**22602. HESS, HANS.** Über die Elastizitäts-Konstanten des Eises. (Zeitschrift für Gletscherkunde, Apr. 1940. Bd. 27, p. 1-19, incl. tables, graphs) **Title tr.:** On the elastic constants of ice.

"Data from earlier experiments were used to establish the dependency of

\*See also under Russian form of author's name (Герц) No. 22085-22087.

Young's modulus on temperature and pressure within the range of 0-9° C. Functional relationships involving Poisson's ration, the factor of incompressibility, the modulus of torsion, and Young's modulus were obtained. In measuring glacial depths with seismic waves, it was shown that in order to use appropriate velocity formulas, which are dependent on the above mentioned factors, a correction factor (between 1.5 and 3) must be applied to Young's modulus. Application of these formulas in connection with the seismic method yielded smaller depths for Greenland ice than had previously been found."—SIPRE. **22605. HEUSSER, CALVIN J.** Pollen profiles from southeastern Alaska. (Ecological monographs, Oct. 1952. v. 22, no. 4, p. 331-52, diagrs., maps)

Contains account of a study made in 1950 and 1951 on peat sections from

muskegs near Ketchikan, Wrangell, Petersburg, Sitka and Juneau. It was aimed toward elucidating post-glacial forest successions and climate. The account proper is preceded by sections on present physical geography, climate, glaciation and vegetation. The time represented by the pollen profiles (8,000 years ago till the present) is divided into five periods having distinctive forest types and successions, indicative of climatic conditions of each period and their changes. Evidence of vulcanism, change in sea level and glacier fluctuations was also found in the material and is presented. Bibliography (about 75 items). **Copy seen:** DLC.

**22620. HILDÉN, KAARLO, 1893-** . Notes on the physical anthropology of the Ostyak-Samoyeds; based upon data collected by Kai Donner. (Suomalais-ugrilainen seura. Aikakauskirja, 1939. v. 50, no. 4, p. 1-25, 6 illus., map)

*Contains* evaluation of the material collected by K. Donner in 1911-14, referring mostly to the Ostyak-Samoyeds living near the town of Ust-Tym (59°29' N. 80°10' E.) and in the region of the middle Ob' River and its tributaries. These people are the southernmost representatives of the Samoyeds; they inhabit the tundra between the rivers Ob' and Yenisey, and number close on 4,500 according to the census of 1926-27. Anthropological observations and measurements were made of 37 individuals, including three women. Author concludes that Ostyak-Samoyeds are not Mongoloid and can be considered as belonging to the "Paleosiberian race." They are characterized by eyes and hair of a dark color, very low stature, a comparatively large head (index varying between high mesocephaly and low brachycephaly), and comparatively small facial measurements. In a few cases, fair hair and light-coloured eyes occur. Points of great similarity can be established between this group and their kinsmen further north.

**22621. HILDÉN, KAARLO, 1893-** . Some notes on the anthropology of the

Kamasses made by Kai Donner. (Suomalais-ugrilainen seura. Aikakauskirja, 1939. v. 50, no. 5, p. 1-9, 17 photos)

*Contains* racial investigation of a tribe dying out which linguistically belongs to the southernmost group of Samoyeds and dwells on the northern slopes of the Sayan Mts. It comprised about 150 individuals when Castrén visited it in 1847, reduced to 90 by 1875, probably due to high child mortality. Kai Donner visited the last Kamasses in the village of Abalakova in 1914, and made some anthropological observations, measurements and photos of about ten individuals. Hildén concludes that the Kamass type cannot be called Mongoloid on the whole (although they are the only Samoyeds among whom Mongolian features can be observed) as they retained many of the somatic characteristics found among Samoyeds living further north.

**22623. HIMMELHEBER, HANS, 1908-** . Eskimokünstler. Teilergebnis einer ethnographischen Expedition in Alaska von Juni 1936 bis April 1937. Stuttgart, Strecker und Schröder, 1938. viii, 111 p., 20 illus. on 10 leaves, 8 plates, map. *Title tr.*: Eskimo artist. Partial results of the Ethnographic Expedition in Alaska, June 1936-April 1937.

Psychological and ethnological study of contemporary Eskimo art and artists, based mainly on the author's observations of Eskimo artists (listed on p. 8) at work during his sojourn in the Kuskokwim River valley and on Nunivak Island, and during his trips to Point Barrow and to Diomed, King and St. Lawrence Islands. Following introductory remarks on eco-

conomic conditions, seasonal occupations, homes, working conditions and religious and social customs, the author discusses function and characteristics of modern Eskimo painting, p. 19-32, drawing, p. 33-36, plastic art (especially mask-making), p. 36-56; Eskimo artists: their talents, social position, personalities; artistic methods and motivation, the subjects, technique, style and traditions of their art, p. 57-111; comparative remarks on old Eskimo art (especially ivory carving) and on modern Negro art of West Africa, with comment that the Negro artist is chiefly concerned with the aesthetic form, and the Eskimo artist with the content or subject matter of his work (p. 11-12). Includes bibliography (25 items); sketch map (p. viii) showing the author's itinerary in Alaska, and (at end) sketches of motifs and photographic illustrations of Eskimo drawings and of artists at work. Reviewed by Margaret Lantis in *American anthropologist*, 1942. v. 44, p. 123-24.

**22624. HIMMELHEBER, HANS, 1908-** . Der gefrorene Pfad. Volksdichtung der Eskimo. Eisenach, Erich Röth, 1951. 137 p., illus. **Title tr.:** The frozen path. Folktales of the Eskimo.

Collection of myths and tales made by the author with the aid of a native interpreter on Nunivak Island and in the Kuskokwim River valley. The material is grouped: myths, legends and lore of origin, animal stories, sagas and tales, ancestor stories; and to the texts are occasionally added the interpreter's explanation or comment in footnotes. Preceding the texts is an extensive anthropological introduction by the author, outlining the distribution of Eskimo population and language, differences between southwest Alaskan and other Eskimo dialects; the material and social culture of Nunivak and Kuskokwim Eskimos, their economic and family life, lack of clear-cut tribal organization. Their ways of story telling are described and its relation to the dance, song, visual arts and religion discussed. Eskimo prose tales are characterized, and their descriptive and idyllic elements, their age and similarities to tales of other folk indicated.

**22638. HOCK, RAYMOND J.** The metabolic rates and body temperatures of bats. (Biological bulletin, Dec. 1951. v. 101, no. 3, p. 289-99, diags., tables)

*Contains a study on the effect of environmental temperatures of near 0° C. to over 40° C. on metabolic rates and temperatures of the little brown bat, and a comparison with similar data on other bats. Body temperature was approximate to that of the ambient air, so that metabolic rate was measured along this range; a close correspondence between body temperature and ambient temperature was also found in other bats. When exposed to near-freezing temperatures the animals increased metabolism over that found at 2° C. The daily reduction in body temperature (which is apparently due to lack of a thermoregulatory mechanism) was not found to be fundamentally different from that during hibernation. This report is a portion of a Ph. D. thesis to Cornell Univ.*

**22651. HØYGAARD, ARNE, 1906-** Tuberculosis in Eskimos. (Lancet, Sept. 24, 1938, v. 235, p. 758-59, map)

Report of an investigation made by the Norwegian Medical Expedition in 1936-37 in Angmagssalik, East Greenland, inhabited by 806 pure-blood Eskimos. Of 106 living in or near the trading station 10 percent were found to suffer from tuberculosis, whilst in the outlying settlements only 11.5 per cent were so found. Blood-spitting and nose-bleeding is common but not so serious a sign as elsewhere; it is due to an unusually vulnerable respiratory tract. Vitamin-C (or vitamin-P) deficiency is uncommon except in the trading center. In four southern communities (population 111) no tuberculosis was found and it is probable that tuberculosis may die out in isolated settlements. To combat infection the population should be prevented from congregating round the trading center. Bibliography (8 items).

**22654. HOLGERSEN, HOLGER.** Ants of northern Norway (Hym., Form.) Tromsø, K. Karlsens tryk., 1942. 33 p., map. (Tromsø, Norway. Museum. Aarshefter, 1940. Bd. 63, nr. 2, Naturhistorisk avd. 24)

Contains a critical revision of 19 species of the ant fauna of northern Norway (Nordland, Tromsø, Finnmark), with tables of subfamilies, genera and species, additional list of localities, bibliography (21 items), and a map showing the division of northern Norway into biogeographic sectional areas.

**Copy seen:** DSI-M;MH-Z.

**22655. HOLGERSEN, HOLGER.** Bestemmelsetabell over norske maur (Hym. Formicidae). (Norsk entomologisk tidsskrift, 1943. Bd. 6, hefte 4-5, p. 164-82, illus.) **Title tr.:** Tables for the determination of Norwegian ants.

Contains a table for the determination of subfamilies, genera and species of Norwegian ants (Formicidae) and a table of distribution of 24 species and 14 varieties and subspecies in 20 biogeographic regions of Norway, including Nordland, Tromsø and Finnmark.

**Copy seen:** MH-Z.

**22656. HOLGERSEN, HOLGER.** Bidrag til Norges Formicidafauna. (Norsk entomologisk tidsskrift, 1938. Bd. 5,

hefte 2, p. 74-78) *Title tr.*: A contribution to Norwegian Formicidae.

*Contains* a list of 22 species of ants inhabiting Norway, including 12 species, native to Finnmark, Tromsø and northern Nordland, and list of localities for all species. *Copy seen*: MH-Z.

**22657. HOLGERSEN, HOLGER.** *Formica gagatoides* Ruzs. in Norway. Tromsø, P. Norbye, 1943. 17 p., illus., plate. (Tromsø. Norway. Museum. Aarshefter, 1941. Bd. 64, nr. 1, Naturhistorisk avd. nr. 26)

*Contains* a study of identity and taxonomy of an ant, *Formica gagatoides* known from the Murman and Yakutsk regions and then found in Norway, including Tromsø province; bibliography (22 items).

*Copy seen*: DSI-M; MH-Z.

**22658. HOLGERSEN, HOLGER.** Hymenoptera aculeata, Fam. Formicidae. (In: Brinck, P. S. V., and K. G. Wingstrand, *Mountain fauna of Virihaure*, 1949-51. pt. 2, p. 65-68.)

*Contains* description of two species of ants, *Leptothorax acervorum* and *Formica gagatoides*, found in Virihaure area of Lule Lappmark, with data on their habitat, ecology and their Scandinavian and total distribution.

*Copy seen*: MH-Z.

**22659. HOLGERSEN, HOLGER.** Myrmekologiske notiser I-II. (Norsk entomologisk tidsskrift, 1940, Bd. 5, hefte 4, p. 183-87; 1942, Bd. 6, hefte 2-3, p. 93-98) *Title tr.*: Myrmecological notes I-II.

*Contains* (in pt. I) a list of 13 species and one variety of ants with brief descriptive notes and data on distribution, including *Myrmica loevinodis*, captured by Esmark in Polmark, Finnmark (77°06' N.) the most northern locality for that species. In pt. II, are historical notes on the study of *Harpagozenus sublaevis*, a list of Norwegian localities and data on general distribution. Summary in English (Pt. I), and German (pt. II).

*Copy seen*: MH-Z.

**22660. HOLGERSEN, HOLGER.** Norske sikader (Homoptera cicadina) II. Underfam. Tettigoninae, Acocephalinae, Bythoscopininae, (excl. *Macropsis*). (Bergen, Norway. Museum. Aarbok; naturvidenskabelig, rekke, 1944, pub. 1945, nr. 9, p. 1-37, text maps 1-5) *Title tr.*: Norwegian cicadas (Homoptera cicadina) II. Subfamilies Tetti-

goninae, Acocephalinae, Bythoscopininae (excl. *Macropsis*).

*Contains* data on distribution of 39 species of cicadas (Homoptera cicadina) in Norway, including ten new to the fauna of Norway and six species occurring in Nordland, Tromsø and Finnmark counties, with lists of localities for each species and a table of distribution in faunistic regions of Norway. For pt. I of this study, see *Arctic Bibliography*, No. 7247.

*Copy seen*: MH-Z.

**22661. HOLGERSEN, HOLGER.** Norske sikader (Homoptera cicadina) III. De norske arter av slekten *Thamnotettix* Zett. 1839. (Norske entomologisk tidsskrift, 1945. Bd. 7, hefte 3-4, p. 107-114, text map) *Title tr.*: Norwegian cicadas (Homoptera cicadina) III. Norwegian species of the genus *Thamnotettix* Zett. 1839.

*Contains* a critical revision of eight Norwegian cicadas of the genus *Thamnotettix* and data on their distribution in Norway (see text map and table on p. 113); includes *T. prasinus* and *subfuscus* having a wide distribution from the south to about 70° N.; *T. cruentatus* (Tromsø) and *T. torneelus* found rarely in Finnmark. Summary in English.

*Copy seen*: MH-Z.

**22662. HOLGERSEN, HOLGER.** Om den del norske fulgorider (Norske sikader, Homoptera cicadina, IV). (Norsk entomologisk tidsskrift, 1946. Bd. 7, hefte 5, p. 149-55) *Title tr.*: On Norwegian fulgorids. (Norwegian cicadas, Homoptera cicadina, IV)

*Contains* a systematic survey of 14 species of Norwegian fulgorids and a table of their distribution in Norway, including *Criomorphus bicarinatus* and *C. borealis* found in Saltdalen, about 67° N. Summary in English.

*Copy seen*: MH-Z.

**22663. HOLGERSEN, HOLGER.** Tre maur-arter som bør ettersøkes i Sverige (Hym., Formicidae). (Norsk entomologisk tidsskrift. 1944. Årg. 65, häft. 3-4, p. 199-202) *Title tr.*: Three ant species occurring in Sweden (Hym., Formicidae).

*Contains* a critical study of three Swedish species of hymenopterous genus *Formica* (*Serviformica*), including *F. gagatoides* known from northern Siberia and European Russia (Arkhangel'sk province, Kola Peninsula) and Swedish Lapland and northern Norway, and com-

parison with other northern related species of the same genus.

**Copy seen:** DA; MH-Z.

**22664. HOLIK, O.** *Zygaena exulans* var. *polaris* m. (nov. var.) und *Zyg. exulans* ssp. *vanadis* Dalm. (Entomologisk tidskrift, 1935. Årg. 56, häft. 1-2, p. 47-51)

Contains a German diagnosis of *Zygaena exulans polaris* n. var., a moth collected on Rybachyiy Peninsula (70° N.) on the Murman coast by W. Kotzsch-Blasewitz; and a comparative taxonomic study of *Z. exulans*, *Z. exulans* ssp. *vanadis* (Kvikkjokk, Lule Lappmark and Snuritjokko, Torne Lappmark) and *Z. vanadis*. **Copy seen:** DA; MH-Z.

**22665. HOLLAND, DAN.** The trophy is still there. (Elks magazine, Dec. 1952. v. 31, no. 7, p. 6-7, 39-42, illus.)

Contains popular account of author's experiences in northern Alaska Aug. 1952, while assisting Clarence Rhode, Alaskan regional director of the Fish and Wildlife Service, in a game survey especially of the white Dall sheep in the Brooks Range (1500 were counted). River basins on the north slope of the Range from Chandler River eastwards to Canadian border were covered. Flying weather, terrain, wild life, vegetation, Eskimos of one village visited (70 population), particularly their hunting, are noted.

**22667. HOLLER, K.** Hydrothermale Zersetterscheinungen an grönländischen Basalten. (In: Linck, G., and E. Blanck. Chemie der Erde, 1933. Bd. 8, p. 25-44, illus.) **Title tr.:** Hydrothermal breakdown phenomena in basalts of Greenland.

Detailed discussion of results of chemical analyses and petrographic study of red products of hydrothermal decomposi-

tion which occur in the basalts of Lyngemarkensfeld near Godthavn on the island of Disko, West Greenland. The rocks lie under zeolithic cemented basalt-breccia which is overlain by compact basalt. Samples of the red products were collected by the Hessian Greenland Expeditions of 1925 and 1929. Bibliography (32 items). **Copy seen:** DGS.

**22668. HOLM, ÅKE.** Opiliones, Araneae. (In: Brinck, P. S. V., and K. G. Wingstrand. Mountain fauna of Virihaure, 1949-51, pt. 2, p. 138-49, illus.)

Contains a systematic list of one opiloid, *Mitopus morio*, and 55 spiders (in 11 families) native to Virihaure area of Lule Lappmark, with data on habitat and total distribution.

**Copy seen:** MH-Z.

**22669. HOLM, ÅKE.** Revision einiger norwegischer Spinnen-arten und Bemerkungen über deren Vorkommen in Schweden. (Entomologisk tidskrift, 1944. Årg. 65, häft. 3-4, p. 122-34, illus.) **Title tr.:** Revision of some Norwegian spider species and notes on their occurrence in Sweden.

Contains descriptive notes and data on distribution in Sweden of eight Norwegian spiders, including six species native to Swedish Lapland or the northern region of Norway. **Copy seen:** DA, MH-Z.

**22670. HOLM, ÅKE.** Zur Kenntnis der Spinnenfauna des Torneträskgebietes. (Arkiv för zoologi, 1945. Bd. 36A, no. 15, p. 1-80, illus.) **Title tr.:** A contribution to the knowledge of the spider fauna of the Torneträsk region.

Contains a systematic list of 168 species of spiders found in the vicinity of Torneträsk, Torne Lappmark, and descriptions of ten new and 32 little known species, with synonymy, amended data and notes on distribution.

**Copy seen:** DSI-M; MH-Z.

**22671. HOLM, ÅKE.** Zur Kenntnis der Taxonomie, Ökologie und Verbreitung der schwedischen Arten der Spinnengattungen *Rhaebothorax* Sim., *Typhochraestus* Sim. und *Latithorax* n. gen. (Arkiv för zoologi, 1943. Bd. 34A, no. 19, p. 1-32, illus., plates 1-3) **Title tr.:** A contribution to the study of the taxonomy, ecology and distribution of Swedish species of the spider genus *Rhaebothorax* Sim., *Typhochraestus* Sim. and *Latithorax* n. gen.

Contains a critical revision of five Swedish species of the spider genus

*Rhaebothorax*, *Typhochraestus pallidus* and two species of a new genus *Latithorax* with descriptions, including *R. monticola* n. sp.; synonymy, data on Scandinavian and total distribution (Greenland, West Spitsbergen) are given as well as discussion of ecology and vertical distribution; all species are native to Swedish Lapland.

**Copy seen:** DA; MH-Z.

**22672. HOLM, BJÖRN.** Gräshopper från Torne Lappmark. (Opuscula entomologica, 1947. Bd. 12, häft. 4, p. 150) **Title tr.:** Grasshoppers from Torne Lappmark.

Contains a report of finding of three grasshoppers, *Mecostethus grossus*, *Chorthippus montanus fennoscandicus* and *Melanoplus frigidus* in various localities in Torne Lappmark, Sweden.

**Copy seen:** DA; MH-Z.

**22673. HOLM, BJÖRN.** Insektnotiser från Norrbotten. (Opuscula entomologica, 1949. Bd. 14, no. 2-3, p. 120) **Title tr.:** Notes on insects from Norrbotten.

Contains notes on four species new to orthopterous fauna of Norrbotten. Summary in German.

**Copy seen:** DA; MH-Z.

**22674. HOLM, LENNART.** Taxonomical notes on Ascomycetes II. The herbicolous Swedish species of the genus *Leptosphaeria* Ces. et De Not. (Svensk botanisk tidskrift, 1952. Bd. 46, häft. 1, p. 18-46, illus.)

Contains a survey of the herbicolous species of the fungal genus *Leptosphaeria* hitherto found in Sweden, with a determinative key, some notes on occurrence and habitat of 62 species, including nine native to Swedish Lapland and Norrbotten, together with a few remarks on characters of diagnostic value; based primarily on the collections of Naturhistoriska Riksmuseet in Stockholm and the Botanical Museum of the University of Uppsala.

**22675. HOLMBERG, HENRIK JOHAN, 1818-1864.** Ethnographische Skizzen über die Völker des russischen Amerika. Helsingfors, Gedruckt bei H. C. Friis, 1856-63. 2 pt. (Finska vetenskaps-societeten. Acta, v. 4, p. 281-421, fold. map; v. 7, p. 35-101) **Title tr.:** Ethnographic sketches of the peoples of Russian America.

Ethnological and historical study based

chiefly on printed Russian sources and on author's (a Finnish naturalist) own observations during his stay at Sitka, Kodiak and other places in 1850-51. Pt. 1 contains an ethnological study of the Tlingit Indians and South Alaskan Eskimos (Koniaks). Division of the natives of Russian America into four main "national" groups, Tlingits, Eskimos ("Konjagen"), Tanaina ("Thaina") and Aleuts, and their subdivision into tribes, p. 3-8. Description of the Tlingits (p. 9-74): their name in Russian (Kalúshi or Koloshi) and in English (Tlingits); division into clans and families and social differentiation; physical characteristics, clothing, adornments, semi-nomadic way of life, dwellings and inhabited places; canoes, implements and use of iron, arts; fishing and hunting; customs, marriage, social condition of women; hostilities; burials, feasts, slavery; religion and myths, especially Jeshl-myth, shamanism and sorcery; description of the Eskimo natives of Kodiak and adjacent islands (p. 77-141): statistical data on population, social differentiation, physical characteristics, tattooing, clothing; food, inhabited places and dwellings, equipment, kayaks and implements, handicraft, fishing, whaling and hunting, family relations, former polygamy, social position of women, burials, gambling, feasts, native stories about first encounters with Russians, remnants of old mythology.

Part 2, bearing subtitle: Entwicklung der Russisch-Amerikanischen Compagnie.—Miscellen (Development of the Russian American Company—Miscellanies), contains a history of the Russian colonization of America, in two periods: (1) 1741-1784, from the last journey of Bering till the settlement of G. S. Shelikhov on Kodiak Island, gives a summary of Russian discoveries in America, first Russian settlements, relations with natives, p. 39-51; (2) 1784-1818, the development of the Russian American Co. under G. S. Shelikhov and A. A. Baranov, a survey of Russian colonization in America, administration, missionary work, commerce, relations with the natives, with stress on the struggle of Aleuts and Tlingits against Russian colonization, p. 51-75. Miscellanies include two stories characterizing the psychology of the Tlingits, p. 76-80. Bibliographical footnotes in both parts. Map (fold.) of Russian possessions in America, indicates areas inhabited by various native groups.

Detailed description of the geology and discussion of origin of copper ore-bearing eruptives in this district in northern Norway at 67°10' N. and just east of 5°30' E. "The formation consists of metamorphosed Cambrian and Silurian schists, traversed conformably to their strike and dip by a series of eruptive rocks, ranging from granite to gabbro, the ore occurrence being especially associated with the latter, metamorphosed by pressure to amphibolite and chlorite." Bibliography (46 items). Summary in English, p. 44-47. *Copy seen*: DGS.

**22692. HOLTEDAHL, OLAF, 1885-** . On the Caledonides of Norway, with some scattered local observations. Oslo, J. Dybwad, 1944. 31 p. illus., map. (Norske videnskaps-akademi, Oslo. 1. Matematisk-naturvidenskapelig klasse. Skrifter, 1944. Bd. 1, no. 4)

*Contains* a study of the true character and genesis of gneiss and granite masses of the northwestern areas of Norway, with data on distribution of pre-Devonian rocks folded during Caledonian time (see map). The granite and gneiss area of Tromsø and Lofoten - Vesteraalen group is included, also sedimentary beds of the Nordland mica-schist-marble series. Some local observations are made on occurrence of tillite in Magerøy in Finnmark. Bibliography (63 items).

*Copy seen*: MH-Z.

**22693. HOLTEDAHL, OLAF, 1885-** . Supposed marginal fault lines in the shelf area off some high northern lands. (Geological Society of America. Bulletin, May 1950. v. 61, p. 493-500, incl. 4 p. diagrs.)

"Studies of the shelf topography off Norway [including Tromsø] indicate that the high northwestern part of the Scandinavian Peninsula is bordered by fractures along which dislocations probably took place during the Tertiary uplift of the land mass . . . Attention is drawn to the fact that similar relief features are characteristic also of shelf areas off West Greenland and Labrador."—Author's abstract. *Copy seen*: DGS.

**22694. HOLTVED, ERIK, 1899-** . Eskimokunst. Eskimo art, with an English summary by the author. København, Foreningen for ung dansk kunst, 1947. 64 p. (p. 33-64 plates). (Alverdens kunst, 4)

Discussion of Eskimo art as "applied art," connected with implements, hunting gear, household articles, clothing, toys, or ceremonial objects. Tradition in motifs and style of ornamentation is noted, as well as white man's influence, introducing new materials (glass beads), new motifs and pictorial art. Plates show examples of Eskimo art from Greenland, Canada and Alaska. Summary in English, p. 29-31. *Copy seen*: DLC.

**22695. HOLTVED, ERIK, 1899-** . The Polar Eskimos, language and folklore. I. Texts. København. C. A. Reitzels forlag, 1951. 367 p., 5 illus. (Meddelelser om Grønland, Bd. 152, nr. 1)

*Contains* text (in vernacular with interlinear English translation) of 178 myths, legends, etc., collected by the author during his sojourns in Thule District 1935-37 and 1946-47. Following an introduction in which the author describes method of transcription, the Eskimo narrators (with photographs), phonetics and translation, the texts are grouped: myths and legends of origin; fabulous beings; epics, fairy tales, songs for children, animal tales, and (100) historical legends.

**22700. HOMULOS, S.** Safety and mine rescue training in the Northwest Territories. (Canadian mining and metallurgical bulletin, Mar. 1952. v. 45, no. 479, p. 168-70, illus.)

Contains a survey of mining administration districts, and of the organizations responsible for safety and rescue work: the federal Dept. of Resources and Development inspectorate, the Mine safety committees, and the Northwest Territories safety council. The aims, equipment and training program for mine safety are described, specifically in Yellowknife district. **Copy seen:** DGS.

**22701. HONIGMANN, JOHN JOSEPH, 1914- .** An episode in the administration of the Great Whale River Eskimo. (Human organization, summer 1951. v. 10, no. 2, p. 5-14, tables)

Contains a record and analysis of responses of an Eskimo group (about 190 persons on southeast coast of Hudson Bay) to a government order of 1949, carrying the customary issuance of sugar and flour to eligible families. This and distribution of ammunition was done to induce the natives to increase their natural food supply. The consequences of these measures, including altered technological and diet patterns, changes of interpersonal relations among the natives, and in Eskimo-White dealings, are explored. Author concludes that local game supply can only be substantially increased if motorized boats and more efficient weapons are supplied to the Eskimos and that administration requires more exact knowledge of Eskimo way of thinking. **Copy seen:** CaMAI.

**22702. HONIGMANN, JOHN JOSEPH, 1914- .** Witch-fear in post-contact Kaska society. (American anthropolo-

gist, Apr.-June, 1947. v. 49, no. 3, p. 222-43, sketch map)

Study of witch-hunting (with torture or killing) among the Athabaskan group (about 200 in number) in the Liard-Francis-Dease River area of Yukon Territory. Author outlines the geographic distribution of the group, history of its contacts with white traders, missionaries and settlers; presents data on witch-fear (distinguishing witches and shamans), torture and murder of alleged witches, especially children; analyses the data to show that witch-fear among these Indians results from social stress induced by introduction of new illnesses, dispersal of game, increased problems of adaptation and growing domination of white people. Comparative references are made to neighboring Athabaskan groups and to other societies manifesting similar reactions to devastating effects of acculturation. Bibliography (43 items). **Copy seen:** DLC.

**22703. HOOPER, F. C.** A new method for heating buildings in the North. (Arctic circular, Mar. 1952. v. 5, no. 3, p. 29-32)

Contains a simple description of a "heat-pump," a device suggested by Dr. Misener for heating in the Arctic, which can cut fuel-oil consumption to less than half that required by conventional heating units. The principles on which the machine operates are outlined, and its performance described. A pilot model built at the University of Toronto has been tested for three seasons at Churchill. Its fuel economy, reduced fire hazard, and adaptation to supply electricity and water are noted. **Copy seen:** DLC.

**22705. HOPKINS, DAVID MOODY,** 1921- . Age of the Denbigh flint complex. (Science, Nov. 7, 1952. v. 116, no. 3019, p. 513)

Contains a preliminary notice on geologic investigations at Iyatayet (on the west coast of Cape Denbigh, 115 miles east of Nome), the site of J. L. Giddings' excavations and discovery of the Denbigh flint complex, the oldest, well-known

cultural horizon in Alaska. Various types of evidence indicate that the people of this complex occupied the place during a warm interval, preceeded and followed by a climate colder than the present, some 8,500 or even 10,000 years ago. The age of three sites in the Brooks Range where Denbigh flint complex material has been collected, is also discussed. Bibliography (6 items).

*Copy seen:* DLC.

**22706. HOPKINS, DAVID MOODY, 1921-**, and **R. S. SIGAFOOS.** Frost action and vegetation patterns on Seward Peninsula, Alaska . . . A study of the geomorphic significance of vegetation patterns as related to frost action at high latitudes and in areas of perennially frozen ground. Washington, U. S. Govt. Print. Off., 1951. iii, 51-100 p., 1 l., illus. (incl. sketch map) 2 plates, diagrs. (U. S. Geological Survey. Bulletin 974-C; Contributions to general geology, 1950)

Contains a characterization of climate on Seward Peninsula, some definitions of vegetation and cryopedologic terms, notes on topography, drainage, geology, soils, permafrost, frost action, and congeliturbation (processes resulting in churning or stirring of the soil), and a study of frost scars, peat rings, tussock rings and groups, and tussock-birch-heath polygons in the Imuruk Lake region. "Frost scars, peat rings, tussock rings, tussock groups and tussock-birch-heath polygons are characteristic of permafrost areas where silty mineral soil is present beneath a cover of peat or turf less than 3 ft. thick. Frost scars on areas of bare soil resulting from disruption of the vegetable cover by local frost heaving. Peat rings, tussock rings and tussock groups consist of vegetation patterns associated with widely spaced mounds of mineral soil separated by channels filled with peat. These rings and groups represent stages in several developmental series all of which start with frost scars as initial form. The final features of these series are the results of frost churning. Vegetation in these areas represent an equilibrium assemblage adjusted to the climate in which it exists. The bare areas covered by pioneer plants are intimately mixed among areas covered by assemblages representing the highest stage in succession. Recognition on aerial photographs of cryopedological features will assist in the interpretation of terrain conditions."—SIPRE. Bibliography (33

items). An abstract of this paper was published in Geological Society of America. *Bulletin*, Dec. 1950. v. 6, p. 1471. For a criticism, see S. Taber *Geology, soil mechanics and botany*, 1952.

**22711. HORVATH, STEVEN MICHAEL, 1911-**, and others. Acclimatization to extreme cold. (American journal of physiology, July 1947. v. 150, p. 99-108) *Other authors:* A. Freedman and H. Golden.

Metabolic observations on five subjects under laboratory experimentation; no changes in basal values of heart rate or rectal temperature occurred; caloric expenditures were higher during exposure to low temperature; discussion of a case exhibiting different reactions; bibliography (16 items). *Copy seen:* DLC.

**22712. HORVATH, STEVEN MICHAEL, 1911-**, and H. GOLDEN. Observations on men performing a standard amount of work in low ambient temperatures. (Journal of clinical investigation, Mar. 1947. v. 26, p. 311-19, 4 fig.)

*Contains* a study of responses of men working at temperatures as low as  $-46.7^{\circ}$  C. in light and heavy clothing (components of the "arctic uniform" are specified). The energy expenditure for the standard work done increased by some 10 per cent at lower temperatures, independently of the amount of clothing worn. Ability and efficiency of work were not significantly impaired even at the lowest

ambient temperature. Loss of body heat was larger in light dress and directly related to ambient temperature. Heat debts were less, but variable, in heavy clothing; in all cases they were accumulated in the early phase of exposure to cold. Bibliography (6 items).

*Copy seen:* DLC.

**22713. HORVATH, STEVEN MICHAEL, 1911-**, and others. Reactions of men exposed to cold and wind. (American journal of physiology, Feb. 1948. v. 152, p. 242-49, 4 fig.)

*Contains* a study on men dressed in standard arctic clothing, exposed to a temperature of  $23^{\circ}$  C. and wind velocities of 0, 5, and 9.6 mph. Skin and rectal temperatures, oxygen consumption, insulative value of the clothing; effect of wind on the cooling rate of the body were measured and subjective responses recorded. Bibliography (6 items).

**22720. HOUSTON, JAMES A.** Eskimo handicrafts. Montreal, Canadian Handicrafts Guild, 1951. 30, [2] p., illus. Written and illustrated by J. A. Houston, the Guild's arctic representative, and translated into Eskimo by Sam Ford and Frederica Woodrow, and published with approval of the Canadian Dept. of Resources and Development, Northwest Territories Branch.

Contains general instructions for Eskimos' guidance in preparing art objects for the white man's market; with (p. 3-30) illustrations and descriptive notes on objects suggested for carving, weaving, sewing, etc. Title and text are given in English and Eskimo. This work is part of a government-sponsored program to develop Eskimo handicrafts for sale in Canada.

**Copy seen:** CaMAI.

**22721. HOUSTON, JAMES A.** Eskimo sculptors. (Beaver, June 1951. Outfit 282, no. 1, p. 34-39, illus.)

Illustrations of soapstone carvings made by Labrador Eskimos and marketed through the Canadian Handicrafts Guild, with a brief account of this work.

**Copy seen:** DSI-M.

**22722. HOUSTON, JAMES A.** In search of contemporary Eskimo art. (Canadian art, Spring 1952, v. 9, no. 3, p. 99-104, 8 illus.)

Stone and ivory carving is presented as a skill of most Eskimo hunters of the Canadian Eastern Arctic; absence of warfare, enforced indoor living for long periods, keen observation of animal life aiding development of a general facility and occasionally of striking artistic talent. The primitive tools and methods, the traditional subjects are described, as well as the Eskimo's attitude to his handicraft, and the latter as expression of Eskimo character traits and way of life. The experiment of developing a handicrafts "trade" is outlined, the author having made five trips in the Hudson Bay region collecting over 20,000 objects which have been sold through the Canadian Handicrafts Guild. Author concludes with indication of the efforts to avoid "pitfalls in mass production of this type of art," to maintain essential characteristics of Eskimo art, its traditional theme's, genuine style, and its social function in the native community.

**22723. HOVANITZ, WILLIAM, 1915-** . The biology of *Colias* butterflies, I. The distribution of the North American species. (Wasmann journal of biology, Spring 1950. v. 8, no. 1, p. 49-75, 8 maps) "The first of a series of papers [with] the end in view that final conclusions concerning the nomenclature or evolutionary history of the group will lie, not with preconceived notions, but with the data." Discussion by species (with use of a set of maps) of the distribution on the North American continent, where eight of the species occur in arctic and/or subarctic regions.

*Copy seen:* DSI-M.

**22724. HOVANITZ, WILLIAM, 1915-** . The biology of *Colias* butterflies, II. Parallel geographical variation of dimorphic color phases in North American species. (Wasmann journal of biology, Summer, 1950. v. 8, no. 2, p. 197-219, 6 maps, tables)

Second of a series of papers for which study was carried out with the aid of the Arctic Institute of North America and several other organizations. Eight of the species discussed occur in the arctic and/or subarctic regions of North America. "The relative proportions of the two-color alleles in various populations are not only different but vary from one population to the next in direct correlation with the variation of the general environmental conditions."

*Copy seen:* DSI-M.

**22725. HOVANITZ, WILLIAM, 1915-** . The biology of *Colias* butterflies, III. Variation of adult flight in the Arctic and Subarctic. (Wasmann journal of biology, Spring, 1951. v. 9, no. 1, p. 1-9, diag.)

Because there are more species of *Colias* in arctic than temperate regions of North America, a comparison of flight differences is more effective in the Arctic. Included in this paper are species of central Alaska, Yukon Territory, St. Elias Mts. and the Fort Smith and Yellowknife regions in Mackenzie District; also fragmentary evidence from other arctic localities.

Finnish Lapland. Text by Ilmari Hu-  
stich, edited by Eino Mäkinen. Helsinki,  
Printed by Ab. Tilgmann Oy., 1951. 32  
p., illus. maps.

Sketch of the development of Lapland  
as a tourist area after construction of a  
motor road "the Arctic Highway" from  
Rovaniemi to Iinahamari on the arctic  
coast in 1929; the Winter War 1939-40;  
the German occupation 1941-45, eco-  
nomic boom, and later devastation; post-  
war reconstruction of dwellings, roads,  
power station; economic activities in the  
region: reindeer herding, tourist trade,  
wood industry, gold mining, land culti-  
vation.

Forest-botanical notes from Knob Lake  
area in the interior of Labrador Peninsula.  
(Canada. National Museum. Bulletin  
123, its Annual report for 1949-50, pub.  
1951, p. 166-217, illus., maps, diagrs.)

Contains results of studies made during  
Aug.-Sept. 1948 and supported by the  
National Museum and the Arctic Insti-  
tute of North America. The area  
(around 55° N. 67° W.) lies on the  
northern border of the central watershed  
region of the Labrador interior, situated  
between the taiga proper and forest-  
tundra. The physiography, flora and  
vegetation of the area are characterized,  
the great variation in the latter due to  
topography, stressed and illustrated, tree  
species noted in detail and forest habitats  
(author's main study) analyzed and tabu-  
lated on the basis of 26 sample plots.  
Forest reproduction is discussed, the  
quantity of seedlings noted as satisfactory

in the main but growth retarded by such  
unfavorable factors as poor soil, snow-  
damage, wind exposure, etc. Brief notes  
are given on mountain, bay and lake  
vegetation. A catalog of about 225 vas-  
cular plants is appended (p. 201-216)  
with notes on habitat, locality and date  
collected. Bibliography (33 items).

**22747. HUSTICH, ILMARI, 1911-**.  
Newfoundland-Labrador. (Terra, 1937.  
49:4, p. 186-98, illus.) **Title tr.:** New-  
foundland-Labrador.

Description of the region (along the  
northeast coast and administratively  
part of Newfoundland, as distinct from  
the Quebec-Labrador along the southeast  
(St. Lawrence) coast) on the basis of  
the author's experience in 1937 with the  
Finnish expedition under Tanner; its  
area and population of about 4000,  
comprised of Eskimos, Naskopi and  
Montagnais Indians and white fishermen.  
The forest growth, flora, swamps and

their similarities to those of Fennoscandia are noted, as well as the arctic belt along the coast resulting from influence of the cold Labrador current. Author sketches the Moravian Mission, Hudson's Bay Co. and the Grenfell Mission especially as they affect the development of Labrador. Summary in English.

**22748. HUSTICH, ILMARI, 1911-** . Notes on the coniferous forest and tree limit on the east coast of Newfoundland-Labrador. Helsinki, 1939. 77 p., 16 illus., map, diagrs. (Acta geographica, 7:1)

Based on the author's observations made in June-Aug. during the Finnish Labrador Expedition, 1937 under leadership of Väinö Tanner. The observations were made principally at Sandwich Bay, Hamilton Inlet, Pottles Bay, and Makkovik missionary station, and on brief landings along the coast as far north as Hebron (58°12' N.). Following notes on the observed coniferous forest limit, is a discussion and tabular data (based on the literature) on climate; descriptions of topography and soil (with notes on the bogs and their vegetation); comparison of the coniferous forest of the east Labrador coast with that of northern Europe, and remarks on the connection between climate and forest line; effects of forest fires; data on former forests and on the economic importance of the coast forest. Bibliography (40 items).

**22749. HUSTICH, ILMARI, 1911-** . Notes on the forests on the east coast of Hudson Bay and James Bay. Helsingfors, 1950. 83 p., illus. (incl. sketch map). (Acta geographica, v. 11, no. 1.)

These notes were made during a canoe journey from Rupert House to Great Whale River, July 7-Aug. 26, 1947, on the Canadian-Finnish Hudson Bay East Coast Expedition, sponsored by the Canadian National Museum and the Arctic Institute of North America. They form an ecologic study of the vascular plants, trees and shrubs of the coast area, and the forest types, reproduction, and growth; and give information on the geographic features of the coast and of the Great Whale River area in particular. Bibliography (36 items).

*Copy seen:* DGS.

**22750. HUSTICH, ILMARI, 1911-** , and B. PETTERSSON. Notes on the

vascular plants of the east coast of Newfoundland-Labrador. I. Preliminary list of plants. II. Notes by I. Hustich on the localities where the plant material was collected in 1937. (Societas pro fauna et flora fennica, Helsingfors. Memoranda, May 8, Dec. 4, 1943. v. 19, p. 192-200; v. 20, p. 24-46, map)

Contains in part 1 list of about 450 plant species (mostly determined by Dr. Pettersson) with indication of localities in which specimens were collected by the three-man Finnish Labrador Expedition of 1937; also a list of the 51 collecting localities along the Labrador coast from Battle Harbour (about 52° N. lat.) northward to Hebron (about 58°12' N. lat.). In pt. 2 Dr. Hustich gives an introductory account of the forest limit along this coast: the vertical and horizontal areas of bush, brushwood and timber forest; and notes climatic and vegetation resemblance with the northern Europe west of the Urals, particularly the Pechora region. Then follow notes on the character of the 51 collecting localities: their situation in relation to coast line (classified as: outlying rocks, coastline, arctic coast, the inland), and forest limits, with mention of the plant species found in each. Bibliography (about 20 items). *Copy seen:* DLC.

**22751. HUSTICH, ILMARI, 1911-** . Om det nordfinska jordbrukets utveckling och årliga produktionsvariationer. Helsinki, 1945. 102 p., 7 maps, 5 diagrs. (Fennia. v. 69, no. 2) *Title tr.:* On the agricultural development in northern Finland, and the yearly variations in production.

Contains a synthesis of biological and geographical information showing the variations in production in a region where these variations are much more important than in the southern part of the country. "Northern Finland" in this paper is the country as it was before 1944. During the last year of the war, the work of scores of years was ruined. The history of agriculture in the region is described in two sections: before and after the hunger years of the 1860's. Chapter 2 gives the history of the extension of cultivated plants in northern Finland, and chap. 3 treats the areal distribution of agricultural land in Lapland. The variations in total agricultural production are discussed for the northern provinces, these variations influenced by many factors other than the climatic

(e. g. economic factors). Chap. 3 is devoted to the *relative* variations of the cereal crops; this gives a more exact measurement of the climatic influence.

**22758. HUTCHISON, DALE H.** A preliminary survey of ice fog in the Alaskan area. Final Report. SRI Project no. 473, Stamford Research Institute, (Contract No. AF19[122]-634) Nov. 1, 1951. 37 p. incl. tables, graphs, appendices A-H.

"Available data on ice fogs in the interior of Alaska have been analyzed for the purpose of establishing the extent and reliability of the data. Preliminary conclusions drawn from these data are presented. Three conditions appear necessary to the formation of ice fogs: a temperature of  $-30^{\circ}$  F or lower, a wind speed of 3 m.p.h. or less, and an adequate supply of water vapor in the air. The available evidence indicates that ice fogs at Ladd Air Force Base and at Eielson Air Force Base result from the addition of water vapor to the air

by the combustion of various fuels when other conditions are favorable. The incidence of ice fogs at Ladd AFB shows no increase from 1946-1951, whereas ice fogs definitely increased in frequency at Eielson AFB. This condition probably reflects the increased activity at Eielson during that period." (Author's abstract).

Über den Fund von *Styela atlantica* (Van Name) an der norwegischen Westküste, mit Bemerkungen über die amphiatlantische Verbreitung einiger Ascidien. (Bergen, Norway. Museum. Aarbok; naturvidenskabelig rekke, 1936, nr. 5, p. 1-18, illus.) **Title tr.:** Notes on ascidians II. On the find of *Styela atlantica* (Van Name) on the western coast of Norway with remarks on amphiatlantic distribution of some ascidians.

Contains a record of the find of this sea squirt on the Norwegian coast, and a discussion of the distribution of some ascidians on both sides of the Atlantic including *Cnemidocarpa rhizopus*, native to Kola Peninsula, Novaya Zemlya, Kara Sea, Svalbard, Greenland and Baffin Island waters. This is a continuation of the item above.

**22765. HYLANDER, NILS, 1904-** . Die Grassameneinkömmlinge schwedischer Parke mit besonderer Berücksichtigung der *Hieracia silvaticiformia*. Uppsala, Lundquistka bokhand., 1943. xiii, 432 p., plates 1-24, text maps. (Symbolae botanicae upsalienses. v. 7, no. 1) **Title tr.:** Immigrant grasses in Swedish parks with special reference to *Hieracia silvaticiformia*.

**Contents tr.:** 1 (p. 1-23) Parks of Swedish villas and estates in the second half of the 19th century and their immigrant grasses (with especial reference to their origin); 2. Origin groups and their individual species. A (p. 24-68) Group 1, the French group (*Bromus erectus* group); B (p. 68-77) Group 2, species of uncertain origin; C (p. 78-287) Group 3, the German group (*Poa chaikii* group); D (p. 288-93) Group 4, the *Festuca capillata* group. Appendix 1 (p. 295-327) Localities of the more commonly found species of groups 1-4; Appendix 2 (p. 330-87) Data on localities in the tables I-II. Literature cited (about 450 items), p. 388-402. Tables I-II, p. 403-432.

Includes (p. 106-274) descriptions of 143 adventive species of composite genus *Hieracium* (group *Hieracia silvaticiformia*) almost all new species, with critical and descriptive notes on 73 other exotic plants growing in Swedish parks; includes *Luzula luzuloides* and *Phyteuma spicata* ssp. *ochroleuca*, native to Swedish Lapland (Asele, Pite and Torne Lappmark).

Contains a study on patients subjected to, mostly unilateral, operations on the sympathetic nervous system and fully exposed to cold air. Skin and mouth temperature, pulse rate and blood pressure, pilomotor activity, shivering and appearance of skin were followed. In-

fluence of sympathectomy on the response of arterials to cold and on pain caused by cold; influence of the sympathetics on capillary dilatation of the hand of the cooled subjects, and the dual mechanism of capillary responses were studied and analyzed. Bibliography (9 items). Part 1 of this study dealt with effects of heating the body.

**22768. ĪĀGODOVSKIĪ, KONSTANTIN PAVLOVICH.** V stranē polunochnogo solntsa: vospominaniā o Murmanskoi ēkspeditsii. S.-Peterburg, Zhizn' i znanie, 1914. xii, 312 p., illus., ports, maps. (Biblioteka dlā ūnoshestva, kn. 13) **Title tr.:** In the land of the midnight sun; memoirs from the Murmansk Expedition.

Well-documented memoirs of the expedition (1898-1908) organized and led by the marine biologist, N. M. Knipovich till 1902, then by L. L. Breitfus. The purpose of this expedition, on which the author was one of the scientific personnel, was biological and oceanographic investigations to further fishing and sealing in Barents Sea. He describes the itinerary to Yekaterinskaya Gavan in Kola Bay where the expedition's station Aleksandrovsk was located; the research vessel *Andreĭ Perozannyĭ*; the harbor, its environs and its marine life; commercial sea fishes; local fisheries; outline of the hydrographic work; animal and plant life of the sea bottom; plankton investigations; whales and whaling; birds; work at the shore-laboratory; notes on reindeer; arctic ice, icebergs and ice conditions;

work on Novaya Zemlya; its inhabitants; animals and plants; studies on Cheskaya Guba; whaling, sealing and hunting in that region; return itinerary.

Contains a general account of the author's trip to Kanin Peninsula in Arkhangel'sk province chiefly to study the social and economic condition of the Samoyeds living in that region; with data on the physical geography of peninsula (especially vegetation) and rather brief notes on the Samoyeds and their mode of life; historical notes on reindeer epidemics and on an attempt at vaccination for anthrax made by the veterinarian, I. M. Sadoyskiĭ (p. 49-57); data on health conditions of the Samoyeds and medical service in the region (p. 58-63); and its mapping (p. 63-67). Author concludes (p. 68-75) offering a summary on the climatic zones, water features, vegetation and forests, reindeer and its diseases, veterinary and medical aid; plight, education and russification of the Samoyeds; maps, roads, etc. Map of the Kanin Peninsula and a list of rivers, rivulets and springs compiled by the forer of the region, D. Z. Trofimenko, completes the paper.

**22800. ILLUSTRATED ARCTIC NEWS.** Facsimile of the Illustrated arctic news, published on board H. M. S. Resolute . . . in search of the expedition under Sir John Franklin . . . Lieut. Sherard Osborn [i. e. Osborn], & Mr. Geo. F. McDougall . . . editors. London, Ackermann & co., 1852. 2 p.l., 57 p. incl. illus. (part col.) col. plates. Text and illus. etc. are lithographed; title vignette in colors.

Printed and published after the expedition's return home, from the five numbers originally issued in ms., Oct. 31, Nov. 30, Dec. 31, 1850, Jan. 31 and Mar. 14, 1951, on shipboard during the wintering of the *Resolute* under Captain H. T. Austin in Barrow Strait near the southern end of Cornwallis Island. The text is made up of notes (mainly humorous) on day-to-day happenings, occupations, and amusements of the winterers, weather, ice, etc. The numerous pencil sketches include a few of coasts and ships, in ice. On p. 2 is an account (and sketch) of graves of seamen from Franklin's last expedition, found on Beechey Island.

A survey with data and statistics on the location and types of trees as they occur naturally, including northern forests in Russia, Norway, Siberia, Sweden, Alaska, Greenland and Finland; with some data and discussion on their exploitation and on rational care of forests. Bibliography (about 120 items). Summary in English, p. 387-407, also English captions on the extensive graphic and tabular data.

**Copy seen:** DLC.

**22803. ILVESSALO, YRJÖ, 1892-** . The forest resources of Finland in 1936-1938. A summary of the main results of the Second National Survey of Forests. Helsinki, 1940. 48 p., maps, tables. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisuja, 28:7) Also published in Finnish: *Suomen metsävarat vu 1936-1938*, as v. 28, no. 6 of the journal noted above, and republished in English as *Fennia* 66:5, 1940.

Brief description of some of the main results of the second national forest survey of Finland 1936-38, presented here by its director because calculation of full results and presentation of main report was prevented by Russo-Finnish war. Author outlines methods in surveying (line-survey and circular sample plots) and calculating (punched card system); gives data on land types and areas; the forest area is divided according to dominant tree species (pine, spruce, birch, aspen) and the four types contrasted as to productivity, soil areas, growth rate, etc. Gives also data on swamps, contrasting swamp types for northern and southern Finland; and data on annual growth of trees.

**Copy seen:** DLC.

**22804. ILVESSALO, YRJÖ, 1892- .** The forests of Finland, the forest resources and the condition of the forests; a paper discussing the main results of the general forest survey. Helsinki, 1924. 40 p., maps, diags., etc., on 10 plates. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisuja, 9:3) Also published in Finnish: *Suomen metsät, metsävarat ja metsien tila*, and in Swedish: *Finlands skogar, skogstillgångarna och skogarens tillstånd*, as no. 1 and 2 respectively in v. 9 of this journal.

Contains preliminary data from the 1921-24 survey results (which were published later as the author's *Suomen metsät*, 1927, q. v.) Here he outlines briefly the scope and method of this survey and (at end) reliability of the results; characterizes four classes of land from viewpoint of potential forest growth and indicates distribution such lands in various provinces, with general comparison of northern and southern sections of the country (64° N. lat. as line of division); gives statistical data on ownership; distribution of forest and swamp lands, composition (tree species), age and growing stock of forest, its merchantable timber and annual growth. As appendix, author outlines forest classification system used in Finland: the forest types (grove, fresh and heath) being characterized by vegetable surface cover (here defined for each type) of the stand at exploitable age.

**Copy seen:** DLC.

**22805. ILVESSALO, YRJÖ, 1892- .** The forests of present-day Finland. Helsinki, 1949. 56 p., 35 illus. incl. plates, diags., maps. (Helsingfors. Metsätieteellinen tutkimuslaitos. Julkaisuja, 35:6) Text is published also in Finnish, *Nyky-Suomen metsät*, 1948, as paper no. 5 in the same volume of this journal.

On the basis of data resulting from the second national forest survey, 1936-38, the author characterizes the area covered in the present paper (60°-70° N. lat.); the volume of growing stock, annual growth and treatment of the forests; silvicultural condition; ownership; felling and utilization of the wood, etc.; with comparative data for the northern and southern parts of Finland.

"The Finnish doctrine of winter warfare tactics (*motti*) is divided into three phases: reconnaissance and stopping, attack and cutting, and isolation and annihilation. The principal condition necessary for the success of *motti* tactics is the ability to operate under adverse terrain and weather conditions, including deep snow and extreme cold."—SIPRE. **Copy seen:** DLC.

**22821. INGSTAD, HELGE MARCUS, 1899-** Nunamiut, blant Alaskas innlands-eskimoer. Oslo, Gyldendal, 1951. 334 p. illus., ports., fold. col. map) **Title tr.:** Nunamiut; among the inland Eskimo of Alaska.

Contains narrative of the author's journey during 1949-50, among north Alaskan Eskimos living in the region of Anaktuvuk Pass, Brooks Range. The Nunamiuts comprise two groups: the Tulugarmiut and the Kilik, together 13 families, in all 65 individuals in 1949. They are caribou hunters and now inland-dwelling (most of the present children

had never seen the ocean). But caribou being few in the usual hunting grounds, they had lived during 1918-1938 on the coast near the Yukon border, where they learned to hunt seal and white fox. In recent years the Nunamiuts have discontinued the yearly spring-time voyage to the mouth of the Colville River, where they used to trade with Eskimos from Barrow. A few times every year their camps are visited by aircraft from Fairbanks, bringing supplies: ammunition, tobacco, coffee, knives, cooking utensils, etc., and taking wolfskins in exchange. Their culture is thus almost wholly like that of their predecessors: based on the caribou, from which they get food, clothing, tents, thread, etc. They move as the caribou moves, when the herds are large, they flourish, when scarce they suffer famine in all essentials. The work is extensively illustrated with photographs of the people and of their equipment, also sketches by the Eskimo, Paneaq, who helped the author with the language and hunting techniques, as well as with the history, songs and myths of his people. The ethnological collections made during this sojourn are to be worked up for separate publication. This group of people has also been described by Dr. R. L. Rausch q. v.

**22835. IRVING, LAURENCE.** Climatic adaptation in arctic and tropic animals. (U. S. Public Health Service. Public health reports, 1951. v. 66, no. 29, p. 939-41)

*Contains* a general discussion of cold adaptation in arctic and tropical mammals (in part summarizing results of experimentation in the Arctic Research Laboratory at Point Barrow). Metabolism increase due to drop in temperature was found in many tropical animals but not in arctic forms where insulation appears to be the only protective factor against cold in animals weighing 5 kg. and over. The complexity of physical and physiological devices designated as "insulation" is suggested.

*Copy seen:* DLC.

**22836. IRVING, LAURENCE.** Physiological adaptation to cold in arctic and tropic animals. (Federation proceedings, June 1951. v. 10, no. 2, p. 543-45)

"Certain physiological systems are arranged in arctic animals for the conservation of heat; thus the metabolic costs of living in low temperature are apparently held down to about the same basal level of energy expenditure as is found in warmer climates." Devices possessed by arctic animals and deficient in tropic forms, which obviously serve to conserve heat, author terms adaptive. He gives a general account of body temperature measurements made mainly in the Point Barrow region of Northern Alaska, on reindeer, dog, fox, porcupine, etc., in cold arctic weather. The animals' metabolism; the insulatory effect of fur, surface skin and subcutaneous temperature; temperature of legs and hoofs, etc., are discussed, with suggestion that "certain tissues of warm-blooded animals in the Arctic have . . . a sort of chemical adaptation of their substances to suit them for operation at temperatures lower than that of the mammalian body." Bibliography (4 items).

**22840. IRWIN, EVERETT,** and others. Ascorbic acid content of adrenal glands of young albino rats after cold and other stresses. (Endocrinology, June 1950. v. 46, p. 526-35, 3 fig., table) *Other authors:*

A. R. Buchanan, B. B. Longwell, D. E. Holtkamp, and R. M. Hill.

Contains a study of 13-, 32-, and 50-day-old rats. Depletion of adrenal ascorbic acid through hypothermia was not elicited in the 13-day-old group, in control to the older groups; a variety of other stresses caused a depletion in the 13-day-old as well as in the other animals. The failure of cold to produce a depletion of adrenal ascorbic acid (and adequate thermo-regulation) in the infant rats is therefore attributed to immaturity of some part in the thermoregulatory mechanism, between the cold receptor and the adrenals, and/or to depression of the body temperature below the level essential to enzymatic reactions involved in the production of corticosteroids. Bibliography (15 items).

**22863. ITKONEN, TOIVO IMMANUEL, 1891-** . Die Spiele, Unterhaltungen und Kraftproben der Lappen. (Suomalais-ugrilainen seura. Aikakauskirja, 1941, v. 51, no. 4, p. 1-133, 38 illus.) **Title tr.:** Games, amusements and contests among the Lapps.

Contains well documented and annotated description of some 110 games for children and adults, used indoors and out; also chapters on contests between magicians, on popular musical instruments, the singing of juoigos, and the telling of tales, legends and riddles. The games are grouped as follows: children's toys;

games on ice and snow; play in imitation of social customs; throwing games (balls, arrows); mechanical toys; contests of strength, and of skill (dice, boards, cards, guessing games, etc.). About 40 per cent of these games are of native origin, the rest are borrowed from neighbors. Children's toys and games and sport (e. g. lassoing) are expected to train them for adult life.

**22864. ITKONEN, TOIVO IMMANUEL, 1891-** . Ueber die lappischen Masseinheiten. (Finnisch-ugrische Forschungen, 1946. Bd. 29, p. 52-68) **Title tr.:** On the Lapp units of measurement.

In the old measuring systems of all the peoples the members of the human body played an important rôle as units of length. The Lapps have their own system of measurement for length only; those for space and weight, having been borrowed mostly from neighbors. The units for length are: a finger width, a thumb length, a palm width, the span, etc. Measurement of distance: how far a stick or a stone can be thrown by man, the distance of a shot, how far a man can see, or how far the cry of a man (or barking of a dog) can be heard, the distance of a day's travel (about 30 km. in summer and 60 km. in winter), etc. For space: big as a blueberry, or the top of a finger, as much as a mouthful of brandy, or a handful of salt; as large as a child's (or adult's) head. For weight: as much as a man (or a reindeer) can carry, a sledge load. An axe with a handle can be used as scales. A wooden stick (*tsukke*) is used as a tally for reindeer; different words are used for herds of less, or more than a thousand head. Debt is marked on a stick which is divided in two: one part kept by the debtor, the other by the creditor. Furs are counted in units of forty (in Lule Lappmark, Sweden).

**22865. ITKONEN, TOIVO IMMANUEL, 1891-** . Ueber die Wurfscähle der Lappen. (Finnisch-ugrische Forschungen, 1939-40. Bd. 26, p. 217-47, 18 illus.) **Title tr.:** On the Lapp lasso.

An important ethnological essay. Reindeer husbandry would be almost impossible without the lasso (*suoppa*) which consists of a rope with a ring at its end. It is made by women and used not only to catch reindeer, but also for bear hunting and (a smaller one) for catching birds.

Two techniques of lassoing (for long and short distance) are practiced by the Lapps with almost unbelievable precision, short-distance lassoing by women as well as men. Lapp children begin playing with a lasso at a very early age and learn its use. At eleven years the boy is given one of adult type of his own. This paper gives a very detailed description of how the lasso is made and different techniques of its use. In Fennoscandia it is a genuine Lapp invention. The Samoyeds have a similar one, of which two specimens are described. Author suggests that the lasso was probably invented before reindeer was domesticated and was used for hunting them wild.

*Contains* description of Ob'-Ugrian ornaments which are divided into five types and compared with ornaments of other Finno-Ugrian peoples and Samoyeds. Some ornaments are several hundred years old and have wide dissemination. The prevailing designs are geometric, but motifs from nature (birds, trees, etc.) are also represented.

**Copy seen:** DLC.

**22888. IVANOV, S. V.** Medved' v religioznom i dekorativnom iskusstve narodnostei Amura. (In: Akademiia nauk SSSR. Institut étnografii. Pamiat V. G. Bogoraza 1865-1936, pub. 1937, p. 1-44) *Title tr.:* The bear in the religious and decorative art of Amur peoples.

The Gilyaks, Ulchis, and Goldis have in their wood sculptures the most extensive art representations of the bear among all the peoples of northern Eurasia. These depict spirits of (a) hosts of places, and bears who promote hunting, and fishing, (b) patrons and helpers of shamans, and (c) diseases. A concise description of bear festivals is included, with emphasis on their matriarchal origin. On ritual dishes, circumstances of bear killing are depicted. Also the interlaced spiral-ribbon ornamentation on wood and bone originates in a pictographic representation of a bear bound to a post ready for killing at the end of the feast. The Amur nationalities have four kinds of such "bear carving" ornaments.

Trudy antropologicheskago otdiela, t. 22) *Title tr.:* On the anthropological composition of inhabitants of Russia.

Contains description of peoples living in the Russian Empire, based on author's field work (in Caucasus, 1893-96) and material from other investigators or the literature. The work is divided into chapters according to the features of the human body (color of hair and eyes, stature, head index, etc.) and includes scores of anthropological measurements. In the final chapter the author tries to give an anthropological classification of Russia's inhabitants, and briefly characterizes several ethnic types, among them the Zyryans (p. 200), Lapps (p. 201), and Yakuts (p. 209-210); the Samoyeds are classified with the Mongolic group and Ostyaks considered as a genuine type. An extensive bibliography includes (among others) anthropological works on the Voguls, Zyryans, Kamchadals, Lapps, Ostyaks, Samoyeds, Soyots, Telengits

(i. e. Teleuts or Kara-Kalmucks), Tungus, Finns, Chukchis, and Yakuts.

**22908. JACOBSEN, A.** Litt om selfangsten og dens framtid. (Polarboken, 1949, p. 58-64). **Title tr.:** Some facts about sealing and its future.

**An** historical survey of sealing from the 18th century to World War II is presented. During 1921-30, the Russians caught 1,152,650 seals and the Norwegians 1,824,950 seals. In 1946, 26,912 animals (mostly seals) were brought to Tromsø; these yielded 11,476 pelts. In 1948, the number rose to 114,566 with a yield of 24,491 pelts. The Jan Mayen seals are still under protection, but a limited exploitation of the sealing possibilities there should be permitted in the near future. The Newfoundland and Labrador fields can be expanded, but their possibilities are by no means unlimited. The formation of a seal council is suggested to further the protection of the world's seal supply.

**Contains** an account of the salient meteorologic, oceanographic, and geographic features of the arctic regions

which combine to produce the various types of sea ice and control their occurrence and distribution in the Arctic. Includes a survey of regional ice conditions along the Northeast and Northwest Passages and subsidiary routes, and brief remarks on the present-day research and ice scouting being carried out by various countries. Bibliography (42 items). **Copy seen:** DGS.

**22910. JACOBSEN, N. KINGO, and P. P. SVEISTRUP.** Erhverv og kultur langs Polarkredsen. København, Munksgaard, 1950. 140 p. illus. maps. (Grønlandske selskab) **Title tr.:** Trade and culture along the Arctic Circle.

*Contains a summary of economic and cultural conditions in the polar region (excepting Greenland, not described because of the already numerous publications in Danish on conditions there). Chapter 1 describes the relations between Europeans and Eskimos in Labrador; chap. 2, the economic and cultural conditions of the Canadian Eskimos, and chap. 3 those of the Eskimos of Alaska. Chap. 4 treats the material culture of the peoples of the arctic regions of the U.S.S.R. Finally the fisheries of northern Norway are described in chapter 5.*

**22913. JÄÄSKELÄINEN, VILJO.** Kuorjätteiden osallisuus erään tulva-  
saaren muodostumiseen Kemijoen.  
(Terra, 1924. v. 36, no. 2-3, p. 158-65,

illus., diagrs.) **Title tr.:** The role of bark and wood remains in the formation of alluvial flood islands in the Kemi River.

*Contains data on the building-up of three islands in the Kemi River (flowing west and south into Gulf of Bothnia at 65°47'N. 24°30'E.). Excavations showed alternate layers of sand and bark, the latter having a large share in the islands' development. This waste material was carried downstream largely from logging and paper-making operations in the river's upper reaches.*

**22914. JÄNTTI, AUGUST.** Suomen laidunolot. Helsinki, 1947. 255 p., maps, tables, diagrs. (Acta forestalia fennica, v. 53, no. 2) **Title tr.:** Pasture conditions in Finland.

*Contains a report on the first investigation of this kind made in 1938 and based on uniform, primary statistical material. Consecutive sections deal with: method of the investigation; area of various kinds of pastures; intensity of pastures and pasture; the total grazing time and its distribution over the various kinds of pastures; distribution of grazing time according to the various kinds of animals; pasturage supplied from the farms' own resources; fences, etc. The study includes Finnish Lapland. Bibliography (over 120 items). Summary in German.*

**22918. JÄRVINEN, A. E.** Perä-Pohjolan metsien tulevaisuus. (Metsä-taloudellinen aikakauslehti (Finska forstföreningen), 1951. v. 6, p. 177-80) **Title tr.:** The future of the forests in the far North.

Describes the condition and current utilization of the forests of northern Finland in comparison with those of other sections of the country. Noting the relatively high proportion of virgin forest in the North, author suggests immediate and fuller exploitation of resources there to prevent further loss by trees dying from over-age. The main deterrent from utilization of northern forests by the logging industry, is the difficulty of transport to industrial centers.
